CHAPTER 1 INTRODUCTION	1
1.1 Specification and misspecification of the econometric model	1
1.2 The purpose and scope of this study	5
CHAPTER 2 PRELIMINARY MATHEMATICS	6
2.1 Random variables, independence, Borel measurable functions and mathematical expectation	6
2.1.1 Measure theoretical foundation of probability theory	6
2.1.2 Independence	10
2.1.3 Borel measurable functions	10
2.1.4 Mathematical expectation	13
2.2 Convergence of random variables and distributions	17
2.2.1 Weak and strong convergence of random variables	17
2.2.2 Convergence of mathematical expectations	22
2.2.3 Convergence of distributions	24
2.2.4 Convergence of distributions and mathematical expectations	29
2.3 Uniform convergence of random functions	33
2.3.1 Random functions. Uniform strong and weak convergence	33
2.3.2 Uniform strong and weak laws of large numbers	38
2.4 Characteristic functions, stable distributions and a central limit theorem	43
2.5 Unimodal distributions	48
CHAPTER 3 NONLINEAR REGRESSION MODELS	51
3.1 Nonlinear least-squares estimation	51
3.1.1 Model and estimator	51
3.1.2 Strong consistency	54
3.1.3 Asymptotic normality	58
3.1.4 Weak consistency and asymptotic normality under weaker conditions	64
3.1.5 Asymptotic properties if the error distribution has infinite variance. Symmetric stable error distributions	65
3.2 A class of nonlinear robust M-estimators	69
3.2.1 Introduction	69
3.2.2 Strong consistency	71
3.2.3 Asymptotic normality	73
3.2.4 Properties of the function $h(\gamma)$. Asymptotic efficiency and robustness	76
3.2.5 A uniformly consistent estimator of the function $h(\gamma)$	79

	Page	
3.2.6	A two-stage robust M-estimator	83
3.2.7	Some weaker results	88
3.3	Weighted nonlinear robust M-estimation	88
3.3.1	Introduction	88
3.3.2	Strong consistency and asymptotic normality	90
3.3.3	A two-stage weighted robust M-estimator	93
3.4	Miscellaneous notes on robust M-estimation	97
3.4.1	Uniform consistency	97
3.4.2	The symmetric unimodality assumption	100
3.4.3	The function ρ	101
3.4.4	How to decide to apply robust M-estimation	101
CHAPTER 4 NONLINEAR STRUCTURAL EQUATIONS		106
4.1	Nonlinear two-stage least squares	107
4.1.1	Introduction	107
4.1.2	Strong consistency	108
4.1.3	Asymptotic normality	111
4.1.4	Weak consistency	114
4.2	Minimum information estimators: introduction	114
4.2.1	Lack of instruments	114
4.2.2	Identification without using instrumental variables	115
4.2.3	Consistent estimation without using instrumental variables	117
4.2.4	Asymptotic normality	118
4.2.5	A problem concerning the nonsingularity assumption	123
4.3	Minimum information estimators: instrumental variable and scaling parameter	125
4.3.1	An instrumental variable	125
4.3.2	An example	126
4.3.3	A scaling parameter and its impact on the asymptotic properties	130
4.3.4	Estimation of the asymptotic variance matrix	133
4.3.5	A two-stage estimator	134
4.3.6	Weak consistency	137
4.4	Miscellaneous notes on minimum information estimation	137
4.4.1	Remarks on the function $S_{-n}^*(\theta \gamma)$	137
4.4.2	A consistent initial value	141
4.4.3	An upperbound of the variance matrix	145
4.4.4	A note on the symmetry assumption	146

	Page
CHAPTER 5 NONLINEAR MODELS WITH LAGGED DEPENDENT VARIABLES	148
5.1 Stochastic stability	148
5.1.1 Stochastically stable linear autoregressive processes	148
5.1.2 Multivariate stochastically stable processes	156
5.1.3 Other examples of stochastically stable processes	157
5.2 Limit theorem for stochastically stable processes	161
5.2.1 A uniform weak law of large numbers	161
5.2.2 Martingales	166
5.2.3 Central limit theorem for stochastically stable martingale differences	168
5.3 Dynamic nonlinear regression models and implicit structural equations	172
5.3.1 Dynamic nonlinear regression models	172
5.3.2 Dynamic nonlinear implicit structural equations	173
5.4 Remarks on the stochastic stability concept	174
CHAPTER 6 SOME APPLICATIONS	177
6.1 Applications of robust M-estimation	177
6.1.1 Municipal expenditure	177
6.1.2 An autoregressive model of money demand	182
6.2 An application of minimum information estimation	187
