Preface V

List of Contributors XV

1 Entropic Attraction and Ordering 1

Randall D. Kamien

1.1 Introduction: Entropy as an Organizing Principle 1

1.2 Hard Spheres 2

1.2.1 The Virial Expansion 4

1.2.2 The Depletion Interaction 6

1.2.3 Crowding and Folding 8

1.3 Liquid Crystals 13

1.3.1 Nematic Phases 14

1.3.2 Smectic Phases and Beyond 19

1.4 Crystals 22

1.4.1 Hard Spheres: Free-Volume Theory 22

1.4.2 Areas Versus Volumes 29

1.4.3 Block Copolymers 33

1.5 Summary 36

References 37

2 Phase Transitions in Two-Dimensional Colloidal Systems 41

Hans-Hennig von Grünberg, Peter Keim, and Georg Maret

2.1 Introduction 41

2.2 Theoretical Background 45

2.2.1 Dislocations and Disclinations in Two-Dimensional Crystals 45

2.2.2 Elastic Constants in Two-Dimensional Systems 50

2.2.3 Defects and Energies 52

2.2.4 Melting in Two Stages 55

2.2.5 The Halperin–Nelson Recursion Relations 57

Soft Matter, Vol. 3: Colloidal Order: Entropic and Surface Forces

Edited by G. Gompper and M. Schick

ISBN: 978-3-527-31370-9

2.2.6	Correlation Functions	60
2.2.6.1	The Translational Order	60
2.2.6.2	The Orientational Order	62
2.3	Experiments in Two Dimensions	63
2.3.1	Systems Not Involving Colloids	63
2.3.2	Colloidal Systems with Screened Coulomb Interaction	64
2.3.3	Colloidal Systems with Hard-Core Repulsion	65
2.3.4	Colloidal Systems with Dipole Interaction	65
2.4	Colloidal Experiments and the KTHNY Theory	68
2.4.1	Direct Imaging of Defect Structures	68
2.4.2	Correlations: Translational and Orientational Order	71
2.4.2.1	Structure Factor	71
2.4.2.2	Pair Correlation Functions	72
2.4.3	Elasticity: Macroscopic Criteria of KTHNY Melting	75
2.4.3.1	Young's Modulus	77
2.4.3.2	Frank's Constant	78
2.5	Conclusion	80
	<i>References</i>	83
3	Colloids on Patterned Substrates	87
	<i>Clemens Bechinger and Erwin Frey</i>	
3.1	Introduction	87
3.2	Order and Broken Symmetries in Two Dimensions	90
3.2.1	Discrete Symmetries	92
3.2.1.1	Lenz–Ising Model	92
3.2.1.2	Potts Model	95
3.2.2	Continuous Symmetries	96
3.2.2.1	2D XY Model	96
3.2.2.2	Melting of 2D Solids	97
3.3	Substrate Potentials with One-Dimensional Periodicity	99
3.3.1	Commensurability and Reciprocal Lattice	100
3.3.2	Symmetry-Allowed Phases and Their Description	102
3.3.2.1	Solid Phases	103
3.3.2.2	Smectic Phases	105
3.3.2.3	Modulated Liquid (ML)	108
3.3.3	Phase Diagrams and Phase Transitions	109
3.3.3.1	Roughening Transitions	112
3.3.3.2	Dislocation Unbinding Transitions	113
3.3.4	Creation of Substrate Potentials with Interfering Laser Beams	115
3.3.5	Density and Pair Correlation Functions	118
3.3.5.1	Commensurability Ratio $p = 1$	118
3.3.5.2	Experimental Results for Commensurability Ratio $p = 2$	121

3.3.6	Reentrance Melting	125
3.4	Colloidal Molecular Crystals	131
3.4.1	Colloidal Trimers on Triangular Lattices	134
3.4.2	Colloidal Dimers on Triangular Lattices	138
3.4.3	Fractional Fillings	142
3.5	Commensurate–Incommensurate Transitions	143
3.5.1	Strain-Induced Domain Formation in Adsorbed Monolayers	145
3.5.2	Periodic Pinning Potentials	149
3.6	Summary and Outlook	153
	<i>References</i>	155
4	Inhomogeneous Platelet and Rod Fluids	159
	<i>Ludger Harnau and Siegfried Dietrich</i>	
4.1	Introduction	159
4.1.1	Osmotically Driven Shape-Dependent Colloidal Separation	160
4.1.2	Filter-Cake Consisting of Plate-Like Particles	160
4.1.3	Inner Structure of Polymer – Liquid Crystal Nanotubes	161
4.1.4	Entropically Driven Microphase Transition in Mixtures of Colloidal Rods and Spheres	163
4.1.5	Sterically Mediated Two-Dimensional Aggregates of Gold Nanospheres Directed by DNA	163
4.1.6	Uniaxial Plasmon Coupling Through Longitudinal Self-Assemblies of Gold Nanorods	164
4.1.7	Patterned Alignment of Liquid Crystals	166
4.1.8	Voltage-Dependent Anchoring of a Nematic Liquid Crystal on a Grating Surface	167
4.1.9	Liquid-Crystal Diffraction Grating	168
4.1.10	Reporting Biomolecular and Chemical Events Occurring at Surfaces	170
4.1.11	Liquid-Crystal Colloids	172
4.2	Colloidal Platelet and Rod Fluids	173
4.2.1	Density Functional Theory	173
4.2.2	Homogeneous and Isotropic Bulk Fluids	177
4.3	Colloidal Platelet and Rod Fluids Near a Planar Wall or Confined in a Slit Pore	180
4.3.1	Contact with a Single Planar Hard Wall	180
4.3.1.1	Order Parameters	182
4.3.1.2	Effective Entropic Interactions	185
4.3.1.3	Surface Tension and Excess Adsorption	188
4.3.2	Confinement Between Two Parallel Hard Walls	189
4.3.3	Density Functional Theory for the Zwanzig Model	192
4.3.3.1	Homogeneous Bulk Fluid	195

- 4.3.3.2 Platelet and Rod Fluids Near a Single Hard Wall 196
- 4.3.3.3 Binary Platelet and Rod Fluids Confined by Two Parallel Hard Walls 200
- 4.3.4 Experiments 203
- 4.4 Colloidal Platelet and Rod Fluids Near Curved Surfaces 205
 - 4.4.1 Contact with a Single Curved Hard Wall 206
 - 4.4.1.1 Non-Interacting Platelets and Rods Outside a Spherical Cavity 206
 - 4.4.1.2 Non-Interacting Platelets and Rods Inside a Spherical Cavity 211
 - 4.4.1.3 Influence of Interparticle Interactions 212
 - 4.4.2 Depletion Potential Between Two Spheres 214
 - 4.4.2.1 The Derjaguin Approximation 215
 - 4.4.2.2 Density Functional Approach 218
 - 4.4.3 Entropic Force and Torque Acting on a Single Platelet or Rod 221
 - 4.4.4 Colloidal Mixtures of Spheres and Platelets or Rods 225
 - 4.4.4.1 Density Functional and Fundamental Measure Theory 225
 - 4.4.4.2 Bulk Phase Diagram 230
 - 4.4.4.3 Binary Sphere–Platelet Mixture Near a Planar Hard Wall 232
 - 4.4.5 Remarks on Theories of Colloidal Mixtures of Convex Bodies 234
 - 4.4.5.1 Evaluation of Sphere–Platelet Mayer Function 234
 - 4.4.5.2 Bulk Excess Free Energy 237
 - 4.4.5.3 Free Volume Fraction 238
 - 4.4.6 Experiments 239
- 4.5 Rod Fluids Near Geometrically Structured Substrates 243
 - 4.5.1 Rod Fluid Near a Right-Angled Wedge and Edge 246
 - 4.5.2 Rod Fluid in Contact with a Periodically Structured Wall 251
- 4.6 Non-Spherical Particles Near Active Walls 256
 - 4.6.1 Zwanzig Rods Near an Active Wall 256
 - 4.6.2 Continuum Theory of Liquid Crystals 260
 - 4.6.2.1 Electric and Magnetic Fields 262
 - 4.6.2.2 Anchoring and Boundary Conditions 263
 - 4.6.3 Nematic Liquid Crystal in Contact with Chemically Patterned Substrates 265
 - 4.6.3.1 Methods of Manufacturing 266
 - 4.6.3.2 The Model and Continuum Theory 268
 - 4.6.3.3 Contact with a Single Chemically Patterned Substrate 270
 - 4.6.3.4 Confinement 271
 - 4.6.3.5 Solvation Force 274
 - 4.6.4 Nematic Liquid Crystal in Contact with Chemically and Geometrically Structured Substrates 278
 - 4.6.4.1 Contact with a Single Chemically and Geometrically Patterned Substrate 279
 - 4.6.4.2 Zenithally Bistable Nematic Device 283

4.6.5	Influence of Voltage on the Phase Behavior of a Zenithally Bistable Liquid-Crystal Device with Grating Surfaces	286
4.6.5.1	Liquid-Crystal Alignment on Sinusoidal Surface Grating Structures	287
4.6.5.2	Phase Behavior of a Zenithally Bistable Liquid-Crystal Device Under Voltage	290
4.6.6	Colloidal Particles Dissolved in a Nematic Solvent	293
4.7	Outlook	295
	<i>References</i>	297
