Preface xiii
Acknowledgments xvii
Preliminary Notes xix

1 Introduction to Turtle Geometry 3

1.1 Turtle Graphics 3

1.1.1 Procedures 5
1.1.2 Drawing with the Turtle 7
1.1.3 Turtle Geometry versus Coordinate Geometry 11
1.1.4 Some Simple Turtle Programs 15
Exercises for Section 1.1 21

1.2 POLYs and Other Closed Paths 23

1.2.1 The Closed-Path Theorem and the Simple-Closed-Path Theorem 23
1.2.2 The POLY Closing Theorem 26
Exercises for Section 1.2 30

1.3 Looping Programs 32

1.3.1 The Looping Lemma 33
1.3.2 Examples of Looping Programs 36
1.3.3 More on the Looping Lemma 39
1.3.4 Technical Summary 40
1.3.5 Nontechnical Summary 41
Exercises for Section 1.3 41

1.4 Symmetry of Looping Programs 43

1.4.1 The Symmetry of POLY 44
1.4.2 Common Divisors 46
Exercises for Section 1.4 50

2 Feedback, Growth, and Form 55

2.1 The Turtle as Animal 55

2.1.1 Random Motion 56
2.1.2 Directed Motion: Modeling Smell 59
2.1.3 Modeling Sight 62
Exercises for Section 2.1 67

2.2 Turtles Interacting 70

2.2.1 Predator and Prey 70

2.2.2 Following and Chasing 72
Exercises for Section 2.2 75

2.3 Growth 77

2.3.1 Equiangular Spirals 77
2.3.2 Branching Processes: A Lesson in Recursion 81
Exercises for Section 2.3 85

2.4 Recursive Designs 87

2.4.1 Nested Triangles 87
2.4.2 Snowflakes and Other Curves 91
2.4.3 Space-Filling Designs 94
Exercises for Section 2.4 99

3 Vector Methods in Turtle Geometry 105

3.1 Vector Analysis of Turtle Programs 106

3.1.1 Vector Operations: Scalar Multiplication and Addition 108
3.1.2 Vector Representations of Closed Paths 109
3.1.3 POLY Revisited: Rotations and Linearity 110
3.1.4 MULTIPOLYs: Another Application of Vector Analysis 114
3.1.5 Unexpectedly Closed Figures 120
Exercises for Section 3.1 125

3.2 Coordinates for Vectors 129

3.2.1 Vector Operations in Coordinates 130
3.2.2 Rotation in Coordinates: The Linearity Principle 132
Exercises for Section 3.2 135

3.3 Implementing Turtle Vector Graphics on a Computer 136

3.3.1 Turtle State 136
3.3.2 State-Change Operators 137
Summary: A Vector-Based Turtle Implementation 138
Exercises for Section 3.3 138

3.4 Maneuvering a Three-Dimensional Turtle 140

3.4.1 Rotating the Turtle 140
3.4.2 Rotation Out of the Plane 142
3.4.3 The State-Change Operators, in Summary 144

3.5 Displaying a Three-Dimensional Turtle 144

3.5.1 Parallel Projection 145
3.5.2 Dot Product: Another Application of Linearity 148

3.5.3 Parallel Projection in Coordinates; Generalizations 150
3.5.4 Perspective Projection 151
3.5.5 Outline of a Three-Dimensional Turtle Project 153
Exercises for Section 3.5 155

4 Topology of Turtle Paths 161

4.1 Deformations of Closed Paths 161
4.1.1 Turtle Paths: Pictures and Programs 163
4.1.2 Correlating Pictures and Programs 165
4.1.3 Topological Classification of Closed Paths 166
Exercises for Section 4.1 167

4.2 Local and Global Information 175
4.2.1 Escaping From a Maze 176
Exercises for Section 4.2 179

4.3 Deformations of Curves and Planes 180
4.3.1 Proof of the Deformation Theorem 183
Exercises for Section 4.3 188

4.4 Correctness of the Pledge Algorithm 191
4.4.1 Unfair Mazes 192
4.4.2 The Body of the Proof 193
4.4.3 Looping and Finite-State Processes 196
Exercises for Section 4.4 198

5 Turtle Escapes the Plane 201

5.1 Turtle Geometry on a Sphere 201
5.1.1 Turtle Lines 202
5.1.2 Turtle Turning and Trip Turning 205
5.1.3 Angle Excess 207
5.1.4. Excess is Additive 209
5.1.5 Excess and Area 211
Exercises for Section 5.1 213

5.2 Curvature 214
5.2.1 Curvature Density 215
5.2.2 Total Curvature 217
5.2.3 Cylinders 219
5.2.4 Cones 221

5.2.5 Curvature for Curves and Surfaces 223
Exercises for Section 5.2 224

5.3 Total Curvature and Topology 227

5.3.1 Dents and Bends 228
5.3.2 Concentrated Curvature 231
5.3.3 Cutting and Pasting 232
Exercises for Section 5.3 235

6 Exploring the Cube 241

6.1 A Computer Cube 244

6.1.1 Internal Representation 244
6.1.2 Permutations 248
6.1.3 Crossing Edges Using Dot Product 249
6.1.4 Implementing the State-Change Operators 252
6.1.5 Displaying the Cube; Capitalizing on Linearity 253
6.1.6 Summary Outline of the Cube Program 257
6.1.7 Comments on the Cube Program 258
Exercises for Section 6.1 261

6.2 Observations and Questions About Cubes 262

6.2.1 Monogons 262
6.2.2 POLY 264
6.2.3 Other Gons 264
6.2.4 Lines and Distance 265
6.2.5 More Projects 265
6.2.6 Things to Think About 267

6.3 Results 268

6.3.1 The Monogon Problem 268
6.3.2 Headings for Monogons 272
6.3.3 POLYs and Other Looping Programs 274
6.3.4 Another Representation 276
6.3.5 Another Representation Revisited 276
6.3.6 More Distance 277

6.4 Conclusion 278

7 A Second Look at the Sphere 279

7.1 A Computer Simulation 279

7.1.1 Internal Representation 280

7.1.2 Display 282
7.1.3 Distances and Angles 283

7.2 Exploring 283

7.2.1 POLY 283
7.2.2 Symmetry Types 284
7.2.3 Circles 285
7.2.4 Distances 285
7.2.5 Two New Views of Sphere 285

7.3 Results 287

7.3.1 The FORWARD-LEFT Symmetry 287
7.3.2 Net Rotation of a POLY Step 289
7.3.3 The Spherical Pythagorean Theorem 291
7.3.4 Exact Formula for θ 292
7.3.5 Results for Circles 295
7.3.6 Proof of Net Rotation Theorem 298
Exercises for Chapter 7 301

8 Piecewise Flat Surfaces 305

8.1 A Program for Piecewise Flat Surfaces 307

8.1.1 Internal Representation 308
8.1.2 Maintaining the Display 309
8.1.3 Implementing the FORWARD Command 312
8.1.4 Starting to Explore: Surfaces with Only One Face 316
Exercises for Section 8.1 320

8.2 Orientations 323

8.2.1 Nonorientable Surfaces 323
8.2.2 A Program for Nonorientable Surfaces 328
Exercises for Section 8.2 330

8.3 Curvature and Euler Characteristic 331

8.3.1 Curvature of Piecewise Flat Surfaces 331
8.3.2 Euler Characteristic 334
Exercises for Section 8.3 338

9 Curved Space and General Relativity 343

9.1 Wedge Representations 343

9.1.1 A Parable: At the Edge of a Wedge 343
9.1.2 Symmetric Wedge Maps 347

9.1.3 A Computer Simulation 353
Exercises for Section 9.1 355

9.2 Phenomena of Curved Space and Time 359

9.2.1 Curved Space 359
9.2.2 Curved Spacetime 363
9.2.3 The Four Curvature Effects 368
Exercises for Section 9.2 370

9.3 The General Theory of Relativity 372

9.3.1 Gravity as Curvature 373
9.3.2 Rotating World Lines 373
9.3.3 Understanding Lorentz Rotations 377
Exercises for Section 9.3 378

9.4 A Simulator for General Relativity 381

9.4.1 The Coordinate Systems 382
9.4.2 Turning and Leaping 384
9.4.3 The Program 384
9.4.4 Help with Units 386
Exercises for Section 9.4 387

Appendix A: Turtle Procedure Notation 393
Appendix B: Writing Turtle Programs in Conventional Computer Languages 405
Hints for Selected Exercises 423
Answers to Selected Exercises 439
Index 471
