

# TABLE OF CONTENTS

PREFACE	VII
ACKNOWLEDGEMENTS	IX
ORGANISING COMMITTEE	IX
LIST OF PARTICIPANTS	IX
JÜRGEN EHLERS / Survey of General Relativity Theory	
0. Introduction	1
1. Quasi-Historical, Empirical Motivation of the General Theory of Relativity	2
2. A Constructive-Axiomatic Approach to General Relativity Theory	22
3. Kinetic Theory	55
4. Continuum Mechanics and Thermodynamics	89
5. The Transition from Maxwell's Equations to Geometrical Optics	99
6. Note on the Dynamics of Extended Bodies	101
7. Approximation Methods	106
8. Spherically Symmetric Spacetimes	114
References	122
DIETER R. BRILL / Observational Contacts of General Relativity	
1. Introduction	127
2. Fundamental Properties of Gravity	128
3. Alternative Theories and Solar System Experiments	132
4. Experiments on Gravitational Radiation	142
References	150
JAMES B. HARTLE / Relativistic Stars, Gravitational Collapse, and Black Holes	
1. Introduction	153
2. The Relativistic Stellar Structure of Spherical Stars	154
3. Spherically Symmetric Gravitational Collapse	166
4. Non-Spherical Gravitational Collapse and Black Holes	178
5. Black Hole Dynamics	188
Acknowledgements	194
References	194
R. K. SACHS / Cosmology	
1. Introduction	197
2. General Methods	200

3. The Geometry of the Hot Einstein De Sitter Model	213
4. Evolution of the Hot Einstein De Sitter Model	221
5. Inhomogeneous Models	227
6. Homogeneous Anisotropic Spacetimes	231
7. Conclusion	235
Acknowledgements	235
References	235

#### KAREL KUCHARŤ / Canonical Quantization of Gravity

1. Parametrized Theories	238
2. Geometrodynamics	250
3. Quantization	262
4. Midi-superspace	271
Acknowledgements	283
Bibliography	283

#### B. SCHMIDT / Differential Geometry from a Modern Standpoint

1. Manifolds	289
2. The Tangent Space	290
3. Dual Space of the Tangent Space Tensors	292
4. Commutators and Exterior Derivative of Forms	296
5. Maps between Manifolds	298
6. Lie Groups and Lie Transformation Groups	300
7. The Frame Bundle of a Manifold	305
8. The Lie Derivative	308
9. Covariant Derivative – Linear Connection	310
10. Descriptions of a Linear Connection	311
11. Curvature Tensor and Structure Equations	315
12. The Connection Induced by a Metric	318
13. Geodesics	320
References	322

#### INDEX OF SUBJECTS
