Contents

Preface vii

7 An Introduction to Topology 1
7.1 Basic Concepts . . . 1
7.2 Closed Sets and Closures . . . 6
7.3 Topological Bases . . . 11
7.4 Continuous Functions . . . 18
7.5 Metric Spaces . . . 25
7.6 Complete Metric Spaces . . . 34
7.7 Nets and Convergence . . . 43

8 Additional Topics in Topology 51
8.1 Relative and Product Topologies . . . 51
8.2 Compactness . . . 61
8.3 Hausdorff and Normal Spaces . . . 79
8.4 Compact Metric Spaces . . . 87
8.5 Connected Spaces . . . 94
8.6 Paracompactness and Partitions of Unity . . . 102

9 Correspondences 111
9.1 Preliminary Considerations . . . 111
9.2 Hemi-Continuous Correspondences . . . 117
9.3 Correspondences Defined by Functions . . . 125
9.4 Closed Correspondences . . . 134
9.5 The Domain and Range of Correspondences . . . 142
9.6 Compositions of Correspondences . . . 150
9.7 Operations with Correspondences . . . 155
9.8 Correspondences into Metric Spaces . . . 166
9.9 Open Correspondences and Open Sections . . . 173

10 Banach Spaces 183
10.1 Preliminaries . . . 183
10.2 An Introduction to Banach Spaces . . . 190
10.3 Bounded Linear Mappings . . . 197

10.4 Some Fundamental Theorems 207
10.5 Dual Spaces 216

11 Topological Vector Spaces **227**
11.1 Introduction 227
11.2 Continuous Functions and Convex Sets 240
11.3 Separation Theorems 247
11.4 Equilibrium Models in Hilbert Space 252
11.5 Locally Convex Spaces 263
11.6 Correspondences 268

12 Selection and Fixed Point Theorems **277**
12.1 Maximum Theorems 277
12.2 Sperner's Lemma and the K-K-M Theorem 286
12.3 Fixed Point Theorems 299
12.4 Selection Theorems 306
12.5 Equilibrium in an 'Abstract Economy.' 316

Bibliography **329**

Index **337**
