Series Preface	vii
Preface	ix
1 Linear Systems	1
1.1 Uncoupled Linear Systems	1
1.2 Diagonalization	6
1.3 Exponentials of Operators	10
1.4 The Fundamental Theorem for Linear Systems	16
1.5 Linear Systems in \mathbf{R}^2	19
1.6 Complex Eigenvalues	27
1.7 Multiple Eigenvalues	31
1.8 Jordan Forms	38
1.9 Stability Theory	50
1.10 Nonhomogeneous Linear Systems	58
2 Nonlinear Systems: Local Theory	63
2.1 Some Preliminary Concepts and Definitions	63
2.2 The Fundamental Existence-Uniqueness Theorem	68
2.3 Dependence on Initial Conditions and Parameters	77
2.4 The Maximal Interval of Existence	84
2.5 The Flow Defined by a Differential Equation	92
2.6 Linearization	98
2.7 The Stable Manifold Theorem	102
2.8 The Hartman–Grobman Theorem	116
2.9 Stability and Liapunov Functions	125
2.10 Saddles, Nodes, Foci and Centers	133
2.11 Nonhyperbolic Critical Points in R^2	142
2.12 Center Manifold Theory	149
2.13 Normal Form Theory	159
2.14 Gradient and Hamiltonian Systems	166

3	Nonlinear Systems: Global Theory	177
3.1	Dynamical Systems and Global Existence Theorems	178
3.2	Limit Sets and Attractors	187
3.3	Periodic Orbits, Limit Cycles and Separatrix Cycles	197
3.4	The Poincaré Map	206
3.5	The Stable Manifold Theorem for Periodic Orbits	215
3.6	Hamiltonian Systems with Two-Degrees of Freedom	228
3.7	The Poincaré–Bendixson Theory in R^2	238
3.8	Lienard Systems	247
3.9	Bendixson’s Criteria	258
3.10	The Poincaré Sphere and the Behavior at Infinity	261
3.11	Global Phase Portraits and Separatrix Configurations	285
3.12	Index Theory	291
4	Nonlinear Systems: Bifurcation Theory	309
4.1	Structural Stability and Peixoto’s Theorem	310
4.2	Bifurcations at Nonhyperbolic Equilibrium Points	328
4.3	Higher Codimension Bifurcations at Nonhyperbolic Equilibrium Points	336
4.4	Hopf Bifurcations and Bifurcations of Limit Cycles from a Multiple Focus	343
4.5	Bifurcations at Nonhyperbolic Periodic Orbits	355
4.6	One-Parameter Families of Rotated Vector Fields	376
4.7	The Global Behavior of One-Parameter Families of Periodic Orbits	388
4.8	Homoclinic Bifurcations	393
4.9	Melnikov’s Method	407
4.10	Global Bifurcations of Systems in R^2	423
4.11	Second and Higher Order Melnikov Theory	443
4.12	Françoise’s Algorithm for Higher Order Melnikov Functions	457
4.13	The Takens–Bogdanov Bifurcation	469
4.14	Coppel’s Problem for Bounded Quadratic Systems	479
4.15	Finite Codimension Bifurcations in the Class of Bounded Quadratic Systems	518
	Appendix	534
	References	547
	Additional References	549
	Index	555
