

# Contents

## Chapter 1

<b>The General Linear Model I</b>	1
1.1 Introduction	1
1.2 Model Specification and Estimation	3
1.3 Goodness of Fit	16
Questions and Problems	24
Appendix	26

## Chapter 2

<b>The General Linear Model II</b>	34
2.1 Generalities	34
2.2 Distribution of the Estimator of $\beta$	35
2.3 General Linear Restriction: Estimation and Tests	51
2.4 Mixed Estimators and the Bayesian Approach	62
Questions and Problems	67
Appendix	69

## Chapter 3

<b>The General Linear Model III</b>	98
3.1 Generalities	98
3.2 Violation of Standard Error Process Assumptions	99
Questions and Problems	144
Appendix	146

## Chapter 4

<b>The General Linear Model IV</b>	185
4.1 Multicollinearity: Failure of the Rank Condition	186
4.2 Analysis of Variance: Categorical Explanatory Variables	206
4.3 Analysis of Covariance: Some Categorical and Some Continuous Explanatory Variables	216

## Chapter 5

<b>Misspecification Analysis and Errors in Variables</b>	218
5.1 Introduction	218
5.2 Misspecification Analysis	220
5.3 Errors in Variables (EIV): Bivariate Model	242
5.4 Errors in Variables (EIV): General Model	250
5.5 Misspecification Error Analysis for EIV Models	261
Questions and Problems	266

## Chapter 6

<b>Systems of Simultaneous Equations</b>	269
6.1 Introduction	269
6.2 The Simultaneous Equations Model (SEM): Definitions, Conventions, and Notation	269
6.3 The Identification Problem	277
6.4 Estimation of the GLSEM	287
6.5 Prediction from the GLSEM	301
6.6 The GLSEM and Undersized Samples	310
6.7 Maximum Likelihood (ML) Estimators	315
Questions and Problems	320

## Chapter 7

<b>Discrete Choice Models: Logit and Probit Analysis</b>	324
7.1 Introduction	324
7.2 The Nature of Discrete Choice Models	325
7.3 Formulation of Dichotomous Choice Models	326
7.4 A Behavioral Justification for the Dichotomous Choice Model	330
7.5 Inapplicability of OLS Procedures	331
7.6 Maximum Likelihood Estimation	334
7.7 Inference for Discrete Choice Models	336
7.8 Polytomous Choice Models	338
Appendix	340

## Chapter 8

<b>Statistical and Probabilistic Background</b>	353
8.1 Multivariate Density and Distribution Functions	353
8.2 The Multivariate Normal Distribution	362
8.3 Point Estimation	376
8.4 Elements of Bayesian Inference	387
Questions and Problems	397

<b>Tables for Testing Hypotheses on the Autoregressive Structure of the Errors in a GLM</b>	399
---------------------------------------------------------------------------------------------	-----

## Appendix: Mathematics for Econometrics

A.1 Vectors and Vector Spaces	421
A.1.1 Complex Numbers	421
A.1.2 Vectors	424
A.1.3 Vector Spaces	426
A.2 Matrix Algebra	428
A.2.1 Basic Definitions	428
A.2.2 Basic Operations	430
A.2.3 Rank and Inverse of a Matrix	432
A.2.4 Hermite Forms and Rank Factorization	438
A.2.5 Trace and Determinants	443
A.2.6 Computation of the Inverse	452
A.2.7 Partitioned Matrices	454
A.2.8 Kronecker Products of Matrices	460
A.2.9 Characteristic Roots and Vectors	462
A.2.10 Orthogonal Matrices	474
A.2.11 Symmetric Matrices	477
A.2.12 Idempotent Matrices	484
A.2.13 Semidefinite and Definite Matrices	485
A.3 Linear Systems of Equations and Generalized Inverses of Matrices	497
A.3.1 Introduction	497
A.3.2 Conditional, Least Squares, and Generalized Inverses of Matrices	498
A.3.3 Properties of the Generalized Inverse	501
A.3.4 Solutions of Linear Systems of Equations and Pseudoinverses	508
A.3.5 Approximate Solutions of Systems of Linear Equations	512
A.4 Vectorization of Matrices and Matrix Functions: Matrix Differentiation	518

A.4.1	Introduction	518
A.4.2	Vectorization of Matrices	518
A.4.3	Vector and Matrix Differentiation	523
A.5 Systems of Difference Equations with Constant Coefficients		541
A.5.1	The Scalar Second-order Equation	541
A.5.2	Vector Difference Equations	548
