

Table of Contents

1.	The Development of Mathematical Demography	1
1.1	Introduction	2
1.2	Demography Before the Eighteenth Century	2
1.3	The Life Table – Definitions and Consequences	7
1.4	The Life Table – Practical Considerations as a Population Model	17
1.5	Early Models of Population Projections	22
1.6	Mortality and Survival Revisited	31
1.7	Conclusion	34
1.8	Notes for Chapter One	35
2.	An Overview of the Stable Theory of Population	37
2.1	Introduction	38
2.2	Duration of Events Compared to Time	39
2.3	Population Pyramids and Age-Specific Considerations	41
2.4	Classical Formulation of the Stable Theory of Population	50
2.5	An Overview of Deterministic Models in Stable Population Theory	51
2.6	Conclusion	56
2.7	Notes for Chapter Two	57
3.	The Discrete Time Recurrence Model	59
3.1	Introduction	60
3.2	Linear Recurrence Equations – A Pandect	60
3.3	The Discrete Time Recursive Stable Population Model	67
3.4	Conclusion	73
3.5	Notes for Chapter Three	73
4.	The Continuous Time Model	75
4.1	Introduction	76
4.2	The Development of the Continuous Time Model	76

4.3	Solution of the Continuous Model According to Lotka	82
4.4	Considerations on the Continuous Model According to Feller . . .	87
4.5	Asymptotic Considerations	90
4.6	Conclusion	92
4.7	Notes for Chapter Four	93
5.	The Discrete Time Matrix Model	95
5.1	Introduction	96
5.2	Development of the Discrete Time Matrix Model	96
5.3	Population Stability and the Matrix Model	100
5.4	Stable Theory when the Eigenvalues are Distinct	104
5.5	Stable Theory with Eigenvalues Not all Distinct	112
5.5.1	The case of 2 distinct eigenvalues	114
5.5.2	The case of p distinct eigenvalues	119
5.6	Conclusion	124
5.7	Notes for Chapter Five	125
6.	Comparative Aspects of Stable Population Models	127
6.1	Introduction	128
6.2	Similarities Among the Stable Models	128
6.3	Differences Among the Stable Models	131
6.4	Conclusion	132
6.5	Notes for Chapter Six	132
7.	Extensions of Stable Population Theory	133
7.1	Introduction	134
7.2	Some Parameters of Stable Population Theory	134
7.3	Some Fertility Measures in Stable Population Theory	139
7.4	Some Applications of Stable Population Theory	143
7.5	Perturbations of Stable Population Theory	150
7.6	Conclusion	152
7.7	Notes for Chapter Seven	152
8.	The Kingdom of Denmark – A Demographic Example	155
8.1	Introduction	156
8.2	A Chronological Summary of Demographic Data Retrieval in Denmark	157
8.3	Migration, Mortality and Fertility in Denmark	159
8.4	Conclusion	170
8.5	Notes for Chapter Eight	173

Appendix	175
The Continuous Time Model According to McKendrick – von Foerster	175
References	179
Index	183
