CONTENTS

1. Stochastic fluctuations in membrane potential - - - - - 1

1.1 Thermal or Johnson-Nyquist Noise - - - - - - - 4

1.2 Shot Noise - - - - - - - - - - - - - - - - - - 6

1.3 Flicker Noise - - - - - - - - - - - - - - - - 7

1.4 Conductance fluctuations - - - - - - - - - - - 13

1.5 References - - - - - - - - - - - - - - - - - - 16

2. Quantal Fluctuations in Generator Potential - - - - - - 20

2.1 Psychophysical Evidence for Quantal Sensitivity in Vision 21

2.2 Some Neural Machines - - - - - - - - - - - - - - - 23

2.3 Fluctuations in the Limulus Eccentric Cell Generator Potential - 26

2.4 References - 37

3. Models of Action Potential Initiation - - - - - - - - - 40

3.1 The Logical Neurone - - - - - - - - - - - - - - - 41

3.2 The Perfect Integrator Model - - - - - - - - - - - 45

3.3 The Leaky Integrator Model - - - - - - - - - - - - 49

3.4 Two-Time Constant Models - - - - - - - - - - - - - 51

3.5 The Hodgkin-Huxley Equations - - - - - - - - - - - 52

3.6 Reduced Hodgkin-Huxley Equations - - - - - - - - - 58

3.7 References - 64

4. Fluctuations in Excitability - - - - - - - - - - - - - 67

4.1 Single Time Constant Models with Fluctuating Threshold 68

4.2 Two-Time Constant Models with Fluctuating Threshold - 70

4.3 Fluctuations in Hodgkin-Huxley variables - - - - - - 71

4.4 Models with Time-varying Threshold - - - - - - - - - 76

4.5 References - 82

5. Statistical Properties of a Spike Train - - - - - - - - - 84

5.1 Stationarity - 86

5.2 Interval Densities and Distributions - - - - - - - - - 87

5.3 Spectral Densities of Point Processes - - - - - - - - 92

5.4 Input-Output Relations - - - - - - - - - - - - - - - - 99

5.5 References - 111

6. Random Walk Models - - - - - - - - - - - - - - - - - - - 115

6.1 The Random Walk Model - - - - - - - - - - - - - - - - 116

6.2 The Probability of First Passage - - - - - - - - - - - 116

6.3 The Interval Probability Density - - - - - - - - - - - 118

6.4 A Diffusion Approximation - - - - - - - - - - - - - - 119

6.5 Introduction of a Reflecting Barrier - - - - - - - - - 121

6.6 Generalization of the Random Walk as a Birth and Death Process - 121

6.7 Birth and Death Process Model of the Leaky Integrator 124

6.8 More Complex Random Walks - - - - - - - - - - - - - - 127

6.9 Some Comments on the Random Walk Models - - - - - - - 129

6.10 References - 130

7. Diffusion Models - 131

7.1 The Input Process - - - - - - - - - - - - - - - - - - 132

7.2 The Wiener Process - - - - - - - - - - - - - - - - - - 134

7.3 The Ornstein-Uhlenbeck Process - - - - - - - - - - - - 136

7.4 The Diffusion Equations - - - - - - - - - - - - - - - 137

7.5 The First Passage Time Distribution - - - - - - - - - 141

7.6 The SIPIT Model - - - - - - - - - - - - - - - - - - - 144

7.7 The SILIT Model - - - - - - - - - - - - - - - - - - - 154

7.8 The Inverse Approach to Diffusion Models - - - - - - - 162

7.9 References - 165

8. Superposition Models - - - - - - - - - - - - - - - - - - 169

8.1 Some General Properties of Superposed Processes - - 171

8.2 Superposition of Regular Generator Trains - - - - - 172

8.4 Some Applications of Superposition Theory - - - - - 180

8.5 References - 185

9. Collision Models - - - - - - - - - - - - - - - - - - - 187

9.1 The Mechanism of Collision - - - - - - - - - - - - 187

9.2 The Geometry of Collision - - - - - - - - - - - - 190

9.3 Mutual Interaction Between Two Non-adjacent Generator Sites - 194

9.4 The Biology of Collision - - - - - - - - - - - - - 196

9.5 References - 198

10. Gating and Selective Interaction Models - - - - - - - - 200

10.1 Compound Exponential Distributions and Gating Models 202

10.2 Selective Interaction Models - - - - - - - - - - - 211

10.3 Models with Sub-threshold Interactions - - - - - - - 217

10.4 Neural Micro-nets with Reciprocal Inhibition - - - - 224

10.5 References - 229

11. Models of Synaptic Transmission - - - - - - - - - - - 235

11.1 The neuro-muscular junction - - - - - - - - - - - 237

11.2 Spontaneous miniature end-plate potentials - - - - - 240

11.3 Presynaptic depolarization enhanced release - - - - 247

11.4 Models of facilitation and depression - - - - - - - 254

11.5 Transmitter induced fluctuations in conductance - - 258

11.6 Dynamics of signal transfer across a synapse - - - - 268

11.7 References - 280

12. Models of the stochastic activity of neural aggregates 286

12.1 Nets of logical neurones - - - - - - - - - - - - - - 289

12.2 Networks continuous in time and space: a field approach 300

12.3 Temporal behaviour of nets of excitatory and inhibitory neurones - 308

12.4 Spatially distributed excitatory and inhibitory sub-populations - 316

12.5 Some qualitative speculations - - - - - - - - - - - - 325

12.6 References - 329

13. Information transmission by model neurones 334

13.1 The axon as a channel - - - - - - - - - - - - - - - - - 338

13.2 Information preservation in a neural chain - - - - - - 339

13.3 Signal detection - - - - - - - - - - - - - - - - - - - 343

13.4 Tranmission of steady signals using a rate code - - - 344

13.5 Information transmission of periodic signals - - - 351

13.6 Transmission of stochastic, time-varying signals - - - 355

13.7 Transinformations of different codes - - - - - - - - - 358

13.8 References - 361
