

Contents Volume II

States in Quantum Statistical Mechanics	1
5.1. Introduction	3
5.2. Continuous Quantum Systems. I	6
5.2.1. The CAR and CCR Relations	6
5.2.2. The CAR and CCR Algebras	15
5.2.3. States and Representations	24
5.2.4. The Ideal Fermi Gas	46
5.2.5. The Ideal Bose Gas	58
5.3. KMS States	77
5.3.1. The KMS Condition	77
5.3.2. The Set of KMS States	116
5.3.3. The Set of Ground States	133
5.4. Stability and Equilibrium	147
5.4.1. Stability of KMS States	147
5.4.2. Stability and the KMS Condition	180
	vii

5.4.3. Gauge Groups and the Chemical Potential	203
5.4.4. Passive Systems	217
Notes and Remarks	223
Models of Quantum Statistical Mechanics	239
6.1. Introduction	241
6.2. Quantum Spin Systems	243
6.2.1. Kinematical and Dynamical Descriptions	243
6.2.2. The Gibbs Condition for Equilibrium	263
6.2.3. The Maximum Entropy Principle	269
6.2.4. Translationally Invariant States	289
6.2.5. Uniqueness of KMS States	307
6.2.6. Nonuniqueness of KMS States	319
6.2.7. Ground States	334
6.3. Continuous Quantum Systems. II	348
6.3.1. The Local Hamiltonians	350
6.3.2. The Wiener Integral	361
6.3.3. The Thermodynamic Limit. I. The Reduced Density Matrices	376
6.3.4. The Thermodynamic Limit. II. States and Green's Functions	391
6.4. Conclusion	417
Notes and Remarks	419
References	453
Books and Monographs	455
Articles	457
List of Symbols	471
Subject Index	483
Corrigenda to Volume I	503
