

# CONTENTS

<b>CHAPTER 1</b>	<b>Sets</b>	<b>1</b>
	<i>1.1 Sets 1, 1.2 Set operations 4, 1.3 Finite and infinite sets 6, 1.4 Non-denumerable sets 8, 1.5 Cartesian product 9, 1.6 Relations 14, 1.7 Functions 18, 1.8 Ordered sets 23, 1.9 Linear point sets 27, Notes and References 36.</i>	
<b>CHAPTER 2</b>	<b>Functions and Limits</b>	<b>38</b>
	<i>2.1 Metric space 38, 2.2 Neighborhood and point of accumulation 41, 2.3 Sequence 47, 2.4 Limit of sequence 50, 2.5 Cauchy sequence 55, 2.6 Limit of a function 58, 2.7 Continuity 63, 2.8 Necessary and sufficient conditions 67, Notes and References 69.</i>	
<b>CHAPTER 3</b>	<b>Differentiation</b>	<b>71</b>
	<i>3.1 The derivative 71, 3.2 Rules of differentiation 78, 3.3 Differentials 90, 3.4 Logarithms 96, 3.5 Derivative of exponential functions 101, 3.6 Cost curves 103, 3.7 Demand curve 104, 3.8 Other illustrations 106, Notes and References 107.</i>	
<b>CHAPTER 4</b>	<b>Functions of Several Variables</b>	<b>109</b>
	<i>4.1 Functions of two variables 109, 4.2 Partial derivatives 111, 4.3 Geometrical presentation of partial derivatives 113, 4.4 Differentials, total differential</i>	

**CHAPTER 4 Functions of Several Variables—Continued**

115, 4.5 *Second and higher-order differentials* 123, 4.6 *Functions—total derivative* 133, 4.7 *Implicit functions* 151, 4.8 *Higher-order differentiation of implicit functions* 156, 4.9 *Homogeneous functions* 158, 4.10 *Euler's theorem* 166, 4.11 *Partial elasticities* 169, *Notes and References* 170.

**CHAPTER 5 Maxima and Minima of Functions** 171

5.1 *Increasing and decreasing functions* 171, 5.2 *Convexity of curves* 173, 5.3 *Maxima and minima of functions of one variable* 179, 5.4 *Maxima and minima of functions of two or more variables* 187, 5.5 *Maxima and minima with subsidiary conditions—Lagrange multiplier method* 196, 5.6 *Maxima and minima with subsidiary conditions (II)* 207, 5.7 *Combining the Lagrange multiplier method and the differential method* 217, 5.8 *Competitive equilibrium of a firm* 221, 5.9 *Monopoly price and output* 222, 5.10 *Discriminating monopolist* 224, 5.11 *Equilibrium conditions for a producer* 225, 5.12 *Adding-up theorem* 226, 5.13 *Method of least squares* 228, *Notes and References* 229.

**CHAPTER 6 Integration** 231

6.1 *Riemann integral* 231, 6.2 *Numerical methods for evaluating the integral* 235, 6.3 *Fundamental theorem of the calculus* 239, 6.4 *Techniques of integration* 244, 6.5 *Improper integrals* 258, 6.6 *Multiple integrals* 262, 6.7 *Evaluation of multiple integrals* 263, 6.8 *Total cost, marginal cost* 264, 6.9 *Law of growth* 265, 6.10 *Domar's model of public debt and national income* 271, 6.11 *Domar's capital expansion model* 272, 6.12 *Capitalization* 274, 6.13 *Paret distribution* 274, *Notes and References* 275.

**CHAPTER 7 Series** 278

7.1 *Series* 278, 7.2 *Geometric series* 279, 7.3 *Taylor's theorem* 280, 7.4 *Taylor series* 285, 7.5

**CHAPTER 7** *Series—Continued*

*Exponential series* 286, *7.6 Taylor's theorem for several independent variables* 287, *7.7 Complex numbers* 288, *7.8 Inequalities* 293, *Notes and References* 295.

**CHAPTER 8** **Differential Equations**

297

*8.1 Introduction* 297, *8.2 Solutions* 301, *8.3 Non-linear differential equations of the first order and first degree* 302, *8.4 Case I—variables separable case* 302, *8.5 Case II—differential equation with homogeneous coefficients* 303, *8.6 Case III—exact differential equations* 305, *8.7 Linear differential equations of the first order* 307, *8.8 Linear differential equation of second order with constant coefficient* 309, *8.9 Domar's capital expansion model* 313, *Notes and References* 314.

**CHAPTER 9** **Difference Equations**

316

*9.1 Finite differences* 316, *9.2 Some operators* 319, *9.3 Difference equations* 320, *9.4 Solutions* 321, *9.5 Homogeneous linear difference equation with constant coefficients* 323, *9.6 Geometric interpretation of solutions* 328, *9.7 Particular solutions of non-homogeneous linear equations* 329, *9.8 Linear first-order difference equations* 330, *9.9 Linear second-order difference equations with constant coefficients* 332, *9.10 Interaction between the multiplier and acceleration principle* 337, *Notes and References* 437.

**CHAPTER 10** **Vectors and Matrices (Part I)**

348

*10.1 Vectors* 348, *10.2 Vector spaces* 358, *10.3 Linear dependence* 360, *10.4 Basis* 361, *10.5 A matrix* 362, *10.6 Elementary operations* 364, *10.7 Matrix algebra* 367, *10.8 Equivalence* 375, *10.9 Determinants (I)* 377, *10.10 Determinants (II)* 391, *10.11 Inverse matrix* 397, *10.12 Linear and quadratic forms* 404, *10.13 Linear transformations* 408, *10.14 Orthogonal transformations* 419, *10.15 Rank of a matrix* 421, *Notes and References* 430.

**CHAPTER 11**  $\vee$  **Vectors and Matrices (Part II)****432**

*11.1 Characteristic equation of a square matrix* 432, *11.2 Similar matrices* 434, *11.3 Characteristic vector* 435, *11.4 Diagonalization of a square matrix* 437, *11.5 Orthogonal transformations* 440, *11.6 Diagonalization of real, symmetric matrices* 445, *11.7 Non-negative quadratic forms* 451, *11.8 Determining the sign of a quadratic form* 463, *11.9 Maxima and minima of functions* 472, *11.10 Partitioned matrices* 483, *11.11 Partitioned inverse* 485, *11.12 Differentiation of matrices and determinants* 487, *11.13 Differentiation of determinants* 490, *11.14 Idempotent matrix* 493, *11.15 Matrix series* 494, *11.16 Non-negative square matrices* 498, *Notes and References* 508.

**CHAPTER 12**  $\vee$  **Vectors and Matrices (Part III)****512**

*12.1 Introduction* 512, *12.2 Descartes' rule of sign* 516, *12.3 Expansion of a characteristic equation* 517, *12.4 Solution of simultaneous linear equations* 518, *12.5 Stability conditions (I)—Schur theorem* 532, *12.6 Translation of a higher-order difference equation to a lower order* 526, *12.7 Solving simultaneous difference equations* 528, *12.8 Stability conditions (II)* 533, *12.9 Stability conditions (III)* 535, *12.10 Stability conditions (IV)—Routh theorem* 537, *12.11 Stability conditions (V)* 539, *12.12 Stability conditions (VI)* 544, *12.13 Convex sets* 546, *Notes and References* 555.

**CHAPTER 13** **Probability and Distributions****558**

*13.1 Sample space* 558, *13.2 A class of sets* 559, *13.3 Axioms* 560, *13.4 Random variable (Part I)* 562, *13.5 Conditional probability* 563, *13.6 Distribution function* 567, *13.7 Expectation variance* 572, *13.8 Distributions* 575, *13.9 The central limit theorem* 578, *13.10 Random variable (Part II)* 581, *13.11 Jacobian transformations* 586, *Notes and References* 589.

**CHAPTER 14 Statistical Concepts—Estimation 592**

*14.1 Introduction 592, 14.2 Unbiasedness 593, 14.3 Consistency 593, 14.4 Efficiency 594, 14.5 Sufficiency 600, 14.6 Method of maximum likelihood (ML) 602, 14.7 Interval estimation 607, Notes and References 612.*

**CHAPTER 15 Testing Hypotheses 614**

*15.1 The two-decision problem 614, 15.2 Decision rules and sample space 615, 15.3 Appraisal of decision rules 617, 15.4 Admissible rules 620, 15.5 The Neyman-Pearson theory 622, 15.6 The minimax rule 632, 15.7 The likelihood-ratio test 633, Notes and References 637.*

**CHAPTER 16 Regression Analysis 639**

*16.1 Introduction 639, 16.2 Model I—one independent variable case 640, 16.3 Model I—two independent variable case 643, 16.4 Model 2 647, 16.5 Model 2—continued 653, 16.6 Estimate of the variances 657, 16.7 Bivariate normal distribution 661, 16.8 Matrix notation 668, 16.9 Moment notation 674, Notes and References 678.*

**CHAPTER 17 Correlation 680**

*17.1 Introduction 680, 17.2 Simple correlation coefficient 680, 17.3 Partial correlation coefficients 686, 17.4 Multiple correlation coefficient 688, Notes and References 690.*

**CHAPTER 18 Game Theory 691**

*18.1 Introduction 691, 18.2 Rectangular game 692, 18.3 Rectangular game with saddle points 694, 18.4 Mixed strategies 696, Notes and References 701.*
