

Contents

1. Introduction	1
2. Strategies and payoffs	5
2.1. A general setting for evolutionary game theory	6
2.2. Mixed strategies and population games	8
2.3. Finite number of strategies	13
2.4. Infinitely many (pure) strategies	15
2.5. Structured populations: asymmetric contests and multitype games	17
2.6. Additional remarks	21
3. Evolutionary stability	25
3.1. Definition of evolutionary stability	25
3.2. Evolutionary stability and solution concepts in classical game theory	30
3.3. Conditions for evolutionary stability based on the normal cone	31
3.4. Conditions for evolutionary stability using smoothness	35
3.5. Evolutionary stability in populations with fixed structure	38
3.6. Additional remarks	42
4. Global invasion barriers	45
4.1. Uninvadability: definition and examples	45
4.2. Conditions for uninvadability based on continuity properties	49
4.3. Conditions for uninvadability using smoothness	53
4.4. An illustrative example	56
4.5. Additional remarks	57
5. Games with bilinear average mean payoff	61
5.1. Pairwise conflicts and bilinear average mean payoff	61
5.2. Evolutionary stability under bilinearity	64
5.3. Uninvadability under bilinearity	66

6. Mixed strategies	69
6.1. Evolutionary stability and extremality	70
6.2. The structure of C_P for polyhedral \bar{X}	73
6.3. On the number of evolutionarily stable states	76
6.4. Additional remarks	81
7. Population games	83
7.1. On the equivalence of evolutionary stability and uninvadability	84
7.2. Conditions for evolutionary stability and uninvadability	90
7.3. The case of polyhedral population strategy sets	93
7.4. The role of copositivity in population games with $\bar{X} = S^n$	95
7.5. Additional remarks	99
8. Replicator dynamics	105
8.1. Dynamical stability and uninvadability	106
8.2. Dynamical versus evolutionary stability	111
Appendix	117
