PART I A CONGRESS SURVEY	
1 Preliminaries and planning	4
2 The programme	8
3 The congress in action	13
4 The work of congress	13
5 The congress in retrospect	72
PART II THE INVITED PAPERS	
George Pólya, As I read them	77
Jean Piaget, Comments on mathematical education	79
Sir James Lighthill, The Presidential Address	88
Hans Freudenthal, What groups mean in mathematics and what they should mean in mathematical education	101
David Hawkins, Nature, man and mathematics	115
Edmund Leach, Some anthropological observations on number, time and common-sense	136
Hugh Philp, Mathematical education in developing countries – some problems of teaching and learning	154
S. L. Sobolev, Some questions of mathematical education in the USSR	181
René Thom, Modern mathematics: does it exist?	194
PART III A SELECTION OF CONGRESS PAPERS	
Edith Biggs, Investigation and problem-solving in mathematical education	213

CONTENTS

E. Fischbein, Intuition, structure and heuristic methods in the teaching of mathematics	page 222
Anthony J. Malpas, Mathematics and science in the secondary school	233
Bruce E. Meserve, Geometry as a gateway to mathematics	241
J. B. Morgan, The International Baccalaureate	254
Toshio Shibata, The role of axioms in contemporary mathematics and in mathematical education	262
Mary Sime, Implications of the work of Piaget in the training of students to teach primary mathematics	272
Hassler Whitney, Are we off the track in teaching mathematical concepts?	283
<i>Appendices</i>	
1 The congress committees and officers	299
2 The working groups	300
3 ICMI and congress recommendations	305
4 Films and videotapes on mathematics and its teaching	307
<i>Index</i>	315
