PART 1

1	The Program of Catastrophe Theory	3
2	The Local Character of Potentials	6
1	The Implicit Function Form	6
2	The Morse Forms	9
3	The Thom Forms	9
4	Neighborhoods of Validity	11
5	Catastrophe Functions	12
6	Summary	13
3	Change of Variables. 1 Canonical Forms	15
1	Change of Variables	16
2	Application 1: The Implicit Function Theorem	20
3	Application 2: The Morse Lemma	20
4	Application 3: The Splitting Lemma	23
5	Application 4: $l = 1$ (One Vanishing Eigenvalue)	26
6	Application 5: $l = 2$ (Two Vanishing Eigenvalues)	27
7	Application 6: $l = 2, k \geq 7$	29
8	Application 7: $l = 3, k \geq 6$	30
9	Application 8. $l \geq 4$	30
10	Summary	32

4	Change of Variables. 2 Perturbations	33
1	Perturbations	34
2	Application 1: The Implicit Function Form	35
3	Application 2: The Morse Forms	36
4	Application 3: The Splitting Lemma Form	41
5	Application 4: Perturbation of $\pm x^n$	42
6	Application 5: Perturbation of $x^2y \pm y^k$	45
7	Application 6: Perturbation of $x^3 \pm y^4$	47
8	Summary	48
5	The “Crowbar Principle”	51
1	The “Crowbar Principle” for a Potential	52
2	The “Crowbar Principle” for a Family of Potentials	56
3	Example 1: Control Space of A_2	58
4	Example 2: Control Space of A_3	59
5	Example 3: Control Space of A_4	62
6	Example 4: Control Space of D_{+4}	66
7	Example 5: Control Space of D_{-4}	78
8	The Bifurcation Set and the Maxwell Set	89
9	The Clausius-Clapeyron Equations	89
10	Summary	92
6	Geometry of the Fold and the Cusp	94
1	Geometry of the Fold (A_2)	94
2	Geometry of the Cusp (A_{+3})	97
3	Geometry of the Dual Cusp (A_{-3})	105
4	Summary	105
7	Catastrophe Organization	107
1	$A_{k+1} \rightarrow A_k$	108
2	$D_{k+1} \rightarrow D_k$	110

3	Diagrammatic Representations: $l = 1$	111
4	Diagrammatic Representations: $l = 2$	118
5	Contour Representations	132
6	Abutment	135
7	Summary	139
8	Catastrophe Conventions	141
1	The Need for Conventions	141
2	The Conventions	142
3	Which Convention to Use	146
4	The Inadequacy of Conventions	154
5	Summary	155
9	Catastrophe Flags	157
1	Modality	158
2	Inaccessibility	158
3	Sudden Jumps	159
4	Divergence	160
5	Hysteresis	161
6	Divergence of Linear Response	162
7	Critical Slowing Down/Mode Softening	166
8	Anomalous Variance	170
9	Summary	182
 PART 2		
10	Thermodynamics	187
1	General Description of Phase Transitions	188
2	Ginzburg–Landau Second-Order Phase Transitions	189
3	Topological Remarks	194
4	Critical Point of a Fluid	199

5	Fluid Equation of State: van der Waals Equation	203
6	Predictions of the van der Waals Equation	206
7	Ginzburg–Landau First-Order Phase Transitions	210
8	Tricritical Points	214
9	Maxwell Set for A_{+5}	220
10	Triple Point	222
11	Catastrophe Topology and Thermodynamics	224
12	Metric Geometry and Thermodynamics	229
13	Thermodynamic Partial Derivatives	235
14	Alternative Variational Representations	240
15	Fluctuations	246
16	Additional Questions	247
17	Summary	250
11	Structural Mechanics	254
1	Systems Governed by a Potential	255
2	Euler Buckling of a Beam	258
3	Collapse of a Shallow Arch	265
4	Exchange of Stability	271
5	Compound Systems	277
6	Engineering Optimization	281
7	Dangers of Engineering Optimization	282
8	Propped Cantiliver. C_{4v}	282
9	Propped Cantilever. C_{3v}	286
10	Mode Softening	292
11	Summary	293
12	Aerodynamics	296
1	Dynamical System Equations	296
2	Truncated Dynamical System Equations	298
3	Linear Stability Analysis	300

4	Description of Aircraft	301
5	Aircraft Equations of Motion	302
6	Steady-State Manifolds	304
7	Application to a Particular Aircraft	305
8	The Bifurcation Set	306
9	Catastrophe Phenomena	308
10	Integration of the Equations of Motion	312
11	Energy as Lyapunov Function	315
12	Summary	317
13	Caustics and Diffraction Patterns	319
1	Geometrical Optics	319
2	Stationary Phase Method	324
3	Degree of a Singularity	326
4	Caustics and Catastrophe Germs	331
5	Diffraction Patterns and Catastrophe Functions	337
6	Summary	342
14	Jordan–Arnol’d Canonical Form	345
1	Program of Catastrophe Theory for Linear Systems	346
2	Perturbation	349
3	Application 1: A_2	355
4	Application 2: A_3	356
5	Application 3: A_k	358
6	Degeneracies in Families of Linear Operators	358
7	Bifurcation Set for Jordan–Arnol’d Canonical Forms	360
8	Summary	365
15	Quantum Mechanics	367
1	The Operators	369
2	The Classical Limit	371

3	Collective Model Hamiltonians	374
4	Algorithm for Ground State Energy Phase Transitions	378
5	Application 1: The MGL Model	379
6	Application 2: The Dicke Model	382
7	Application 3: Extended MGL Models	384
8	Application 4: Extended Dicke Models	387
9	Algorithm for Thermodynamic Phase Transitions	388
10	Application 1: The MGL and Dicke Models	391
11	Application 2: Extended MGL and Dicke Models	394
12	Crossover Theorem	401
13	Structural Stability and Canonical Kernels	404
14	Dynamical Equations of Motion	408
15	Steady States Far from Equilibrium	412
16	Multiple Stability	417
17	Summary	423
16	Climate	428
1	Prologue	428
2	Pacemaker of the Ice Ages	429
3	The Milankovitch Theory	433
4	Test of the Milankovitch Theory	439
5	Connection with Catastrophe Theory	441
6	Reduction to Cusp Form	444
7	Toward a Useful Program	446
8	Epilogue	447
PART 3		
17	Beyond the Elementary Catastrophes	451
1	$k > 5$	451
2	$n \rightarrow \infty$	456

3	$m > 1$	457
4	Symmetry-Restricted Catastrophes	458
5	Constraint Catastrophes	462
6	Summary	466
18	Gradient Dynamical Systems	468
1	Noncanonical Form for Gradient Systems	469
2	Phase Portraits: $\nabla V \neq 0$	469
3	Phase Portraits: Equilibria	470
4	Phase Portraits: Degeneracies	472
5	The Branching Tree	480
6	Marching	488
7	Relation Between Catastrophe Theory and Bifurcation Theory	494
8	Summary	499
19	Autonomous Dynamical Systems	501
1	Reduction to Gradient Form	502
2	Phase Portraits: $F \neq 0$	503
3	Phase Portraits: $F = 0$	505
4	Geometry of the Stability Matrix: $n = 2$	508
5	Perturbations Around Equal Nonzero Eigenvalues	510
6	Geometry of the Stability Matrix: $n > 2$	513
7	Perturbations of a Saddle Node	518
8	The Hopf Bifurcation	524
9	Summary	529
20	Equations Exhibiting Catastrophes	531
1	Aufbau Principle. 1	532
2	Van der Pol Oscillator. 1 Hopf Bifurcation	535
3	Van der Pol Oscillator. 2 Relaxation Oscillations	539
4	Aufbau Principle. 2	542

5	Strange Building Blocks. 1 “Spiral Chaos”	551
6	Strange Building Blocks. 2 Lorenz Attractor	553
7	Hydrodynamics. The Bénard Instability	562
8	Electrodynamics. The Laser-Spiking Instability	565
9	Aufbau Principle. 3	568
10	Center Manifold Theorem	573
11	Ruelle–Takens Picture of Turbulence	575
12	Summary	581

PART 4

21	Thom’s Theorem	585
1	Topology	586
2	Stable Functions	588
3	Generic Properties	591
4	Singularities of Mappings	593
5	Thom’s Theorem	595
6	Summary	596
22	Transversality	597
1	Transversality	598
2	Application 1: Linear Terms	606
3	Application 2: Quadratic Terms	607
4	Application 3: Germs with $l = 1$	611
5	Application 4: Germs with $l = 2$	612
6	Application 5: Germs with $l = 2, k \geq 7$	612
7	Application 6: Germs with $l = 3, k \geq 6$	613
8	Summary	613

23	Determinacy and Unfolding	615
1	Change of Variables	616
2	Determinacy (“Truncating” the Taylor Series)	617
3	Unfolding (Universal Perturbations)	620
4	Rules for Determinacy	623
5	Rules for Unfolding	626
6	Rules for Germs	629
7	Application 1: The Implicit Function Theorem	634
8	Application 2: The Morse Lemma	635
9	Application 3: A_k	635
10	Application 4: D_k	635
11	Application 5: E_6, E_7, E_8	636
12	Application 6: Multiple Cusps	637
13	Some Simple Germs	639
14	Summary	641
	Epilogue	643
	Author Index	647
	Subject Index	651
