

CONTENTS

INTRODUCTION	3
1 MATHEMATICAL PRELIMINARIES	7
1.1 Algebraic Caveats, 8	
1.2 Mathematical Terminology, Notation, and Subscripting, 12	
1.3 Tables and Tabular Calculations, 13	
1.4 The Summation Operation (Sigma Operator), 15	
1.5 Basic Set Terminology, 17	
1.6 Set Operations, 19	
1.7 Counting Problems, 25	
1.8 Graphing and Diagrams, 32	
1.9 Tree Diagrams, 33	
1.10 Summary, 35	
2 THE ANALYSIS OF STATISTICAL DATA	41
2.1 Types of Statistical Data, 42	
2.2 The Organization of Data, 43	
2.3 Special Frequency Distributions, 47	
2.4 Histograms, 49	
2.5 Measures of Location, 50	
2.6 Measures of Variation, 56	
2.7 Measures of Skewness and Kurtosis, 60	
2.8 The Coefficient of Variation, 63	
2.9 Chebyshev's Inequality, 65	
2.10 Summary, 66	
3 PROBABILITY	69
3.1 Definitions, 71	
3.2 Basic Rules of Probability, 73	

- 3.3 Conditional Probability, 80
- 3.4 Statistical Independence, 82
- 3.5 The Rule of Elimination, 87
- 3.6 Bayes' Rule, 91
- 3.7 Independent Trials, 93
- 3.8 Summary, 98

4 PROBABILITY DISTRIBUTIONS

103

- 4.1 Functions and Random Variables, 103
- 4.2 Parameters and Moments, 107
- 4.3 Continuous Probability Theory, 109
- 4.4 Expected Values, 110
- 4.5 Marginal, Joint, and Conditional Probability Distributions, 114
- 4.6 Some Properties of Joint Distributions, 117
- 4.7 Discrete Probability Distributions, 117
- 4.8 Continuous Probability Distributions, 127
- 4.9 Summary, 134

5 SAMPLING AND SAMPLING DISTRIBUTIONS

139

- 5.1 Simple Random Sampling, 139
- 5.2 The Sampling Distribution of a Statistic, 142
- 5.3 Sampling from a Finite Population, 143
- 5.4 The Law of Large Numbers, 148
- 5.5 The Central Limit Theorem, 149
- 5.6 The Sampling Distribution of the Mean, 150
- 5.7 The Sampling Distribution of the Difference Between Two Means, 151
- 5.8 The Chi-Square Distribution, 152
- 5.9 The Distribution of the Sample Variance from Normal Populations, 153
- 5.10 Student's t Distribution, 154
- 5.11 Fisher's F Distribution, 154
- 5.12 Summary, 155

6 STATISTICAL ESTIMATION

159

- 6.1 Properties of Estimators, 160
- 6.2 Maximum Likelihood Estimators, 165
- 6.3 Point and Interval Estimates, 167
- 6.4 One-Sided and Two-Sided Confidence Intervals, 171

6.5	Estimating Population Means, 174	
6.6	Estimating Population Proportions, 177	
6.7	Estimating a Population Variance, 181	
6.8	Estimating Required Sample Size, 182	
6.9	Summary, 184	
7	STATISTICAL HYPOTHESIS TESTING	187
7.1	The General Procedure for Tests of Hypothesis, 189	
7.2	Specifying the Null and Alternate Hypothesis, 190	
7.3	Types of Errors in Hypothesis Testing, 193	
7.4	Establishing a Decision Rule, 194	
7.5	One-Tailed and Two-Tailed Tests, 195	
7.6	Operating Characteristics and Power Curves, 198	
7.7	Controlling Error Probabilities, 205	
7.8	Testing Hypotheses About Means, 208	
7.9	Testing Hypotheses About the Difference Between Two Means, 213	
7.10	Testing Hypotheses About Proportions, 216	
7.11	Testing the Difference Between Two Proportions, 221	
7.12	Testing Variances, 222	
7.13	Summary, 226	
8	SIMPLE REGRESSION AND CORRELATION	229
8.1	Scatter Diagram, 230	
8.2	Linear Curve Fitting, 231	
8.3	The Standard Error of the Regression, 237	
8.4	Statistical Inferences in Simple Regression Analysis, 239	
8.5	Curvilinear Curve Fitting and Inference, 245	
8.6	Measures of Association and Their Interpretation, 251	
8.7	Summary, 256	
9	ANALYSIS OF VARIANCE	264
9.1	Test for the Difference of Several Means— Basic Approach, 265	
9.2	Test for the Difference of Several Means— Practical Approach, 270	
9.3	Comparison of Several Means, 273	
9.4	Two Variables of Classification, 276	
9.5	Additivity in the Two-Variables-of-Classification Model, 281	

9.6	Two Variables of Classification with Replication, 284	
9.7	More Complex Models, 289	
9.8	Associated Topics, 292	
9.9	Summary, 293	
10	MULTIPLE REGRESSION AND CORRELATION	300
10.1	Statistical Measures in Multiple Regression Analysis, 301	
10.2	Multiple, Partial, and Simple Correlation Coefficients, 306	
10.3	Statistical Inferences in Multiple Regression Analysis, 314	
10.4	Interdependence and Relevancy of the Independent Variables, 316	
10.5	Multiple Curvilinear Regression, 325	
10.6	Summary, 326	
11	NONPARAMETRIC STATISTICS	331
11.1	Contingency Tables, 333	
11.2	The Sign Test and Some Variations, 344	
11.3	Rank Tests, 346	
11.4	Tests Based on Runs, 351	
11.5	The Kolmogorov-Smirnov Statistic, 353	
11.6	Corner Test for Association, 354	
11.7	Summary, 357	
12	TIME SERIES ANALYSIS	362
12.1	The Classical Models, 365	
12.2	The Secular Trend, 368	
12.3	The Moving Average, 374	
12.4	Seasonal Relatives, 377	
12.5	The Cyclical Movement, 384	
12.6	Other Methods of Time Series Analysis, 387	
12.7	Limitations and Summary, 390	
13	BAYESIAN DECISION THEORY	396
13.1	The General Decision Problem, 397	
13.2	Risk and Uncertainty, 398	

13.3	The States of Nature, 399
13.4	Payoff and Opportunity Loss Tables, 400
13.5	Decision-making Criteria, 404
13.6	Bayes' Criterion, 408
13.7	Two-Action Problems Where the Payoff Functions Are Linear, 413
13.8	The Expected Value of Perfect Information, 416
13.9	Sampling and the Revision of Probabilities, 418
13.10	Extensive Form Analysis, 422
13.11	Expected Value of Sample Information, 424
13.12	Optimal Sample Size, 426
13.13	Normal Prior Distribution, 427
13.14	Estimating Parameters of the Normal Prior Distribution, 429
13.15	Decisions Based on the Normal Prior with No Sampling, 432
13.16	The Expected Value of Perfect Information in the Normal Case, 433
13.17	Parameters of the Posterior Normal Distribution, 434
13.18	EYSI in the Normal Case, 436
13.19	Summary, 437

APPENDIX TABLES

I	Cumulative Normal Distribution	445
II	Binomial Distribution Function	447
III	Cumulative Binomial Distribution	451
IV	Poisson Distribution Function	455
V	Cumulative Poisson Distribution	459
VI	Percentage Points of the t Distribution	462
VII	Percentage Points of the χ^2 Distribution	463
VIII	Percentage Points of the F Distribution	464
IX	Unit Normal Loss Function	472
X	Exponential Function	473
XI	Significant Studentized Ranges for Multiple Range Test	474
XII	Functions of Numbers	476
XIII	Random Digits	478
	Index	479
