EDITOR'S PREFACE	xi
PREFACE	xiii
INTRODUCTION	xv
1. ON EQUILIBRIUM OF SYSTEMS	1
1.1. Basic ideas	1
1.2. Chains and traversable regions	4
1.3. Equilibrium point, stability set, equilibrium set	6
1.4. "Equilibrium properties" of equilibrium points and equilibrium sets	7
1.5. On the existence of an equilibrium point	8
1.6. On the existence of stability sets	11
2. THE n -PERSON GAME	18
3. EXISTENCE THEOREMS OF EQUILIBRIUM POINTS	22
4. SPECIAL n -PERSON GAMES AND METHODS TO SOLVE THEM	41
4.1. Mathematical programming methods for the solution of n -person concave games	41

4.2.	Generalized polyhedral games	44
4.3.	Solution of n -person zero-sum concave-convex games	46
4.4.	Concave games with unique equilibrium points	50
5.	THE SCARF-HANSEN ALGORITHM FOR APPROXIMATING AN EQUILIBRIUM POINT OF A FINITE n-PERSON GAME	60
6.	THE OLIGOPOLY GAME	72
6.1.	The reduction principle	73
6.2.	The general multiproduct case	75
6.3.	The general linear case	78
6.4.	The single-product case	84
7.	TWO-PERSON GAMES	95
8.	BIMATRIX GAMES	103
8.1.	Basic definitions and some simple properties of bimatrix games	104
8.2.	Methods for solving bimatrix games	109
8.3.	Examples	120
9.	MATRIX GAMES	136
9.1.	Equilibrium and the minimax principle	136
9.2.	The set of equilibrium strategies	138
10.	SYMMETRIC GAMES	142
11.	CONNECTION BETWEEN MATRIX GAMES AND LINEAR PROGRAMMING	147

12.	METHODS FOR SOLVING GENERAL MATRIX GAMES	149
12.1.	Solution of matrix games by linear programming	149
12.2.	Method of fictitious play	152
12.3.	von Neumann's method	164
13.	SOME SPECIAL GAMES AND METHODS	171
13.1.	Matrices with saddle-points	171
13.2.	Dominance relations	173
13.3.	$2 \times n$ games	176
13.4.	Convex (concave) matrix games	180
14.	DECOMPOSITION OF MATRIX GAMES	183
15.	EXAMPLES OF MATRIX GAMES	189
15.1.	Example 1	189
15.2.	Example 2	191
16.	GAMES PLAYED OVER THE UNIT SQUARE	196
17.	SOME SPECIAL CLASSES OF GAMES ON THE UNIT SQUARE	200
18.	APPROXIMATE SOLUTION OF TWO- PERSON ZERO-SUM GAMES PLAYED OVER THE UNIT SQUARE	210
19.	TWO-PERSON ZERO-SUM GAMES OVER METRIC SPACES	219

20.	SEQUENTIAL GAMES	224
20.1.	Shapley's stochastic game	225
20.2.	Recursive games	229
21.	GAMES AGAINST NATURE	230
22.	COOPERATIVE GAMES IN CHARACTERISTIC FUNCTION FORM	237
23.	SOLUTION CONCEPTS FOR n -PERSON COOPERATIVE GAMES	249
23.1.	The von Neumann–Morgenstern solution	249
23.2.	The core	250
23.3.	The strong ε -core	254
23.4.	The kernel	258
23.5.	The nucleolus	261
23.6.	The Shapley-value	269
24.	STABILITY OF PAY-OFF CONFIGURATIONS	277
25.	A BARGAINING MODEL OF COOPERATIVE GAMES	293
26.	THE SOLUTION CONCEPT OF NASH FOR n -PERSON COOPERATIVE GAMES	309
27.	EXAMPLES OF COOPERATIVE GAMES	315
27.1.	A linear production game	315
27.2.	A market game	318
27.3.	The cooperative oligopoly game	321

27.4.	A game theoretic approach for cost allocation: a case	323
27.5.	Committee decision making as a game	329
28.	GAME THEORETICAL TREATMENT OF MULTICRITERIA DECISION MAKING	338
29.	GAMES WITH INCOMPLETE INFORMATION	353
29.1.	The Harsanyi-model	355
29.2.	The Selten-model	357
29.3.	Dynamic processes and games with limited information about the pay-off function	357
	EPILOGUE	370
