

Contents

| | |
|---|-----|
| List of contributors | vii |
| Preface | ix |
| Chapter 1 About the basic numerical methods..... A. Dervieux | 1 |
| Chapter 2 Navier–Stokes equations for incompressible flows: finite-difference and finite-volume methods G.B. Deng, J. Piquet, P. Queutey and M. Visonneau | 25 |
| Chapter 3 Navier–Stokes equations for incompressible flows: finite-element methods M.D. Gunzburger | 99 |
| Chapter 4 Euler and Navier–Stokes equations for compressible flows: finite-volume methods..... F. Grasso and C. Meola | 159 |
| Chapter 5 Turbulent flows: direct numerical simulation and large-eddy simulation C. Härtel | 283 |
| Chapter 6 Turbulent flows: model equations and solution methodology T.B. Gatski | 339 |
| Chapter 7 Mesh generation and adaptivity for complex geometries and flows D.J. Mavriplis | 417 |
| Index | 461 |
