

CONTENTS

1.	Introduction	1
1.1.	Purposes of the Book	4
1.2.	Organization of the Book	6
 Part I – The Inferential and Decision Framework		 9
2.	Some Alternative Sampling Theory and Bayesian Linear Statistical Models, Estimators, and Tests	11
2.1.	Decision Theory and Estimation	11
2.1.1.	The framework	11
2.1.2.	Choosing a decision rule	12
2.1.3.	The squared error loss measure	15
2.1.4.	The risk matrix measure	16
2.2.	The Basic Linear Statistical Model and Some Traditional Estimators	17
2.2.1.	The model	17
2.2.2.	A best linear unbiased estimator	18
2.2.3.	The prediction function problem	21
2.2.4.	The reparameterized statistical model	22
2.2.5.	Generalized least squares model and estimator	24
2.2.6.	A multivariate specification	25
2.3.	The General Linear Hypothesis Statistical Model and Estimator	26
2.3.1.	The statistical model	26
2.3.2.	The estimator	27
2.3.3.	The risk matrix criterion	29
2.3.4.	A weighted mean squared error risk	30
2.3.5.	The conditional mean forecasting risk	33
2.4.	Implications for Model Misspecification	34
2.5.	The Stochastic Linear Hypothesis Statistical Model	37
2.5.1.	The model	37
2.5.2.	The estimator	37
2.5.3.	Estimator comparison – Covariance and risk matrix	38
2.5.4.	Reformulated statistical model	39

2.5.5.	A comparison of risk functions for the conventional and stochastic restricted estimators	41
2.5.6.	A comparison of weighted risk functions for conventional and stochastic restricted estimators	42
2.6.	Bayesian Estimation for the Linear Model	43
2.6.1.	Non-informative prior	46
2.6.2.	An alternative prior distribution	47
2.7.	Hypothesis Testing	49
2.7.1.	General linear hypothesis testing	50
2.7.2.	Stochastic linear hypothesis	55
2.7.3.	Bayesian hypothesis testing	58
2.8.	Concluding Remarks	59
Part II – Preliminary Test Estimators		61
3.	The Preliminary Test Estimator for the Orthonormal Statistical Model	63
3.1.	Introduction	63
3.2.	The Statistical Models, Estimators, and Tests	63
3.2.1.	Orthonormal model and estimators	66
3.2.2.	Risk function comparisons	67
3.2.3.	Test mechanism	68
3.2.4.	The pre-test estimator	69
3.3.	Analysis of the Risk Function for the Pre-test Estimator	69
3.3.1.	The risk function	72
3.3.2.	Comparison of the risk functions	75
3.3.3.	Optimal critical values for testing	79
3.4.	Mean and Covariance	81
3.5.	Concluding Remarks	81
4.	The Preliminary Test Estimator (General Case)	83
4.1.	Introduction	83
4.2.	Models, Estimators and Tests	85
4.3.	The Risk Function of the Preliminary Test Estimator	87
4.3.1.	A restatement of the test statistic	89
4.3.2.	A reformulation of the risk function	89
4.3.3.	Characteristics of the risk function	92
4.3.4.	An alternative development of the pre-test loss function	93
4.4.	Comparison of the Risk Functions	95
4.4.1.	Conventional and preliminary test estimators	95
4.4.2.	Preliminary test and restricted estimators	98
4.5.	Optimal Choice of α	100
4.6.	The Bias and Covariance Matrix	101
4.7.	Conditional Mean Forecast Problem	102
4.8.	Summary Remarks	103

5.	The Performance of the Pre-test Estimator under a Risk Matrix Criterion	105
5.1.	Introduction	105
5.2.	The Statistical Models and Estimators	106
5.3.	The Risk Matrix of the Preliminary Test Estimator	106
5.3.1.	A reformulation of the test statistic	107
5.3.2.	A restatement of the pre-test risk matrix	108
5.3.3.	The risk matrix in terms of $\hat{\theta}$	111
5.3.4.	Comparison of the risk matrices	112
5.4.	The Mean and Covariance Matrix of the Pre-test Estimator	115
5.5.	Some Alternative Risk Matrix Comparisons	117
5.6.	The Forecast Risk Matrix	118
5.7.	A Concluding Remark	119
6.	The Stochastic Hypothesis Preliminary Test Estimator	121
6.1.	Introduction	121
6.2.	Statistical Models, Estimators and Tests	121
6.3.	A Stochastic Hypothesis Preliminary Test Estimator	124
6.4.	A Comparison of the Risk Matrices of the Conventional and Stochastic Hypothesis Preliminary Test Estimators	125
6.4.1.	The risk matrix	126
6.4.2.	Conditions for the Δ matrix to be positive semi-definite	128
6.5.	A Comparison of the Risk Functions of the Conventional and Preliminary Test Estimators	129
6.6.	Mean and Covariance of the Preliminary Test Estimator	131
6.7.	Some Stochastic Hypotheses Test Generalizations and an Application	132
6.7.1.	Prior information via introspection	133
6.7.2.	Prior information from a previous sample	134
6.7.3.	Zellner's seemingly unrelated estimates and an introspective prior	136
6.7.4.	An application	139
7.	Autocorrelation Pre-test Estimators	143
7.1.	The Statistical Model	144
7.2.	Alternative Estimators under Autocorrelation	145
7.2.1.	Generalized least squares	146
7.2.2.	Cochrane–Orcutt two-stage procedure	146
7.2.3.	The Durbin estimator	147
7.2.4.	The Prais–Winsten estimator	147
7.3.	Tests for Serial Correlation	148
7.3.1.	Durbin and Watson	148
7.3.2.	The Berenblutt and Webb g -statistic	149
7.3.3.	Other test statistics	151
7.4.	A Two-stage Estimator	151

7.5.	The Experimental Design	152
7.6.	Empirical Results	153
7.6.1.	The Durbin-Watson pre-test risks	154
7.6.2.	The Berenblutt and Webb pre-test risk	156
7.7.	Conclusions	160
7.8.	Tables of Empirical Risk Function Values	161
Part III – The Stein-rule Family of Estimators		165
8.	Introduction to the Stein-rule Estimators	167
8.1.	Introduction	167
8.2.	The Statistical Model and Maximum Likelihood Estimator	167
8.3.	A Stein-rule Estimator	170
8.3.1.	The James and Stein estimator	170
8.3.2.	Mean and covariance matrix	172
8.3.3.	An interpretation of the James and Stein estimator	173
8.4.	Some Variations of the Stein-rule	176
8.4.1.	A reformulation	176
8.4.2.	The case of unknown σ^2	176
8.4.3.	The Baranchik result	181
8.5.	The James and Stein Positive-rule Estimator	182
8.5.1.	Generalized positive-rule estimators	185
8.6.	The Strawderman Result	187
8.7.	Sclove's Modified Positive-rule Estimator	189
8.7.1.	Risk comparisons	192
8.8.	Combining Normal Means and Regression Equations	195
8.8.1.	The Zellner model	195
8.8.2.	Combining three or more independent normal mean estimation problems with unknown variances	197
8.8.3.	Combining regression equations with unknown variances	198
8.9.	Appendix to Chapter 8	200
8.9.1.	The covariance matrix of the James and Stein estimator, σ^2 known	200
8.9.2.	The covariance matrix of the James and Stein estimator, σ^2 unknown	201
8.9.3.	The covariance matrix for the positive-rule estimator, σ^2 unknown	203
8.9.4.	The covariance matrix of the Sclove modified Stein-rule estimator	204
9.	Some Monte Carlo Sampling Results – Identity Covariance	207
9.1.	Empirical Risk Functions for the Sclove Modified Stein-rule Estimator	207
9.1.1.	The sampling experiment	208
9.1.2.	The sampling results	209

9.1.3. Concluding remarks	213
9.2. Family of Positive-rule Estimators, σ^2 Known	214
9.3. A Monte Carlo Experiment for a Family of Stein-rule Estimators, σ^2 Unknown	221
9.4. Sampling Distribution of the Stein-rules	223
10. Stein-rule Estimators under Weighted Squared Error Loss	229
10.1. The Statistical Model and Loss Function	229
10.2. General Minimax and Positive-rule Estimators	230
10.2.1. General minimax estimator	231
10.2.2. General positive-rule estimators	238
10.3. Some Alternatives from the Family of Stein-rule Estimators	240
10.3.1. A James and Stein type minimax estimator	240
10.3.2. An alternative estimator	248
10.3.3. Berger's minimax estimator	250
10.4. Admissible Minimax Estimators	253
10.4.1. The Bock–Strawderman estimator	253
10.4.2. The Berger–Strawderman estimator	254
10.5. Combining Parameter Vectors	255
11. Some Monte Carlo Sampling Results – Non-identity Covariance	259
11.1. The Experimental Design	259
11.2. James and Stein Form of the Minimax Estimator	261
11.3. Berger–Strawderman and Stein-rule Sampling Results	265
11.4. Diagonal Covariance Matrix with Unknown Variances	268
11.5. Weighted Risk Function with Unknown Covariance Matrix	270
11.6. Stein-rules with All Elements of the Covariance Matrix Unknown	271
11.7. Concluding Remarks	274
12. The Stochastic Regressor Statistical Model	275
12.1. Introduction	275
12.2. The Statistical Model	275
12.3. The Measure of Goodness	277
12.4. The Baranchik–Stein Prediction Function	277
12.5. An Alternative Prediction Function	281
12.6. Some Final Remarks	287
13. Some Applications of the Estimators to Economic Data	293
13.1. Introduction	293
13.2. Price–cost Margins and Industry Structure	294
13.3. The Phillips Curve	300
13.4. Evaluation and Concluding Remarks	307

14. Some Final Remarks	309
Appendix A. Some Distribution and Matrix Theorems	313
A.1. Normal Distributions	313
A.2. Chi-square Distributions	313
A.3. Matrix Algebra Relevant to Normal Theory	315
Appendix B. Theorems and Lemmas Used in the Risk Evaluations	319
B.1. Some Supporting Lemmas	319
B.2. Some Basic Theorems	321
B.3. Properties of Functions of the Non-central F Distribution	327
