List of Programs, ix

Preface, xi

Acknowledgements, xiii

- 1 Introduction and Programming Preliminaries, 1
 - 1.1 Introduction, 1
 - 1.2 Software and hardware, 1
 - 1.3 Mathematical subroutine libraries, 1
 - 1.4 Functions and subroutines, 3
 - 1.4.1 Arrays as parameters in subroutines, 4
 - 1.5 Errors, 7
 - 1.5.1 Roundoff, 7
 - 1.5.2 Truncation, 8
 - 1.5.3 Cancellation, 9
 - 1.6 Conclusions, 9
 - 1.7 Further reading, 10

- 2 Linear Algebraic Equations, 11
 - 2.1 Introduction, 11
 - 2.2 Gaussian elimination, 11
 - 2.2.1 Observations on the elimination process, 15
 - 2.3 Equation solution using LU factorisation, 16
 - 2.3.1 Observations on the solution process by factorisation, 20
 - 2.4 Equations with symmetrical coefficient matrix, 20
 - 2.4.1 Quadratic form and positive definiteness, 24
 - 2.4.2 Cholesky's method, 26
 - 2.5 Banded equations, 27
 - 2.6 Compact storage for variable bandwidths, 30
 - 2.7 Pivoting, 33
 - 2.7.1 Ill-conditioning, 35
 - 2.8 Equations with prescribed 'variables', 36
 - 2.9 Iterative methods, 38
 - 2.9.1 The iterative process, 39
 - 2.9.2 Very sparse systems, 44
 - 2.9.3 The Gauss-Seidel method, 44
 - 2.9.4 Successive overrelaxation, 48

- 2.10 Gradient methods, 51
 - 2.10.1 The method of 'steepest descent', 51
 - 2.10.2 The method of 'conjugate gradients', 54
 - 2.10.3 Convergence of iteration methods, 56
 - 2.10.4 Preconditioning, 56
- 2.11 Comparison of direct and iterative methods, 57
- 2.12 Exercises, 58
- 2.13 Further reading, 60
- 3 Nonlinear Equations, 62
 - 3.1 Introduction, 62
 - 3.2 Iterative substitution, 65
 - 3.3 Multiple roots and other difficulties, 67
 - 3.4 Interpolation methods, 68
 - 3.4.1 Method of bisection, 69
 - 3.4.2 False position method, 71
 - 3.5 Extrapolation methods, 74
 - 3.5.1 Newton–Raphson method, 74
 - 3.5.2 A modified Newton–Raphson method, 76
 - 3.6 Acceleration of convergence, 79
 - 3.7 Systems of nonlinear equations, 80
 - 3.7.1 Iterative substitution for systems, 80
 - 3.7.2 Newton–Raphson for systems, 82
 - 3.7.3 Modified Newton–Raphson method for systems, 86
 - 3.8 Exercises, 89
 - 3.9 Further reading, 91
- 4 Eigenvalue Equations, 92
 - 4.1 Introduction, 92
 - 4.2 Orthogonality and normalisation of eigenvectors, 93
 - 4.3 Solution methods for eigenvalue equations, 94
 - 4.4 Vector iteration, 94
 - 4.4.1 Shifted iteration, 97
 - 4.4.2 Shifted inverse iteration, 99
 - 4.5 Calculation of intermediate eigenvalues – deflation, 103
 - 4.6 The generalised eigenvalue problem $\mathbf{Ax} = \lambda\mathbf{Bx}$, 105
 - 4.6.1 Conversion of generalised problem to standard form, 108
 - 4.7 Transformation methods, 111
 - 4.7.1 Comments on Jacobi diagonalisation, 117
 - 4.7.2 Householder's transformation to tridiagonal form, 117
 - 4.7.3 LR transformation for eigenvalues of tridiagonal matrices, 121
 - 4.7.4 Lanczos reduction to tridiagonal form, 124
 - 4.8 Characteristic polynomial methods, 127
 - 4.8.1 Evaluating determinants of tridiagonal matrices, 127
 - 4.8.2 The Sturm sequence property, 128
 - 4.8.3 General symmetric matrices, e.g. band matrices, 133
 - 4.9 Exercises, 133
 - 4.10 Further reading, 135
- 5 Interpolation and Curve Fitting, 137
 - 5.1 Introduction, 137

- 5.2 Interpolating polynomials, 137
 - 5.2.1 Lagrangian polynomials, 137
 - 5.2.2 Difference methods, 141
 - 5.2.3 Spline functions, 146
- 5.3 Numerical differentiation, 151
 - 5.3.1 Errors in difference formulae, 158
- 5.4 Curve fitting, 159
 - 5.4.1 Least squares, 159
- 5.5 Exercises, 164
- 5.6 Further reading, 167

6 Numerical Integration, 168

- 6.1 Introduction, 168
- 6.2 Newton–Cotes rules, 169
 - 6.2.1 Introduction, 169
 - 6.2.2 One-point rule (rectangle rule, $n=1$), 170
 - 6.2.3 Two-point rule (trapezium rule, $n=2$), 170
 - 6.2.4 Three-point rule (Simpson's rule, $n=3$), 171
 - 6.2.5 Higher order Newton–Cotes rules ($n>3$), 173
 - 6.2.6 Accuracy of Newton–Cotes rules, 173
 - 6.2.6.1 Error in rectangle rule, 174
 - 6.2.6.2 Error in trapezium rule, 174
 - 6.2.6.3 Error in Simpson's rule, 174
 - 6.2.7 Summary of Newton–Cotes rules, 175
 - 6.2.8 Repeated rules, 176
 - 6.2.8.1 Repeated trapezium rule, 176
 - 6.2.8.2 Repeated Simpson's rule, 177
 - 6.2.9 Remarks on Newton–Cotes rules, 180
- 6.3 Gauss–Legendre rules, 180
 - 6.3.1 Introduction, 180
 - 6.3.2 One-point rule (midpoint rule, $n=1$), 181
 - 6.3.3 Two-point rule, 182
 - 6.3.4 Three-point rule ($n=3$), 183
 - 6.3.5 Changing the limits of integration, 184
 - 6.3.6 Accuracy of Gauss–Legendre rules, 188
 - 6.3.7 Summary of Gauss–Legendre rules, 188
- 6.4 Special integration rules, 189
 - 6.4.1 Introduction, 189
 - 6.4.2 Gauss–Laguerre rules, 189
 - 6.4.3 Gauss–Chebyshev rules, 192
 - 6.4.4 Fixed weighting coefficients, 192
 - 6.4.5 Hybrid methods, 193
 - 6.4.6 Sampling points outside the range of integration, 193
- 6.5 Multiple integrals, 194
 - 6.5.1 Introduction, 194
 - 6.5.2 Integration over a rectangular area, 195
 - 6.5.3 Integration over a general quadrilateral area, 200
- 6.6 Exercises, 205
- 6.7 Further reading, 209

7 Numerical Solutions of Ordinary Differential Equations, 210

- 7.1 Introduction, 210
- 7.2 Definitions and types of differential equations, 210
- 7.3 Initial value problems, 212
 - 7.3.1 One-step methods, 213
 - 7.3.1.1 Euler's method, 214
 - 7.3.1.2 Modified Euler's method, 216
 - 7.3.1.3 Midpoint method, 217
 - 7.3.1.4 Runge–Kutta methods, 219
 - 7.3.1.5 Accuracy of one-step methods, 222
 - 7.3.1.6 Reduction of high order equations, 224
 - 7.3.1.7 Solution of simultaneous first order equations, 226
 - 7.3.1.8 θ -Methods for linear equations, 231
 - 7.3.2 Predictor–corrector methods, 233
 - 7.3.2.1 Euler-trapezoidal method, 235
 - 7.3.2.2 Milne's method, 236
 - 7.3.2.3 Adams–Moulton–Bashforth method, 237
 - 7.3.2.4 Accuracy of predictor–corrector methods, 238
 - 7.3.3 Stiff equations, 242
 - 7.3.4 Error propagation – numerical stability, 242
 - 7.3.5 Concluding remarks on initial value problems, 244
- 7.4 Boundary value problems, 244
 - 7.4.1 Finite difference methods, 245
 - 7.4.2 Shooting methods, 252
 - 7.4.3 Weighted residual methods, 261
 - 7.4.3.1 Collocation, 264
 - 7.4.3.2 Subdomain, 265
 - 7.4.3.3 Least squares, 266
 - 7.4.3.4 Galerkin's method, 267
 - 7.4.3.5 Concluding remarks on weighted residual procedures, 268

8 Introduction to Partial Differential Equations, 276

- 8.1 Introduction, 276
- 8.2 Some definitions, 276
- 8.3 First order equations, 277
- 8.4 Second order equations, 281
- 8.5 Finite differences in two dimensions, 283
- 8.6 Elliptic systems, 286
- 8.7 Parabolic systems, 291
 - 8.7.1 Stability of finite differences, 292
- 8.8 Hyperbolic systems, 295
- 8.9 Exercises, 298
- 8.10 Further reading, 302

APPENDIX 1: Alphabetic description of subroutine library, 303

APPENDIX 2: Alphabetic listing of subroutine library in FORTRAN 77, 313

Index, 327
