
CONTENTS

Part I. Statistical Principles Underlying Nonparametric Methods 1

1. *Nonparametric and Distribution-Free Procedures 3*
2. *Probabilistic and Statistical Concepts Necessary for
Nonparametric and Distribution-Free Procedures 7*
 - 2-1. *Structure of Nonclassical Statistical Methods 7*
 - 2-2. *Rules on Counting 9*
 - 2-3. *Types of Statistical Variables 14*
 - 2-4. *Continuity, Treatment of Ties, and Corrections
for Continuity in Nonparametric and Distribution-
Free Ties 17*
 - 2-5. *Probability Model for Equally Likely Events 20*
 - 2-6. *Discrete Random Variables 24*
 - 2-7. *Linear Compounds and the Algebra of Expected
Values 27*
 - 2-8. *Planned and Post Hoc Comparisons 27*
 - 2-9. *The Role of the Normal Distribution 29*
 - 2-10. *The Role of the Chi-Square Distribution 32*
 - 2-11. *Student's t Distribution and the F
Distribution 33*

2-12.	<i>The Sampling Distribution of an \bar{X} in Finite and Infinite Populations</i>	34
	<i>Exercises</i>	35

3. *The Binomial and Sign Tests: One-Sample Procedures for Dichotomous Variables* 39

3-1.	<i>One-Sample Procedures for Dichotomous Variables</i>	39
3-2.	<i>Introduction to the Sign Test</i>	39
3-3.	<i>The Binomial Distribution</i>	41
3-4.	<i>The Binomial Test of $H_0: p = p_0$ Versus $H_1: p \neq p_0$</i>	44
3-5.	<i>The Sign Test: A Special Case of the One-Sample Binomial Test</i>	45
3-6.	<i>The Large-Sample Form of the Binomial Test</i>	47
3-7.	<i>Large-Sample Confidence Interval for the Parameter of the Binomial Distribution</i>	50
3-8.	<i>The Sign Test for the Matched-Pairs Design</i>	50
3-9.	<i>Tables of the Binomial for $p = \frac{1}{2}$</i>	53
3-10.	<i>The Large-Sample Approximation to the Sign Test</i>	54
3-11.	<i>The Sign Test in the One-Sample Location Problem</i>	55
3-12.	<i>Tied Observations in the Sign Test</i>	57
3-13.	<i>One-Sample Confidence Interval for the Population Median and Median Difference</i>	58
3-14.	<i>The Power Curve for the Sign Test</i>	60
3-15.	<i>Combined Sign Tests</i>	62
3-16.	<i>The Cox-Stuart Test for Trend</i>	65
	<i>Summary</i>	69
	<i>Exercises</i>	72

4. *Statistical Efficiencies of Nonparametric and Distribution-Free Tests* 77

4-1.	<i>Introduction to Efficiency Comparisons</i>	77
4-2.	<i>Estimate Efficiency</i>	80
4-3.	<i>Test Efficiency</i>	82
4-4.	<i>Theoretical Distributions Used in Efficiency Determinations</i>	87
4-5.	<i>Robustness</i>	88
4-6.	<i>Other Characteristics of Nonparametric Procedures</i>	89
	<i>Summary</i>	90
	<i>Exercises</i>	91

Part II. Statistical Methods for Qualitative Variables: Contingency Table Hypotheses of Homogeneity and Correlation for Independent and Related Samples 93

5. *The Irwin–Fisher Test: Two-Sample Procedures for Dichotomous Variables* 96
 - 5–1. *Introduction to the Irwin–Fisher Test* 96
 - 5–2. *The Hypergeometric Distribution* 97
 - 5–3. *The Irwin–Fisher Exact Test of Significance of $H_0: p_1 = p_2$* 100
 - 5–4. *Significance Tables for the Irwin–Fisher Test* 105
 - 5–5. *The Large-Sample Approximation of the Normal Distribution to the Hypergeometric Distribution* 106
 - 5–6. *The Large-Sample Approximation to the Irwin–Fisher Exact Test* 107
 - 5–7. *Large-Sample Confidence Interval for $\Delta = p_1 - p_2$* 110
 - 5–8. *Power of the Irwin–Fisher Exact Test* 111
 - 5–9. *Combining Irwin–Fisher Tables* 112
 - 5–10. *Correction for Continuity in 2×2 Irwin–Fisher Tables* 115
 - 5–11. *The Two-Sample Median Test, A Special Case of the Irwin–Fisher Test* 116
 - Summary 119
 - Exercises 122

6. *Chi-Square Tests of Homogeneity of Proportions for Qualitative Variables in Multiple Independent Samples* 127
 - 6–1. *Extension of the Median Test to More than Two Populations* 127
 - 6–2. *The K-Sample Binomial Test for Equal Proportions* 131
 - 6–3. *Karl Pearson’s Chi-Square Test of Homogeneity of Distributions* 134
 - 6–4. *Partitioning of Chi-Square in Tests of Homogeneity* 138
 - 6–5. *Post Hoc Multiple Comparisons in Sample Proportions for Tests of Homogeneity* 141
 - 6–6. *Multiple Comparisons for Proportions Based on the Arcsine Transformation* 147
 - 6–7. *Planned Multiple Comparisons in Sample Proportions for Tests of Homogeneity* 151

6-8.	<i>Contrasts in the $I \times K$ Test of Homogeneity</i>	153
6-9.	<i>Explained Variance in Tests of Homogeneity</i>	154
	<i>Summary</i>	157
	<i>Exercises</i>	160
7.	<i>Chi-Square Tests of Homogeneity of Proportions for Qualitative Variables in Correlated Samples</i>	164
7-1.	<i>Correlated Proportions</i>	164
7-2.	<i>The McNemar Test for 2×2 Tables</i>	167
7-3.	<i>Large-Sample Approximations to the McNemar Test</i>	169
7-4.	<i>Confidence Interval for $\psi = p_{.1} - p_{1.}$ of the McNemar Test</i>	170
7-5.	<i>The Bowker Extension of the McNemar Test to a Test of Symmetry in a Square Contingency Table</i>	171
7-6.	<i>The Stuart Extension of the McNemar Test to a Test of Equality of Correlated Marginal Probabilities in a Square Contingency Table</i>	174
7-7.	<i>The Cochran Q Test</i>	176
7-8.	<i>Post Hoc Procedures for the Cochran Test</i>	180
	<i>Summary</i>	181
	<i>Exercises</i>	185
8.	<i>One-Sample Chi-Square Tests of Independence and Correlation and Measures of Association for Qualitative Variables</i>	188
8-1.	<i>Exact Test of Independence for Two Dichotomous Variables</i>	188
8-2.	<i>Blomqvist's Double-Median Test for Association</i>	192
8-3.	<i>The Large-Sample Form of the Karl Pearson One-Sample Test of Independence, or Lack of Correlation Between Two Dichotomous Variables</i>	194
8-4.	<i>Chi-Square Test of Independence for an $R \times C$ Contingency Table</i>	196
8-5.	<i>Tests for Trend in Contingency Tables</i>	198
8-6.	<i>Computing Formula for Chi-Square</i>	202
8-7.	<i>The Mean-Square Contingency Coefficient</i>	203
8-8.	<i>The Phi Coefficient for 2×2 Contingency Tables</i>	205
8-9.	<i>Goodman's $\hat{\psi}$ as a Measure of Association on a 2×2 Table</i>	207
8-10.	<i>Goodman's Simultaneous Confidence-Interval Procedure for $R \times C$ Contingency Tables Using Cross-Product Ratios</i>	209

8-11.	<i>Combining Data from Independent $R \times C$ Contingency Tables</i>	212
	<i>Summary</i>	214
	<i>Exercises</i>	217
9.	<i>Chi-Square Tests of Independence in Contingency Tables for Three or More Variables</i>	223
9-1.	<i>Interaction Hypotheses in Multidimensional Contingency Tables</i>	223
9-2.	<i>Nonparametric Interaction Analysis of K Two-Sample Binomial Tables</i>	223
9-3.	<i>Tests for First- and Second-Order Interactions</i>	229
9-4.	<i>Tests of Equality of Association Over K Independent Populations</i>	230
9-5.	<i>Tests of Second-Order Interactions in $I \times J \times K$ Contingency Tables</i>	235
	<i>Summary</i>	240
	<i>Exercises</i>	241
10.	<i>Tests of Goodness of Fit</i>	243
10-1.	<i>The Approximation of X_v^2 by X_v^2</i>	243
10-2.	<i>The Karl Pearson Goodness-of-Fit Test</i>	247
10-3.	<i>The Kolmogorov Goodness-of-Fit Test</i>	248
10-4.	<i>The Lilliefors Test</i>	249
10-5.	<i>The Kolmogorov-Smirnov Test</i>	250
	<i>Summary</i>	251
	<i>Exercises</i>	253

Part III. Statistical Methods for Quantitative Variables. Test and Confidence-Interval Procedures for Nonparametric Analysis-of-Variance Designs for Independent and Related Samples 261

11.	<i>Two-Sample Methods for Quantitative Variables Based on Ranks and Normal Scores</i>	264
11-1.	<i>Fisher's Randomization Two-Sample t Test</i>	264
11-2.	<i>The Wilcoxon (Mann-Whitney) Two-Sample Test</i>	267
11-3.	<i>Point and Interval Estimates for the Median Difference</i>	273
11-4.	<i>Large-Sample Approximation for the Wilcoxon Test and Mann-Whitney Test</i>	274

- 11-5. *The Two-Sample Tests Based on Normal Scores* 278
- 11-6. *The Terry-Hoeffding Normal-Scores Test* 280
- 11-7. *The Van der Waerden Normal-Scores Test* 283
- 11-8. *The Bell-Doksum Normal-Scores Test* 285
- 11-9. *The Large-Sample Form of the Normal-Scores Tests* 286
- 11-10. *The Siegel-Tukey Test for Equal Variability* 289
- 11-11. *The Mood Test for Equal Variances* 290
- 11-12. *The Klotz Test for Equal Variances* 291
- 11-13. *Test of Equal Slopes for Two Regression Lines* 293
- Summary* 295
- Exercises* 298
12. ***Multiple-Sample Methods for Quantitative Variables Based on Ranks and Normal Scores: The Nonparametric One-Way Analysis of Variance*** 299
- 12-1. *The Kruskal-Wallis Test* 299
- 12-2. *Multiple Confidence-Interval Procedures for the Kruskal-Wallis Test* 306
- 12-3. *Partitioning of Chi-square for the Kruskal-Wallis Test* 308
- 12-4. *Hodges-Lehmann Estimators for the Kruskal-Wallis Test* 310
- 12-5. *Pairwise Contrast Based on Multiple Two-Sample Wilcoxon Tests* 312
- 12-6. *The Normal-Scores Test for the K-Sample Problem* 313
- 12-7. *Multiple Confidence-Interval Procedures for the Normal-Score K-Sample Test* 315
- 12-8. *The Kruskal-Wallis Test for Ordered Contingency Tables* 315
- 12-9. *The Variance of a Contrast When There Are Many Ties in the Kruskal-Wallis Test* 318
- Summary* 318
- Exercises* 320
13. ***Nonparametric One- and Two-Sample Tests for Repeated Measures and Matched Samples*** 325
- 13-1. *Repeated Measures and Correlated Samples* 325
- 13-2. *Fisher's Exact Test in the Matched-Pair Problem* 326
- 13-3. *The Wilcoxon Matched-Pair Test* 330

13-4.	<i>Zero and Tied Differences in the Wilcoxon Matched-Pair Test</i>	333
13-5.	<i>Tables of the Wilcoxon Matched-Pair Statistic</i>	334
13-6.	<i>Confidence Interval for Δ, the Median Difference</i>	335
13-7.	<i>Hodges-Lehmann Estimate of the Median Difference</i>	337
13-8.	<i>Large-Sample Approximation for the Wilcoxon Matched-Pair Test</i>	337
13-9.	<i>One-Sample Test for the Median</i>	340
13-10.	<i>Normal Scores in the Matched-Pair Problem</i>	342
13-11.	<i>Power Comparisons of the Matched-Pair Tests</i>	345
13-12.	<i>The Wilcoxon Matched-Pair Test for Determining whether the Slope of a Regression Line Is Different from Zero</i>	346
13-13.	<i>Point and Interval Estimate of the Slope of a Regression Line</i>	348
	<i>Summary</i>	349
	<i>Exercises</i>	350
14.	<i>Nonparametric Tests for Repeated Measures and Matched Samples for Multiple Samples: The Friedman Model</i>	354
14-1.	<i>The K-Matched-Sample Problem</i>	354
14-2.	<i>The Friedman Test</i>	355
14-3.	<i>The Friedman Test as a Substitute for the Classical F Test</i>	357
14-4.	<i>The Sign Test as a Friedman Test</i>	361
14-5.	<i>Post Hoc Procedures for the Friedman Test</i>	362
14-6.	<i>Planned Comparisons in the Friedman Model</i>	365
14-7.	<i>Rosenthal and Ferguson Multiple Confidence Intervals</i>	367
14-8.	<i>Multiple Matched-Pair Wilcoxon Tests</i>	369
14-9.	<i>Normal Scores in the K-Sample Matched-Pair Problem</i>	371
14-10.	<i>Post Hoc Procedures for the Normal-Scores Matched-Sample Problem</i>	372
14-11.	<i>Power Comparisons of the Three K-Matched-Sample Tests</i>	373
14-12.	<i>The Page Test of Monotonic Ordered Treatment Effects</i>	374
14-13.	<i>Friedman Test for Two or More Observations per Experimental Unit</i>	376
14-14.	<i>Durbin's Test for Balanced Incomplete Block Designs</i>	379

14–15.	<i>Combined Friedman Tests for Unequal Sample Sizes</i>	384
	<i>Summary</i>	385
	<i>Exercises</i>	388
15.	<i>Block Designs and Tests on Aligned Observations</i>	393
15–1.	<i>Blocking in Experimental and Observational Studies</i>	393
15–2.	<i>Combined Wilcoxon Tests for Blocked Data</i>	394
15–3.	<i>The Two-Treatment Hodges–Lehmann Test for Aligned Observations</i>	396
15–4.	<i>Normal Scores in the Two-Sample Aligned Model</i>	400
15–5.	<i>The K-Sample Rank Test for Aligned Observations for Equal-Sized Samples</i>	401
15–6.	<i>Post Hoc Procedures for the Hodges–Lehmann Test for Equal-Sized Samples</i>	405
15–7.	<i>Normal Scores in the K-Sample Alignment Model</i>	406
15–8.	<i>Planned and Post Hoc Comparisons for the K-Sample Aligned Normal-Scores Test</i>	409
15–9.	<i>The K-Sample Test for Aligned Observations for Unequal-Sized Samples</i>	410
15–10.	<i>Tests of Interaction in Replicated Factorial Designs Based on Alignment</i>	414
15–11.	<i>Post Hoc Confidence Intervals for the $E(g_{.jk})$ of the Aligned Test for Interaction</i>	418
15–12.	<i>Normal Scores in the Aligned Test for Interaction</i>	418
15–13.	<i>Efficiency Measures of Aligned Tests</i>	419
15–14.	<i>Winsorized and Trimmed Means</i>	420
	<i>Summary</i>	421
	<i>Exercises</i>	425
16.	<i>Tests of Independence and Measures of Association for Quantitative Variables</i>	429
16–1.	<i>Exact Tests of Independence for Two Quantitative Variables: The Pitman Correlation Coefficient</i>	429
16–2.	<i>The Spearman Rank-Correlation Coefficient</i>	431
16–3.	<i>Tied Ranks and r_s</i>	435
16–4.	<i>The Large-Sample Test of $\rho_s = 0$</i>	437
16–5.	<i>Normal Scores in the Pearson Product-Moment Correlation Coefficient</i>	438
16–6.	<i>Measures of Concordance and Discordance as Measures of Correlation</i>	439

16-7.	<i>Distribution Theory of Tau</i>	442
16-8.	<i>Large-Sample Distribution of τ and Nonparametric Tests for Monotonic Relationships</i>	443
16-9.	<i>Correction for τ Where There Are Tied Observations</i>	444
16-10.	<i>Ordered Contingency Tables: Test for Monotonic Trend for Two Ordered Qualitative Variables</i>	446
16-11.	<i>Test for Trend in the Kruskal-Wallis Model</i>	449
16-12.	<i>Test for Trend in the Friedman Model</i>	452
16-13.	<i>Kendall's Tau as a Nonparametric Point-Biserial Correlation</i>	453
16-14.	<i>Tau and Phi for 2×2 Contingency Tables</i>	454
16-15.	<i>Kendall's Measure of Partial Correlation</i>	456
16-16.	<i>Kendall's Coefficient of Concordance</i>	458
16-17.	<i>Sampling Distribution of W</i>	461
16-18.	<i>Tied Values and W</i>	461
16-19.	<i>Coefficient of Concordance for the Durbin Model</i>	462
16-20.	<i>Paired Comparisons as a Durbin-Type Test</i>	464
16-21.	<i>Goodman and Kruskal's Gamma: A Measure of Association for Ordered Contingency Tables</i>	466
16-22.	<i>A Partial Coefficient for Goodman and Kruskal's Gamma</i>	470
	<i>Summary</i>	471
	<i>Exercises</i>	476
	<i>Appendix: Tables</i>	481
