

Table of Contents

1	Preface	1
	Notation	5
2	Conjugate Gradient Type Methods	7
2.1	Krylov subspace methods	7
2.2	Two particular conjugate gradient type methods	12
—	The minimal residual method (MR)	12
—	The conjugate gradient method (CG)	14
2.3	Conjugate gradient type methods using TT^*	15
—	CG applied to the normal equation (CGNE)	16
—	The minimal error method (CGME)	18
2.4	Basic relations between conjugate gradient type methods	18
2.5	Implementing both MR and CG in one scheme	22
2.6	Stability issues	27
	Notes and remarks	33
3	Regularizing Properties of MR and CGNE	35
3.1	Monotonicity, convergence and divergence	35
3.2	Convergence rate estimates	39
3.3	The discrepancy principle	45
3.4	A heuristic stopping rule	50
	Notes and remarks	55
4	Regularizing Properties of CG and CGME	57
4.1	Monotonicity, convergence and divergence	57
4.2	Failure of the discrepancy principle: a counterexample	60
4.3	An order-optimal stopping rule	66
4.4	A heuristic stopping rule	68
	Notes and remarks	71
5	On the Number of Iterations	73
5.1	General estimates for the stopping index	73
5.2	The counterexample revisited	77
5.3	An application: image reconstruction	82
	Notes and remarks	90

6	A Minimal Residual Method for Indefinite Problems	91
6.1	MR-II, a variant of MR	91
6.2	On the zeros of the residual polynomials	97
6.3	Convergence and divergence	100
6.4	Stopping rules for MR-II	106
6.5	Estimates for the stopping index	115
6.6	The image reconstruction problem	118
6.7	The sideways heat equation	120
	Notes and remarks	126
	References	127
	Index	133
