Preface	v
1 The classical risk model	1
1.1 Ruin probabilities for the classical risk process	4
1.2 “Practical” evaluation of ruin probabilities	13
1.3 Inference for the risk process	25
2 Generalizations of the classical risk model	33
2.1 Models allowing for size fluctuation	33
2.2 Models allowing for risk fluctuation	41
3 Renewal models	57
3.1 Ordinary renewal models	57
3.2 Stationary renewal models	67
3.3 Numerical illustrations	70
4 Cox models	77
4.1 Markovian intensity: Preliminaries	77
4.2 The martingale approach	92
4.3 Independent jump intensity	95
4.3.1 An inbedded random walk	98
4.3.2 Ordinary independent jump intensity	101
4.3.3 Stationary independent jump intensity	103
4.4 Markov renewal intensity	105
4.5 Markovian intensity	112
4.5.1 Application of the basic approach	112
4.5.2 An alternative approach	113
4.6 Numerical illustrations	119
5 Stationary models	125

Appendix. Finite time ruin probabilities	135
A.1 The classical model	136
A.2 Renewal models	145
A.3 Cox models	152
A.4 Diffusion approximations	159
References and author index	167
Subject index	173

INSERTED SURVEYS

Basic martingale theory	9 – 10
Basic facts about weak convergence	15 – 16
Point processes and martingales	38 – 40
Point processes and random measures	41 – 53
Basic definitions	41
Superposition of point processes	44
Thinning of point processes	45
Basic Markov process theory	78 – 83
Stationary point processes	128 – 132
