Preface by General Editor *v*

Authors' introduction *vii*

1 Assessment and mathematics

Introduction *1*

What does the teacher want to know? *4*

The language of mathematics *5*

The importance of presentation *7*

Choice of solution and what this reveals *10*

2 Mathematics questions

Introduction *14*

Question clarity *15*

Diagrams *19*

Writing good questions *24*

3 Marking and marks

Introduction *27*

Marking process *28*

Measurement and scales *30*

Validity of marks *33*

Methods of assessment *34*

4 Standardized tests

An example of norm-referencing *36*

Standardized scores *37*

Comparing scores *40*

Criterion-referenced assessment *42*

Value of criterion-referencing in affective measurement *45*

5 Testing for progress

What is progress? *49*

Theories of cognitive development *50*

Recognizing progress *54*

Standardized tests: their usefulness and their drawbacks *55*

Inclined difficulty tests *61*

Attainment checklist *66*

6 Diagnosis

- Testing for diagnosis 72
- Analysis of test results 75
- Error diagnosis 77

7 Records and reports

- Keeping records 80
- Ways of keeping class records 81
- Giving reports 85

Appendix: Compendium of tests 89
