PREFACE	vii
LIST OF FORTRAN IV PROGRAMS	xiii
LIST OF NUMERICAL APPLICATION EXAMPLES	xv
Chapter 1: INTRODUCTION TO FOURIER TRANSFORMATION	1
1.1 Introduction	1
1.2 Definitions	1
1.3 Basic theorems	4
1.4 Some useful transform pairs	11
1.5 Bandlimited functions	14
Problems	22
Chapter 2: DISCRETE FOURIER TRANSFORMATION	31
2.1 Introduction	31
2.2 Definitions	31
2.3 Relationship of DFT, Fourier transform, and Fourier series	34
2.4 Fast Fourier transform (FFT) algorithms	47
2.5 Basic theorems of DFT	60
2.6 Bandlimited and time-limited interpolation	71
2.6.1 Sampling time-limited function of time	71
2.6.2 Sampling bandlimited function of frequency	73
2.6.3 Insertion of zeroes to data sampled in time	74
2.6.4 Insertion of zeroes to data sampled in frequency	75
2.6.5 Bandlimited interpolation	76
2.6.6 Time-limited interpolation	77
2.7 Linear convolution and linear correlation	79
2.8 Discrete energy spectrum	80
Problems	82
Chapter 3: POWER SPECTRA ESTIMATION USING DFT	93
3.1 Introduction	93
3.2 Two basic methods of power spectra estimation	94
3.2.1 Indirect method	95
3.2.2 Direct method	98
3.2.3 Some additional observations on spectra estimation methods	104
3.3 Data and spectral windows	105
3.4 Power spectra estimation using DFT	119
3.4.1 Indirect method using DFT	119
3.4.2 Direct method using DFT	126
3.4.3 A brief description of modern methods	130
3.5 Discrete data and spectral windows	132
3.6 Average and short-time spectral analysis of processes not wide-sense stationary	151

3.7	Harmonic analysis of periodic and periodic-like signals using DFT	159
	Problems	164
Appendix A:	FOURIER SPECTRAL DENSITY	183
Appendix B:	EXAMPLES OF POWER SPECTRA ESTIMATION USING DFT	191
B.1	Introduction	191
B.2	Finite energy signals	192
B.3	Periodic and periodic-like signals	211
B.4	Stationary random processes	238
B.5	Non-stationary random processes	258
