

# C O N T E N T S

## Introduction 1

Exercise of a skill \* a career in mathematics \* teaching mathematics \* spiritual values \* philosophy.

## Chapter I: The Texture of Beauty 10

Ancient standing \* appreciation, given and acquired \* definitions \* evolution of aesthetic faculty \* Plato, Croce, Wordsworth, Coleridge \* unity in variety \* working hypothesis \* structure of the psyche \* emotional activity \* aesthetics \* music \* aesthetic pleasure universal \* creative activity: empathy.

## Chapter II: The Divine Proportion 23

Pythagoras and numbers: music and integers \* the golden section (Euclid) \* Phidias and the Parthenon \* *Phi* ( $\phi$ ), numerical value \* solutions of  $x^2 - x - 1 = 0$  \* geometrical determination of *Phi* \* multiples of  $\pi/5$  \* pentagram or triple triangle: a symbol \* Iamblichus and the Pythagorean brotherhood \* the five Platonic solids.

**Chapter III: Analysis of Beauty**

35

Surprise, wonder, curiosity: an example \* status of *Phi*: mathematical reality \* mathematics, a language \* ubiquity of *Phi* \* *Phi* in trigonometry: multiples of  $18^\circ$  \* the golden triangle \* exercises.

**Chapter IV: Phi and Fi-Bonacci**

46

Additive series \* computer calculation of *Phi* \* geometric fallacy \* the golden series: remarkable properties \* aesthetic claim \* divine proportion and major sixth \* estimation of pitch \* summary \* Binet's formula \* the law of growth.

**Chapter V: Art and the Golden Rectangle**

58

Aesthetic sensibility, inborn and acquired \* "beauty is a word of God" \* definitions \* the divine proportion \* experimental aesthetics (Fechner, Witmar, Lalo, Thorndike) \* the golden ellipse \* the German DIN \* additive squares \* rectangular spiral.

**Chapter VI: Beauty in Mathematics**

70

Ambiguity in title \* clarified by an example: the parabola \* the aesthetically ungifted \* beauty a guide to truth \* ideas in poetry and mathematics \* evolution of aesthetic feeling \* mathematics and music \* why is recollection pleasurable? \* ingredients of beauty \* alternation of tension and relief \* realization of expectation \* surprise \* perception of unsuspected relationships \* patterns \* brevity \* unity in variety \* sensuous pleasure from curves \* wonder, awe, mystery \* the seeing eye.

**Chapter VII: Simple Examples of Aesthetic Interest** 90

A limited anthology \* the pill maker \* triangle limited by the golden ratio \* triangle inscribed in a rectangle \* the cross of Lorraine \* the golden cuboid \* logarithmic spiral.

**Chapter VIII: Further Examples** 103

Motives in teaching mathematics \* trisectors of an angle \* *Phi*; another hiding place \* tetrahedron problem \* two triangles \* logarithm of the golden mean \* *Phi* and the parabola \* golden and conic sections.

**Chapter IX: Patterns** 118

A source of aesthetic pleasure \* chess problems \* Euler's formula \* magic squares (a Fibonacci magic square) \* polygonal numbers \* Fermat's rules.

**Chapter X: Pascal's Triangle and Fibonacci** 131

Pascal's triangle \* Chinese triangle \* probability computation \* more Pascal patterns \* continued fractions \* convergents and the Fibonacci series.

**Chapter XI: The Fibonacci Numbers** 141

Relation to golden ratio \* source of aesthetic feeling \* first forty golden numbers \* Fibonacci series: a geometrical progression \* a practical problem \* coefficients of  $x/(1 - x - x^2)$  \* Binet's formula \* some properties of the Fibonacci sequence \* zero-value determinants.

<b>Chapter XII: Nature's Golden Numbers</b>	<b>151</b>
<p>A poet's view refuted * teleology * Fibonacci and Nature * multiple reflections * Fibonacci and the atom * Leonardo of Pisa * the rabbit problem * the bee hive: genealogy of the drone bee * phyllotaxis: leaf divergence and petal numbers.</p>	
<b>Chapter XIII: Spira Mirabilis</b>	<b>164</b>
<p>The equiangular spiral: the sunflower * sea shells * expressive lines * x-ray picture of the nautilus * various designations * gnomons: D'Arcy Thompson and the law of growth * the golden triangle * polar equation of spiral * musical scale and the spiral * conclusion.</p>
