PREFACE	v
-------------------	---

PART I—GENERAL THEORY

Chapter I

General Hyperbolic Equations

1.1 The Wave and Hyperbolic Equations	3
1.2 The Cauchy Problem and Characteristics	9
1.3 Mixed Boundary and Initial Value Problems	15
1.4 Non-Linear Equations, Quasi-Linear Systems, and Lipschitz Continuous Solutions	24
1.5 Systems of Quasi-Linear Equations with Many Variables	29
1.6 Quasi-Linear Hyperbolic First Order Systems and Characteristics	33
1.7 Rays and Wave Fronts	40
1.8 Illustrative Examples: The Maxwell Equations	48
1.9 Hydrodynamics	57

Chapter 2

The Method of Characteristics

2.1 Riemann Invariants—Systems with Two Dependent Variables	65
2.2 Generalised Riemann Invariants—System with n Dependent Variables	85
2.3 Mixed Boundary and Initial Value Problems	94
2.4 Propagation of Discontinuities along Wave Fronts	100

Chapter 3

Conservation Laws and Weak Solutions

3.1	Conservation Laws	111
3.2	Weak Solutions	116
3.3	Evolutionary Conditions on Discontinuities in Conservation Laws of Hyperbolic Type	124
3.4	Evolutionary Conditions on a General System	125
3.5	General Shock Relations	130
3.6	Hydrodynamic Discontinuities	135
3.7	Numerical Solution of Non-Linear Hyperbolic Systems	141
3.8	The Propagation of Weak Discontinuities along Rays	149
3.9	Geometrical Acoustics—The Theory of Weak Shock Waves	159

PART II—THE APPLICATION TO MAGNETOHYDRODYNAMICS

Chapter 4

The Fundamental Equations and Characteristics

4.1	Basic Equations and Assumptions	167
4.2	The Adiabatic Reversible System and the Lundquist Equations	170
4.3	The Characteristic Equations	171
4.4	Wave Front Diagram	177
4.5	Propagation of Weak Hydromagnetic Discontinuities	189

Chapter 5

Simple Waves

5.1	Properties of Magnetic Lines of Force	195
5.2	Simple Waves in One-Dimensional Propagation	202

Chapter 6

Magnetohydrodynamic Shocks

6.1	The Conservation Laws	214
6.2	Fast and Slow Shocks	219
6.3	Limit Shocks	238
6.4	Transverse Shocks and Contact Discontinuities	249

Chapter 7

Interaction of Hydromagnetic Waves

7.1	Further Considerations on the Evolutionary Condition . . .	256
7.2	The Piston Problem	259
7.3	Riemann's Problem	276

Chapter 8

Spatial Discontinuities

8.1	Weak Discontinuities in Steady Flows	293
8.2	The Reducible Form of Plane Aligned-Field Flow	299
8.3	Oblique Shock Waves	311
8.4	The Discontinuity in the Static Case	317

Appendices

A.	Basic Theorems in Matrix Theory	321
B.	The Rankine-Hugoniot Relation	327
C.	The Behaviour of X_{\neq}^{\pm}	331
D.	Shock Relations	334
E.	The Representation of the Hydromagnetic Equations	339
F.	Contact Transformations and the Legendre Transformation .	347
