

Contents

Preface x

To the Student xiii

Chapter One

Sets and Logic 1

- 1.1 The Concept of a Set
- 1.2 Specifying Sets and Membership in Sets
- 1.3 Set Equality and Subsets
- 1.4 Set Algebra
- 1.5 Cartesian Product
- 1.6 Applications to Logic

Chapter Two

Functions, Relations, and Systems
of Linear Equations 32

- 2.1 Linear Functions
- 2.2 Functions and Set Terminology
- 2.3 Relations
- 2.4 Systems of Linear Equations

<i>Chapter Three</i>	
Nonlinear and Multivariate Functions	74
3.1	The Quadratic Function
3.2	The Exponential Function
3.3	Multivariate Functions
<i>Chapter Four</i>	
Fundamental Rules for Counting	107
4.1	A Fundamental Rule for Counting
4.2	Permutations
4.3	Combinations
4.4	The Binomial Theorem
<i>Chapter Five</i>	
Probability	139
5.1	Sample Space
5.2	Subsets of a Sample Space: Events
5.3	Assigning Probabilities
5.4	Joint, Marginal, and Conditional Probability
<i>Chapter Six</i>	
Probability Functions	174
6.1	Random Variables
6.2	Probability Functions
6.3	Measures of Central Tendency and Variability
6.4	Two Important Discrete Distributions
6.5	The Normal Distribution

Chapter Seven

Selected Topics in Probability and Statistics 211

- 7.1 Chebyshev's Inequality
- 7.2 Sampling and Sample Statistics
- 7.3 The Central Limit Theorem
- 7.4 Estimating Population Parameters
- 7.5 Tests of Hypotheses

Chapter Nine

Matrices and Matrix Algebra 271

- 9.1 Vectors
- 9.2 Vector Algebra
- 9.3 Matrices
- 9.4 Matrix Algebra
- 9.5 Matrix Representation of Systems of Linear Equations
- 9.6 The Inverse: Gaussian Method

Chapter Eight

Introduction to Decision Theory 244

- 8.1 Conditions under Which Decisions Are Made
- 8.2 Commonly Used Decision Criteria
- 8.3 The Value of Information
- 8.4 Incremental Analysis

Chapter Ten

Markov Chains 306

- 10.1 An Example
- 10.2 Notation and Terminology
- 10.3 k -Step Transition Matrix
- 10.4 Steady State Probabilities
- 10.5 Absorbing Markov Chains

*Chapter Eleven***Linear Programming 337**

- 11.1 The Linear Programming Problem
- 11.2 Graphical Solution
- 11.3 Assumptions, Terminology, and Special Cases
- 11.4 Applications of Linear Programming

*Chapter Twelve***The Simplex Method 376**

- 12.1 Systems of Equations
- 12.2 The Simplex Algorithm
- 12.3 Minimization
- 12.4 Special Cases

*Chapter Thirteen***The Transportation and Assignment Problems 414**

- 13.1 The Transportation Problem
- 13.2 The Initial Basic Feasible Solution
- 13.3 The Stepping Stone Algorithm
- 13.4 The Assignment Problem
- 13.5 The Assignment Algorithm

*Chapter Fourteen***Mathematics of Finance 454**

- 14.1 Simple and Compound Interest
- 14.2 Compound Amount and Present Value Formulas
- 14.3 Annuity

*Appendix***Logarithms: Laws of Exponents 474**

Tables	483
A.1	Values of $(1 + i)^n$
A.2	Values of $(1 + i)^{-n}$
A.3	Values of $[(1 + i)^{-n} - 1]/i$
A.4	Values of $[1 - (1 + i)^{-n}] / i$
A.5	Common Logarithms
A.6	Natural or Naperian Logarithms
A.7	Exponential Functions
A.8	Squares and Square Roots
A.9	Binomial Distribution
A.10	Standard Normal Cumulative Distribution

Selected Answers to Problems	519
------------------------------	-----

Index	541
-------	-----
