Preface	ix
Chapter 1 Logic, Sets, and Functions	1
1.1 The language of logic	1
Propositions	1
Predicates and quantifiers	4
1.2 English consonants and some elementary concepts in the theory of sets	10
1.3 Some notational conventions and special sets	15
1.4 Oppositions and operations with sets	18
1.5 Functions and relations	26
1.6 More about oppositions and an introduction to p.d.f.s.	33
1.7 Graphs of relations	38
Some graphs connected with kinship	43
1.8 Partial order and Boolean algebras	49
1.9 Rings, Boolean rings, and proportional oppositions	54
Rings and Boolean rings	54
Symmetric difference and proportionality	60
1.10 More about functions	65
Chapter 2 Isomorphism, Homomorphism, Distance, and the Mathematics of Etic systems	70
2.1 Etic systems	72
2.2 Isomorphisms and homomorphisms between etic systems	79
The concept of isomorphism	79
Homomorphisms	81
A theorem relating feature-extensions to homomorphisms	86
2.3 A distance for the set of signs in an etic system	90
2.4 Complete etic systems	98
2.5 Isomorphisms between lattices	101

Chapter 3	Language and Emic Systems	108
3.1	The concept of language over a finite vocabulary	109
	A formal definition of language	109
	Some useful concepts for discussing language	112
3.2	A synonymy relation for formal languages	117
	Preliminary discussion	117
	Synonymy systems	118
	A counter-example	121
	A synonymy system connected with English pronouns	122
3.3	Variation in the wide sense	129
3.4	Emic systems and M-systems	132
	Boundedness	132
	Relevance	135
	The definition of the emic unit	136
3.5	An M-system associated with English phonology	138
3.6	Partial M-systems	141
3.7	A metric definition of emic units	146
Chapter 4	Production Grammars	154
4.1	Grammars and production grammars	155
4.2	Some classes of production grammars	160
4.3	Finite-state grammars and regular grammars	168
4.4	A characterization of regular languages	173
4.5	"English is not a regular language" and closure properties of regular languages	176
4.6	Context-free grammars	182
4.7	A necessary condition for a language to be CF	186
	Preliminary remarks	186
	Proof of Theorem 1	191
4.8	Context-sensitive grammars	195
4.9	Matrix grammars	202
Chapter 5	Structural description and transformations	210
5.1	Structural descriptions	211
5.2	Labelled graphs and parsing trees	220

5.3	Connected well-formed labelled bracketings and parsing trees	228
5.4	Transformations	234
	An informal example	234
	Towards a definition of transformation	238
5.5	Transformational grammars	247
	Definition and an example	248
	Flow diagrams	254
5.6	A more ambitious example: Mayan number names	259
5.7	Feature matrices	268
	A rule-application convention	275
5.8	Feature matrix transformational grammars	280
	Lexical entries	281
	The definition of fmTG	283
	An example	284
 Appendix		
A.1	Natural numbers	298
A.2	Algorithms and effective procedures	304
