Table of Contents

1 Definitions and Fundamental Properties 1

INTRODUCTION

GENERAL DEFINITIONS AND EQUIVALENT FORMULATIONS

1.1 The General Problem 6
1.2 Notation 7
1.3 Equivalent Formulations 7
1.4 Terminology 10

FUNDAMENTAL PROPERTIES OF LINEAR PROGRAMS

1.5 The Set of Programs. Extremal Programs 12
1.6 The Fundamental Theorem of Linear Programming 16

GEOMETRIC INTERPRETATION

1.7 Graphical Representations in Activity Space 20
1.8 Geometric Interpretation in Commodity Space 24

LINEAR PROGRAMMING IN ECONOMIC THEORY

1. 9 An Important Economic Interpretation of Linear Programs 25
1.10 Principal Applications of Linear Programming 27

2 The Simplex Method. The Primal Simplex Algorithm, I: General Description 30

FUNDAMENTALS OF THE SIMPLEX METHOD

2. 1 Introduction 30
2. 2 Definitions and Preliminary Notation 32
2. 3 The Basic Solution. The Explicit System 33
2. 4 Fundamental Theorems 35

THE PRIMAL SIMPLEX ALGORITHM

2. 5 Principle of the Algorithm 37
2. 6 The Primal Simplex Algorithm 38
2. 7 Formulas for Changing the Basis 39
2. 8 The Simplex Tableau 40
2. 9 Examples 41
2.10 Determination of All Optimal Programs and Near-Optimal Programs 43

GEOMETRIC AND ECONOMIC INTERPRETATIONS OF THE SIMPLEX METHOD

2.11 Geometric Interpretation of the Simplex Method 44
2.12 Economic Interpretation of the Simplex Method 49

3 The Primal Simplex Algorithm, II: Initial Program, Convergence 50

THE INITIAL BASIC PROGRAM

3.1 General Method of Obtaining an Initial Basic Program: Artificial Variables 50
3.2 Compatibility and Redundancy in the System of Equations 56

3.3 Special Methods 57
3.4 Examples 59

CONVERGENCE OF THE SIMPLEX ALGORITHM

3.5 Introduction: Degeneracy and Cycling 62
3.6 Lexicographic Form of the Simplex Method 63
3.7 A Practical Rule to Avoid Cycling 66
3.8 Example of Cycling 67

4 The Revised Form of the Simplex Method. Comments on Techniques of Calculation 70

THE REVISED FORM

4.1 Introduction 70
4.2 The Adjoined System and Inverse Basis 72
4.3 The Product Form of the Inverse 77
4.4 Example 80

COMMENTS ON TECHNIQUES OF CALCULATION

4.5 Miscellaneous Techniques Currently in Use on Computers and Advantages of the Revised Form 83
4.6 Another Format for Presenting the Simplex Method 88

5 Duality 92

DEFINITION AND FUNDAMENTAL THEOREMS

5.1 General Definition of Dual Problems 92
5.2 Equivalent Forms 94
5.3 The Fundamental Theorem of Duality 96
5.4 Other Fundamental Results 99

PRACTICAL IMPORTANCE, GEOMETRIC AND ECONOMIC INTERPRETATIONS OF DUALITY

5.5 Duality in the Simplex Method 104
5.6 Solution of a Problem by Passing to the Dual 106

5.7 Geometric Interpretation of Duality and the Dual Simplex Algorithm 109
5.8 Economic Interpretation of Duality 111

6 The Dual Simplex Algorithm. The Primal-Dual Method. Synthesis of the Methods 114

6. 1 Introduction 114

THE DUAL SIMPLEX ALGORITHM

6. 2 Preliminaries 116
6. 3 Description of the Method 117
6. 4 The Dual Simplex Algorithm 119
6. 5 The Initial Dual-Feasible Basic Solution 119
6. 6 Example 123
6. 7 Dual Degeneracy. Convergence of the Algorithm 125

THE PRIMAL-DUAL METHOD

6. 8 Preliminaries 128
6. 9 Description of the Method 129
6.10 The Primal-Dual Algorithm 132
6.11 The Initial Dual Program 132

SYNTHESIS OF THE SIMPLEX ALGORITHMS AND CHOICE OF A METHOD

6.12 Factors to be Considered in Choosing a Hand Calculation Method 134
6.13 Other Methods 136
6.14 Current Possibilities for Computer Calculation 136

7 Problems of Post-Optimization. Parametric Programs 138

7. 1 Introduction 138

PROBLEMS OF POST-OPTIMIZATION

7. 2 Modification of the Requirements Vector 140
7. 3 Modification of the Cost Vector 141
7. 4 Addition of a Variable 142
7. 5 Modification of the Coefficients of a Variable 142

7. 6 *Addition of a Constraint* 144
7. 7 *Modification of the Coefficients of a Constraint* 145

PARAMETRIC PROGRAMS

7. 8 *Parametrization of the Requirement Vector* 147
7. 9 *Parametrization of the Economic Function* 152
7.10 *Parametrization of the Matrix of Coefficients A* 156
7.11 *Introduction of Several Linear Parameters* 158

8 Linear Programming in Integers, I: Generalities, All Integer Programs 160

GENERALITIES

8. 1 *Introduction* 160
8. 2 *Format, Hypotheses, Notation. Lexicographically-Dual-Feasible Starting System* 162

THE DISCRETE ALGORITHM

8. 3 *General Principle of the Algorithm* 165
8. 4 *The Additional Equations* 165
8. 5 *Convergence of the Algorithm* 167
8. 6 *Practical Rule for Choosing the Generator Row* 169
8. 7 *Statement of the Discrete Algorithm* 170

THE CYCLIC ALGORITHM

8. 8 *General Principle of the Algorithm* 171
8. 9 *The Additional Equations* 173
8.10 *Convergence of the Algorithm* 174
8.11 *Operating Details* 176
8.12 *Statement of the Cyclic Algorithm* 178
8.13 *Geometric Interpretation of the Additional Constraints* 179

9 Linear Programming in Integers, II: Mixed Integer Programs, Examples, State of the Art 180

THE MIXED ALGORITHM

9.1 *Introduction* 180
9.2 *The Additional Equations* 180
9.3 *Convergence of the Algorithm* 183
9.4 *Statement of the Mixed Algorithm* 183

EXAMPLES AND STATE OF THE ART OF METHODS OF INTEGER PROGRAMMING

9.5 Examples 184
9.6 Present State of Integer Programming 191
9.7 Prospects Opened by Integer Programming 194

10 Bounded Variables. The Decomposition Principle of Dantzig and Wolfe 202

10. 1 Introduction 202

PRELIMINARIES

10. 2 Review of the Simplex Method 204
10. 3 The Sparse Matrix 205
10. 4 Variables Bounded from Below 205

VARIABLES BOUNDED FROM ABOVE

10. 5 General Theorems 206
10. 6 The Modified Primal Simplex Algorithm (General Description) 207
10. 7 The Modified Primal Simplex Algorithm (Critical Value of x_k and New Exit Criterion) 209
10. 8 Variant of the Preceding Method 210
10. 9 Use of the Dual Simplex Algorithm 210

DECOMPOSITION PRINCIPLE OF DANTZIG AND WOLFE

10.10 Introduction 211
10.11 Formulation of the Original Problem and an Equivalent Problem 212
10.12 The Decomposition Algorithm (Description of a Current Iteration) 214
10.13 Allied Problems 216
10.14 Results and Miscellaneous Remarks 219

11 The Transportation Problem: The Simplex Method of Solution 224

DEFINITIONS AND FUNDAMENTAL PROPERTIES

11. 1 Definition 224

11. 2 The Graph G Associated with the Problem 227
11. 3 Matrix of Coefficients of the System 227
11. 4 Algebraic Properties of the Bases 229
11. 5 The Transportation Tableau and the Associated Graph Γ 229
11. 6 Graphical Properties of the Bases 232

THE ADAPTED SIMPLEX METHOD

11. 7 Notation 234
11. 8 Application of the Results of the Simplex Method 235
11. 9 The Transportation Algorithm (Provisional Form) 236
11.10 The Dual Problem. Simplification of the Transportation Algorithm 237
11.11 The Transportation Algorithm 239
11.12 The Initial Basic Program 240
11.13 Degeneracy. Convergence 242
11.14 Example 244

SIMPLE EXTENSIONS

11.15 Introduction 247
11.16 Discussion 248
11.17 Canonical Forms. Adaptation of the Transportation Algorithm 249

12 Transportation Networks, I: Generalities, Maximal Flow 252

12. 1 Introduction 252

DEFINITION AND GENERALITIES

12. 2 General Definition of Transportation Networks 253
12. 3 Notation 254
12. 4 Special Networks 255
12. 5 Tabular Representation of a Transportation Network 256
12. 6 Flow and Circulation 257
12. 7 Disconnecting Sets. Cuts 259
12. 8 Planar Networks 261
12. 9 Path of Minimal Length 262

MAXIMAL (OR MINIMAL) FLOW

12.10 Formulation of the Problem 266
12.11 Case of Planar Networks. First Algorithm of Ford-Fulkerson 267

12.12 Case of Non-Planar Networks (General Case). Second Algorithm and Theorem of Ford-Fulkerson 268
12.13 Initial Flow 270
12.14 Example 270
12.15 Application of the Second Algorithm of Ford-Fulkerson to a Simple Network 270
12.16 Minimal Flow 275

MORE GENERAL PROBLEMS

12.17 Maximal Dynamic Flow 276
12.18 Multi-terminal Flows 277
12.19 Multi-Commodity Flows 278
12.20 Transformed Flows 279

13 Transportation Networks, II: Constrained Flows 280

FEASIBLE DEMAND

13.1 Existence Theorem 280
13.2 Algorithm for Obtaining a Flow Satisfying the Demand. Example 283
13.3 Distribution Problems. Conditions for the Existence of Solutions 284

FEASIBLE CIRCULATION AND FLOW

13.4 Existence Theorem 288
13.5 Algorithm for Obtaining a Feasible Circulation or Flow 290
13.6 Algorithm for Obtaining a Maximal Feasible Flow in a Reduced Network 290
13.7 Another Problem of Feasible Circulation or Flow 291

EXTENSIONS

13.8 Generalities 292
13.9 Flows Bounded from Above and Below at the Nodes 293

14 The Distribution Problem: Primal-Dual Method 296

INTRODUCTION

14.1 Various Linear Generalizations of the Transportation Problem 296

14. 2 Types of Solution Methods. Historical Account 299
14. 3 Statement of the Distribution Problem 300

PRIMAL-DUAL ALGORITHM

14. 4 Basis of the Algorithm 301
14. 5 General Description of the Method 303
14. 6 The General Primal-Dual Algorithm 306
14. 7 Validity and Convergence of the Algorithm 308
14. 8 Organizing the Calculations 309

A SPECIAL CASE

14. 9 Adaptation of the Preceding Results 311
14.10 Special Primal-Dual Algorithm 313
14.11 Organizing the Calculations 314

EXAMPLE

15 The Capacitated Transportation, the Simple Transportation and the Assignment Problem: Primal-Dual Method 324

15. 1 Introduction 324

THE CAPACITATED TRANSPORTATION PROBLEM

15. 2 Statement of the Problem and Notation 325
15. 3 Primal-Dual Algorithm 327
15. 4 Organizing the Calculations. Example 328

THE SIMPLE TRANSPORTATION PROBLEM

15. 5 Statement of the Problem and Notation 334
15. 6 Primal-Dual Algorithm (Provisional Form) 335
15. 7 Organizing the Calculations. Example 336
15. 8 Primal-Dual Algorithm (Definitive Form) 340
15. 9 Remarks on the Second Form of the Algorithm 340

THE ASSIGNMENT PROBLEM

15.10 Statement of the Problem and Notation 341
15.11 Primal-Dual Algorithm 342
15.12 Example 343
15.13 Remarks on the Preceding Algorithm 346

Appendices 349

A. Review of Linear Algebra 349
B. Elementary Notions of Convex Polyhedra 380
C. Definitions Relating to Graphs 402

List of Symbols and Notation 406

English-French Glossary 409

Bibliography 413
