Table of Contents

Preface ix

Part I: The Case for Teaching Statistics and Probability

1. Why Teach Statistics and Probability—a Rationale 1

Lionel Pereira-Mendoza, Memorial University of Newfoundland, St. John's, Newfoundland
Jim Swift, Nanaimo District Senior Secondary School, Nanaimo, British Columbia

An introduction to the other articles in the yearbook, demonstrating that statistics and probability should be taught for utility, for future study, and for aesthetic reasons.

Part II: Samples of Existing Courses or Programs

2. Experiential Statistics and Probability for Elementary Teachers 8

William A. Juraschek, University of Colorado at Denver, Denver, Colorado
Nancy S. Angle, University of Colorado at Denver, Denver, Colorado

An activity approach to statistics and probability for prospective elementary teachers.

3. Teaching Statistics to Eleven-to-Sixteen-Year-Olds: An Account of Some Development Work in England and Wales ... 18

Peter Holmes, Schools Council Project on Statistical Education, University of Sheffield, Sheffield, England
Daphne Turner, Schools Council Project on Statistical Education, University of Sheffield, Sheffield, England

A widely tested project using topical modules to teach statistics to British students.

4. An Elementary Course in Nonparametric Statistics 24

Albert M. Liebetrau, Johns Hopkins University, Baltimore, Maryland

Nonparametric statistics is increasingly important. A sample course is outlined, and some detailed examples are presented.

Part III: Classroom Activities

5. Graphically Speaking: Primary-Level Graphing Experiences 33

Laura Duncan Choate, La Paloma School, Fallbrook, California
JoAnn King Okey, La Paloma School, Fallbrook, California

(Preschool-Grade 3) A range of graphing activities, moving from concrete to abstract.

6. Using Teaching Devices for Statistics and Probability with Primary Children 41

Kathleen A. Knowler, Arizona State University, Tempe, Arizona
Lloyd A. Knowler, University of Iowa, Iowa City, Iowa

(Kindergarten-Grade 3) Primary-level activities—graphing, sorting, measuring, estimating, playing games—using statistics and probability.

7. Statistical Sampling and Popsicle Sticks 45

Jerry Shryock, Western Illinois University, Macomb, Illinois

(Grades 2-6) Sampling from a population of colored Popsicle sticks and making predictions about the population.

8. Fair Games, Unfair Games 49

George W. Bright, Northern Illinois University, DeKalb, Illinois
John G. Harvey, University of Wisconsin—Madison, Madison, Wisconsin
Margariete Montague Wheeler, Northern Illinois University, DeKalb, Illinois

(Grades 4-8) Appealing classroom games to refine the notions of fairness and unfairness.

9. Developing Some Statistical Concepts in the Elementary School 60

Harry Bohan, Sam Houston State University, Huntsville, Texas
Edith J. Moreland, Houston Independent School District, Houston, Texas

(Grades 3-6) Graphical and pictorial techniques for determining the mean, median, and mode.

10. Triples: A Game to Introduce the Facts of Chance 64

Eris Bailey, Towson Senior High School, Towson, Maryland

(Grades 6-8) Using the game of triples to reinforce computation, to introduce probability, and to practice decision making.

11. Random Digits and Simulation 70

Edward Silver, San Diego State University, San Diego, California
J. Philip Smith, Southern Connecticut State College, New Haven, Connecticut

(Grades 6–9) Generating random digits and examining sequences for randomness. Simulating a water-flow situation.

12. The Student Price Index 73

C. Gail Tibbo Lenoski, Statistics Canada, Vancouver, British Columbia

(Grades 10–12) Making a student price index as a class project.

13. The Statistics Odds Room 83

Thomas E. Obremski, Ohio State University, Columbus, Ohio

(Grades 10–12) Unusual and motivating games of chance used at Ohio State's annual High School Day.

Part IV: Teaching and Learning Specific Topics

14. Misconceptions of Probability: From Systematic Errors to Systematic Experiments and Decisions 90

J. Michael Shaughnessy, Oregon State University, Corvallis, Oregon

Common misconceptions about probability. Decisions based on the misconceptions *representativeness* and *availability*.

15. Some Statistical Paradoxes 100

H. E. Reinhardt, University of Montana, Missoula, Montana

A collection of paradoxes and apparent paradoxes. Useful for class exploration and discussion.

16. Simple Graphical Techniques for Examining Data Generated by Classroom Activities 109

Carolyn Alexander Maher, Rutgers University, New Brunswick, New Jersey

Applying new techniques (the stem-and-leaf plot and the median-hinge box-plot) to random walks and Markov chains.

17. Random Digits and the Programmable Calculator 118

Lennart Råde, Comprehensive School Mathematics Program, St. Louis, Missouri (Gothenburg, Sweden)

How to generate random digits with a programmable calculator. Applying random digits in simulation activities.

18. Correlation, Junior Varsity Style 126

Annette N. Matsumoto, University of Hawaii Laboratory School, Honolulu, Hawaii

A presentation of correlation at a level appropriate for junior high school.

19. An Area Model for Solving Probability Problems 135

Richard D. Armstrong, Comprehensive School Mathematics Program, St. Louis, Missouri

Applying area notions to solving probability problems. Appropriate for upper elementary grades through junior high school.

20. Geometrical Probability 143

Richard Dahlke, University of Michigan—Dearborn, Dearborn, Michigan

Robert Fakler, University of Michigan—Dearborn, Dearborn, Michigan

A thorough development of geometric probability with examples and applications appropriate for high school or community college.

21. Evaluating Exact Binomial and Poisson Probabilities without Tables 154

Harry O. Posten, University of Connecticut, Storrs, Connecticut

A computer algorithm for generating classical probability distributions.

Part V: Applications

22. Paradoxes in Sampling 162

Clifford H. Wagner, Pennsylvania State University—Capitol Campus, Middletown, Pennsylvania

Use and misuse of the principle of indifference. Why the famous *Literary Digest* poll of 1936 was wrong. Present-day applications for sampling.

23. Using *Consumer Reports* as a Resource for Data Analysis in the Statistics Classroom 168

John W. McConnell, Glenbrook South High School, Glenview, Illinois

Choosing stereo loudspeakers and evaluating the quality of food at fast-food chains.

24. Applications of Statistics and Probability to Genetics 173

Hunter Ballew, University of North Carolina, Chapel Hill, North Carolina

Looking at the role of statistics and probability in the development of genetics from Gregor Mendel's time to the present day.

Part VI: Statistical Inference

25. Activities in Inferential Statistics 182

Barry V. Kissane, University of Western Australia, Nedlands, Australia

Making inferences based on sampling a population. The central limit theorem and its role in statistical inference.

26. Statistical Inference in Junior High and Middle School 194

Walter J. Sanders, Indiana State University, Terre Haute, Indiana

Studying chance variability in sampling. Using sampling results to infer population characteristics.

Part VII: Monte Carlo Techniques and Simulation

27. Monte Carlo Simulation: Probability the Easy Way 203

Ann E. Watkins, Los Angeles Pierce College, Los Angeles, California

How to use Monte Carlo simulations in the classroom. A number of motivational examples.

28. Using Monte Carlo Methods to Teach Probability and Statistics 210

Kenneth J. Travers, University of Illinois at Urbana, Urbana, Illinois

A brief history of Monte Carlo methods. Examples applying these methods to a variety of areas in statistics and probability.

Part VIII: Using Computers

29. Solving Probability Problems through Computer Simulation . . . 220

William Inhelder, Herbert Hoover High School, Glendale, California

A computer program for investigating extrasensory perception.

30. In All Probability, a Microcomputer 225

Howard M. Kellogg, Fiorello H. LaGuardia Community College, Long Island City, New York

Using a microcomputer to study a tontine, to estimate the area of a region by Monte Carlo techniques, and to simulate the Buffon needle problem.

Bibliography (compiled by *Stuart A. Choate*) 234

Projects (compiled by *Ralph H. Klitz, Jr.*) 239
