CONTENTS

Chapter I: A Preview of Geometric Programming 1

1 Posynomials 1
2 The Geometric Mean 2
3 Minimization Problems 3
4 The Dual Function 4
5 An Optimum Design Problem 5
6 Approximate Determination of a Minimum 6
7 The Maximum of the Dual Function 7
8 Determination of the Minimizing Point 8
9 Constrained Minima 9
10 Degree of Difficulty 11
11 Some Advantageous Features 12

Chapter II: Linear and Convex Programming 16

1 The Farkas Lemma and Some of Its Implications 16
2 The Simplex Method 33
3 Convexity 47
4 Convex Programming and the Kuhn-Tucker Theorem 60

Chapter III: Basic Concepts and Techniques of Geometric Programming 77

1 Primal Programs and Dual Programs 78
2 The Duality Theory 80

3 Some Properties of Primal Programs and Dual Programs 81
4 Systematic Procedures 88
5 Approximation Techniques 97
6 Limiting Techniques 100

Chapter IV: The Duality Theory of Geometric Programming by Way of Lagrange Multipliers 110

1 The Geometric Inequality and the Main Lemma 110
2 Proof of the Duality Theory 117
3 Proof of the Concavity of Log v 121

Chapter V: Engineering Design by Geometric Programming 127

1 Example in Mechanical Engineering—Sea Power 127
Engineering principles 127
Solution by geometric programming 132
2 Example in Electrical Engineering—Transformers 140
Engineering principles 140
Types of design objectives 146
Application of geometric programming and general conclusions derived therefrom 148

Chapter VI: A Refined Duality Theory 164

1 The Strong Duality Theorem 164
2 A Classification of Geometric Programs 167
3 Proof of the Strong Duality Theorem 171
4 Canonical Programs 173
5 Degenerate Programs 187

Chapter VII: Extended Geometric Programming 195

1 Abstract Geometric Inequalities 195
2 The First and Second Duality Theorems for Extended Geometric Programming 198
3 Particular Geometric Inequalities and Related Example Problems 208
4 Convex Homogeneous Functions and a Related Class of Geometric Inequalities 215
5 Applications in Approximation Theory 226

Appendix A **The Farkas Lemma** 244

Appendix B **The Perturbation of Optimized Parameters due to Variations in the Posynomial Coefficients** 247

Appendix C **Chemical Equilibrium Treated by Geometric Programming** 255

Appendix D **Expressing Linear Programs as Geometric Programs** 265
