Preface	vii
1 Set Theory and Properties of \mathbf{R}^n	1
1.1 Set-Theoretic Notation and Concepts	1
1.2 Properties of the Real Numbers	11
1.3 Binary Relations	18
1.4 Inner Product, Norm, and Euclidean Metric	33
1.5 Open and Closed Sets in \mathbf{R}^n	40
1.6 Relatively Open and Closed Sets	50
1.7 Some Linear Space Properties of \mathbf{R}^n	56
2 Sequences and Infinite Series	61
2.1 Sequences of Real Numbers	61
2.2 Subsequences and Cauchy Sequences	71
2.3 Infinite Series	81
2.4 Efficient Allocation in a Simple Growth Model	96
2.5 Sequences and Series in \mathbf{R}^n	103
3 Continuity	115
3.1 Continuous Vector-Valued Functions	115
3.2 Continuity and Compactness	126
3.3 Semi-Continuous Functions	134
3.4 Limits Inferior and Superior of a Function*	144
3.5 Transformation Functions	149
3.6 Production and Cost Functions	166
3.7 Sequences of Functions and Limit Functions	179
4 Linear Spaces	189
4.1 Introduction	189
4.2 Linear Combinations and Subspaces	196
4.3 Linear Transformations and Functionals	212
4.4 Normed Linear Spaces	219
4.5 Inner Product Spaces	229
4.6 Product Spaces and Direct Sums	237

4.7	Affine Sets	247
5	Convex Sets and Functions	261
5.1	Convex Sets	261
5.2	Relative Interiors of Convex Sets	271
5.3	Extreme Points of a Convex Set	277
5.4	Minimum Distance and Projection Theorems	286
5.5	Basic Separation Theorems in \mathbf{R}^n	294
5.6	Convex and Concave Functions	310
5.7	Continuity of Convex Functions	320
5.8	Quasi-Concave and Quasi-Convex Functions	330
6	Applications of Convexity	341
6.1	Introduction	341
6.2	Basic Production and Cost Theory	341
6.3	Distance and Support Functions	349
6.4	Duality of Cost and Production	358
6.5	Homotheticity	364
6.6	The 'Fundamentals of Welfare Economics'	374
6.7	Constrained Extrema and Saddle Points	392
	Bibliography	401
	Index	409
