PREFACE *xi*

1. INTRODUCTION TO NONLINEAR PROGRAMMING 1
  - 1.1 Reflections 1
  - 1.2 Mathematical Programming Problems 2
  - 1.3 Varieties and Characteristics of  
Mathematical Programs 4
  - 1.4 Some Example Formulations 7
  - 1.5 Difficulties Caused by Nonlinearity 13
  - 1.6 Historical Outline 17
  - 1.7 Preview of the Text 19
  - Exercises 20
  
2. REVIEW OF LINEAR PROGRAMMING 26
  - 2.1 Introduction 26
  - 2.2 Taylor's Theorem 27

2.3	Notes from Linear Algebra	35
2.4	The Simplex Method	37
2.5	The Dual Problem	45
2.6	The Duality Theorem	49
2.7	The Existence Theorem and Complementary Slackness	54
2.8	Interpretations of Duality	57
	Exercises	64

### 3. FURTHER MATHEMATICAL BACKGROUND 71

3.1	Introduction	71
3.2	Maxima and Minima	71
3.3	Quadratic Forms	75
3.4	Convex and Concave Functions	80
3.5	Convex Feasible Regions and Optimal Solutions	86
3.6	Alternate Characterizations of Convex and Concave Functions	91
	Exercises	96

### 4. CLASSICAL UNCONSTRAINED OPTIMIZATION 101

4.1	Varieties of Mathematical Programs	101
4.2	Unconstrained Optimization	103
4.3	Simultaneous Nonlinear Equations	110
4.4	The Gradient Vector	113
4.5	Direct Climbing Algorithms	115
4.6	Convergence of Direct Climbing Algorithms	118
4.7	The Optimal Gradient Method	122
4.8	Computing the Step Length in the Optimal Gradient Method	127
4.9	Modifications to the Optimal Gradient Method	135

4.10	Newton's Method	138
	Exercises	143
<b>5.</b>	<b>OPTIMUM-SEEKING BY EXPERIMENTATION</b>	<b>147</b>
5.1	Experimental Seeking	147
5.2	Quasi-Concave and Quasi-Convex Functions	150
5.3	Simultaneous Search Strategies for One-Variable Problems	152
5.4	Sequential Search Strategies for One-Variable Problems	156
5.5	Strategies for Multi-Variable Search	162
	Exercises	166
<b>6.</b>	<b>LAGRANGE MULTIPLIERS AND KUHN-TUCKER THEORY</b>	<b>169</b>
6.1	Constrained Optimization Theory	169
6.2	Lagrange Multipliers: Some Heuristic Geometry	170
6.3	Lagrange Multipliers: An Algebraic Derivation	174
6.4	Examples and Computational Remarks	177
6.5	Interpretation of Lagrange Multipliers	179
6.6	Inequality Constraints	181
6.7	Heuristic Description of Kuhn-Tucker Conditions	183
6.8	The Feasible Region and Constraint Qualification	187
6.9	The Kuhn-Tucker Necessary Conditions	192
6.10	Application to Linear Programming	197
6.11	Sufficiency of the Kuhn-Tucker Conditions	201
6.12	The Lagrangian Function and Saddle Points	202
6.13	Saddle Points and Optimal Solutions	204
	Exercises	209

- 7. QUADRATIC PROGRAMMING 217**
- 7.1 Linearly Constrained Problems and Quadratic Objectives 217
  - 7.2 The Quadratic Program: Examples and Applications 219
  - 7.3 Wolfe's Algorithm 224
  - 7.4 Convergence of Wolfe's Algorithm in the Negative Definite Case 229
  - 7.5 An Example 236
  - 7.6 The Method of Beale 242
  - 7.7 An Example 249
  - 7.8 Lemke's Algorithm 258
  - 7.9 An Example 267
  - 7.10 Computational Considerations in Quadratic Programming 269  
Exercises 273
- 8. ALGORITHMS FOR LINEARLY CONSTRAINED PROBLEMS 280**
- 8.1 Introduction 280
  - 8.2 Separable Programming: the Approximating Problem 281
  - 8.3 Convex Separable Programming 288
  - 8.4 Separable Programming with Restricted Basis Entry 294
  - 8.5 The Convex Simplex Method 297
  - 8.6 An Example 305
  - 8.7 The Reduced Gradient Method 312
  - 8.8 Degeneracy in Linearly Constrained Problems 317
  - 8.9 Methods of Feasible Directions 320
  - 8.10 Determination of the Direction Vector 328
  - 8.11 The Gradient Projection Method 331

8.12	Geometry, Computations, and an Example	338
8.13	Degeneracy in the Gradient Projection Method	346
8.14	Convergence of Feasible-Directions Algorithms	350
	Exercises	359
<b>9.</b>	<b>ALGORITHMS FOR NONLINEARLY CONSTRAINED PROBLEMS</b>	<b>371</b>
9.1	Nonlinearity in the Constraints	371
9.2	Separable Programming	372
9.3	Kelley's Cutting-Plane Method	378
9.4	Zoutendijk's Feasible-Directions Method	388
9.5	Zigzagging and the $\epsilon$ -Perturbation Method	397
9.6	Primal Nonlinear Programming Algorithms: A Summary	401
9.7	Sequential Unconstrained Optimization: Barrier Methods	404
9.8	Computational Aspects of the Barrier Algorithm	412
9.9	Convex Programs, Duality, and the Barrier Algorithm	416
9.10	Penalty Methods	422
9.11	Conclusion	432
	Exercises	433
