

Contents

1. Introduction	1
1.1 Skin-Friction Drag Reduction	3
1.1.1 Laminar Flow Control	4
1.1.2 Calculations for NLF and HLFC Wings	7
1.2 Prediction of the Maximum Lift Coefficient of Multielement Wings	11
1.3 Prediction of Aircraft Performance Degradation Due to Icing ...	16
1.3.1 Prediction of Ice Shapes	19
1.3.2 Prediction of Aerodynamic Performance Characteristics .	21
References	27
2. Conservation Equations for Mass and Momentum	29
2.1 Introduction	29
2.2 Navier-Stokes Equations	30
2.3 Reynolds-Averaged Navier-Stokes Equations	32
2.4 Reduced Forms of the Navier-Stokes Equations	34
2.4.1 Parabolized and Thin-Layer Navier Stokes Equations ...	34
2.4.2 Inviscid Flow	35
References	35
Problems	36
3. Boundary-Layer Equations	39
3.1 Two-Dimensional Flows	39
3.1.1 Laminar Flows	39
3.1.2 Turbulent Flows	41
3.2 Axisymmetric Flows	42
3.3 Momentum Integral Equation	44
3.3.1 Two-Dimensional Flows	44
3.3.2 Axisymmetric Flows	46

3.4	Boundary and Initial Conditions	46
	References	48
	Problems	49
4.	Two-Dimensional Laminar Flows	57
4.1	Introduction	57
4.2	Similar Flows: External Flows	58
4.2.1	Similarity Concept	58
4.2.2	Falkner-Skan Equation	58
4.2.3	Solutions of the Falkner-Skan Equation	62
4.3	Similar Flows: Free-Shear Flows	67
4.3.1	Axisymmetric Jet	67
4.3.2	Two-Dimensional Wake	70
4.3.3	Mixing Layer Between Two Uniform Streams	73
4.3.4	Power Laws for the Width and for the Centerline Velocity of Similar Free Shear Layers	75
4.4	Numerical Solution of the Boundary-Layer Equations: Integral Form	76
4.4.1	Pohlhausen Method	76
4.4.2	Thwaites' Method	78
4.4.3	Fortran Program for Thwaites' Method	80
4.5	Numerical Solution of the Boundary-Layer Equations: Differential Form	82
4.5.1	Numerical Formulation	84
4.5.2	Newton's Method	86
4.5.3	Block-Elimination Method	88
	References	89
	Problems	89
	Appendix 4A Shooting Method	100
4A.1	Description of the Method	100
4A.2	Computer Program	101
4A.3	Applications	106
5.	Boundary-Layer Program for External Flows	109
5.1	Introduction	109
5.2	Computer Program	111
5.2.1	MAIN	111
5.2.2	Subroutine INPUT	113
5.2.3	Subroutine IVPL	115
5.2.4	Subroutine GROWTH	116
5.2.5	Subroutine COEF3	117
5.2.6	Subroutine SOLV3	118

5.2.7	Subroutine OUTPUT	122
5.3	Hess-Smith Panel Method	123
5.4	Applications of BLP2D to External Flows	131
5.4.1	Airfoil Flow	131
5.4.2	Ellipse Flow	133
5.4.3	Prolate Spheroid Flow	135
5.5	Applications of BLP2D to Internal Flows	137
5.5.1	Difference Equations When the Momentum Equation Is Expressed in Physical Variables	140
5.5.2	Newton's Method	141
5.5.3	Solution of the Difference Equations	142
5.5.4	Results	143
References	144
Problems	145
Appendix 5A	Matrix Solver Algorithm	160
6.	Transition in Two-Dimensional Flows	165
6.1	Introduction	165
6.2	Transition Process	166
6.3	Linear Stability Theory	169
6.3.1	Boundary Conditions	172
6.3.2	Properties of the Orr-Sommerfeld Equation for Two-Dimensional Flows	173
6.4	Prediction of Transition	177
6.4.1	Empirical Correlations	177
6.4.2	e^n -Method	179
6.4.3	$H-R_x$ Method	181
6.5	Factors that Influence Transition	182
6.5.1	Effects of Freestream Turbulence and Noise	182
6.5.2	Effects of Pressure Gradient	184
6.5.3	Effects of Heat Transfer	187
6.5.4	Effects of Suction	190
6.5.5	Effects of Surface Roughness	193
6.5.6	Effects of Surface Curvature	195
6.6	Numerical Solution of the Orr-Sommerfeld Equation	196
6.6.1	Eigenvalue Procedure for Two-Dimensional Flows	199
6.6.2	Eigenvalue Procedure for Transition	203
References	204

7. Stability-Transition Program for External Flows and Its Applications	215
7.1 Introduction	215
7.2 Computer Program	216
7.2.1 MAIN	216
7.2.2 Subroutine VELPRO	218
7.2.3 Subroutine CSAVE	219
7.2.4 Subroutine NEWTON	223
7.2.5 Subroutine NEWTONI	225
7.3 Stability Diagrams for Blasius Flow	228
7.4 Transition Prediction	229
7.4.1 Flat-Plate Flow	229
7.4.2 Airfoil Flow	229
7.4.3 Ellipse Flow	231
7.4.4 Prolate Spheroid Flow	231
References	232
Problems	232
8. Two-Dimensional Turbulent Flows	237
8.1 Introduction	237
8.2 Composite Nature of a Turbulent Boundary-Layer	237
8.2.1 The Inner Layer: Smooth Surface	238
8.2.2 The Inner Layer: Rough Surface	240
8.2.3 The Outer Layer	243
8.2.4 Summary	245
8.2.5 The Whole Layer	245
8.3 Turbulence Models	249
8.3.1 Zero-Equation Models	250
8.3.2 Two-Equation Models	254
8.3.3 Reynolds Stress Models	257
8.4 Turbulent Boundary-Layers on Smooth and Rough Surfaces with Zero Pressure Gradient	259
8.4.1 Smooth Flat Plate	260
8.4.2 Rough Flat Plate	263
8.5 Turbulent Boundary-Layers with Pressure Gradient: Integral Methods	265
8.6 Turbulent Boundary-Layers with Pressure Gradient: Differential Methods	272
8.6.1 Subroutine EDDY	272
8.6.2 Subroutine IVPT	274

8.7	Free Shear Layers	277
8.7.1	Axisymmetric Jet	277
8.7.2	Two-Dimensional Wake	280
8.7.3	Power Laws for the Width and the Centerline Velocity of Similar Free Shear Layers	281
