Preface	xiii
1 PRELIMINARY CALCULUS	1
1.1 Notations and symbols	1
1.2 Complex numbers	2
1.3 Convergence of series	8
1.4 Differentiation	13
1.5 Differentiation of products and quotients	15
1.6 Leibniz theorem	17
1.7 Maxima and minima	20
1.8 Partial differentiation	22
1.9 The summation convention	27
1.10 Change of variables	29
1.11 Dependent functions	33
1.12 Maxwell's relations and Jacobians	34
1.13 Stationary values for functions of several variables	38
1.14 Stationary values under constraints	41
1.15 Integration	45
1.16 Infinite and improper integrals	48
1.17 Integration by parts	50
1.18 Multiple integrals	54
1.19 Change of variables in multiple integrals	57
1.20 Examples for solution	65
2 VECTOR ALGEBRA	69
2.1 Definitions	69
2.2 Notation	70
2.3 Combining vectors	71
2.4 Multiplication of vectors	72
2.5 Base vectors	73
2.6 Scalar products	74
2.7 Vector products	76
2.8 Triple products	78
2.9 Reciprocal vectors	80
2.10 Examples for solution	81

3	CALCULUS OF VECTORS	83
3.1	Derivatives of vectors and vector expressions	83
3.2	Vectors with several arguments	85
3.3	Fields and line integrals	86
3.4	Line integrals with respect to vectors	88
3.5	Surface integrals	90
3.6	Volume integrals	92
3.7	Non-Cartesian systems	93
3.8	Examples for solution	94
4	VECTOR OPERATORS	96
4.1	Gradient of a scalar	96
4.2	Divergence of a vector	98
4.3	Curl (or rotation) of a vector	101
4.4	Stokes' theorem	105
4.5	Vector operator identities	106
4.6	Conservative fields and potentials	107
4.7	Non-Cartesian systems	110
4.8	Examples for solution	114
5	ORDINARY DIFFERENTIAL EQUATIONS	116
5.1	General form of solution	117
5.2	First-order equations	119
5.3	Linear first-order equations	122
5.4	Higher degree first-order equations	124
5.5	Second-order equations	125
5.6	Linear equations with constant coefficients	127
5.7	The D operator	130
5.8	Variation of parameters	135
5.9	Partially-known complementary function	138
5.10	General second-order equations	139
5.11	Laplace transform methods	140
5.12	Examples for solution	147
6	SERIES SOLUTIONS OF DIFFERENTIAL EQUATIONS	150
6.1	Ordinary and singular points	151
6.2	General method and indicial equation	153
6.3	Equal roots of the indicial equation	155
6.4	Roots differing by an integer	157
6.5	Convergence of series	162
6.6	Finite polynomials	162

6.7	Legendre polynomials	164
6.8	Generating functions	167
6.9	General remarks	169
6.10	Examples for solution	170
7	SUPERPOSITION METHODS	173
7.1	Sturm–Liouville theory	175
7.2	Examples of Sturm–Liouville equations	178
7.3	Application of superposition	180
7.4	Green’s functions	182
7.5	Forms of Green’s functions	184
7.6	Generalization	187
7.7	Examples for solution	188
8	FOURIER METHODS	190
8.1	Sets of functions	191
8.2	The expansion and coefficients	193
8.3	Symmetry considerations	197
8.4	Function continuation for fixed intervals	200
8.5	Differentiation and integration	204
8.6	Fourier transforms	205
8.7	Properties of Fourier transforms	212
8.8	The δ -function	214
8.9	Parseval’s theorem	217
8.10	Convolution and deconvolution	219
8.11	Examples for solution	222
9	PARTIAL DIFFERENTIAL EQUATIONS	225
9.1	Arbitrary functions	225
9.2	General solutions and boundary conditions	228
9.3	Second-order equations	231
9.4	Equation and boundary condition types	233
9.5	Uniqueness theorem	235
9.6	Equations with constant coefficients	238
9.7	The wave equation	245
9.8	Particular integrals	247
9.9	The diffusion equation	249
9.10	Superposing solutions	253
9.11	Laplace transform methods	254
9.12	The telegraphy equation	256
9.13	Some other equations	259
9.14	Examples for solution	260

10 SEPARATION OF VARIABLES	266
10.1 The general method	267
10.2 Some particular equations (revisited)	269
10.3 Laplace's equation in polar coordinates	271
10.4 Spherical harmonics	279
10.5 The wave and Schrodinger equations in spherical polars	280
10.6 Superposition methods	283
10.7 Solutions by expansion	286
10.8 Examples for solution	289
11 NUMERICAL METHODS	293
11.1 Algebraic and transcendental equations	295
11.2 Convergence of iteration schemes	303
11.3 Simultaneous linear equations	305
11.4 Numerical integration	311
11.5 Finite differences	316
11.6 Difference schemes for differential equations	317
11.7 Taylor series solutions	321
11.8 Prediction and correction	323
11.9 Runge-Kutta methods	324
11.10 Higher-order equations	326
11.11 Partial differential equations	328
11.12 Examples for solution	330
12 CALCULUS OF VARIATIONS	332
12.1 Euler's equation	333
12.2 Special cases and simple examples	335
12.3 Fermat's principle	340
12.4 Some extensions	341
12.5 Hamilton's principle and Lagrange's equations	342
12.6 Conditional variation	344
12.7 Examples for solution	346
13 GENERAL EIGENVALUE PROBLEM	349
13.1 Laplace's equation	349
13.2 Sturm-Liouville equation	350
13.3 Estimation of eigenvalues and eigenfunctions	351
13.4 Adjustment of parameters	354
13.5 Rayleigh's method	356
13.6 Examples for solution	359

14	MATRICES	361
14.1	Some notations	362
14.2	Determinants	363
14.3	Some properties of determinants	368
14.4	Simultaneous homogeneous linear equations	372
14.5	Matrix algebra	373
14.6	Simultaneous linear equations	379
14.7	Derived matrices and their properties	380
14.8	Eigenvalues and eigenvectors	383
14.9	Determination of eigenvalues and eigenvectors	385
14.10	Diagonalization of matrices	388
14.11	Quadratic and Hermitian forms	392
14.12	Mechanical oscillations and normal modes	395
14.13	Examples for solution	402
15	CARTESIAN TENSORS	408
15.1	First- and zeroth-order Cartesian tensors	409
15.2	Second- and higher-order Cartesian tensors	413
15.3	The algebra of tensors	416
15.4	The quotient law	418
15.5	The tensors δ_{ij} and ϵ_{ijlc}	419
15.6	Isotropic tensors	422
15.7	Polar and axial vectors	423
15.8	Physical tensors	426
15.9	Stress and strain tensors	429
15.10	Examples for solution	435
16	COMPLEX VARIABLES	439
16.1	Functions of a complex variable	440
16.2	Power series in a complex variable	444
16.3	Some elementary functions	447
16.4	Complex potentials and conformal transformations	449
16.5	Examples of complex potentials	454
16.6	Complex integrals	456
16.7	Cauchy's theorem and integral	461
16.8	Zeros and singularities	465
16.9	Residue theorem	467
16.10	Location of zeros	469
16.11	Integrals of sinusoidal functions	473
16.12	Some infinite integrals	474
16.13	Integrals of many-valued functions	477
16.14	Summation of series	479

16.15	Inverse Laplace transform	480
16.16	Examples for solution	484
	SOLUTIONS AND HINTS FOR EXERCISES AND EXAMPLES	488
	INDEX	521
