

1.	PROBLEM-SOLVING PROCESSES	1
	Problems	2
	A Model for Problem-solving Processes (rational, intuitive, or autistic thought)	3
	Set 1	7
	A Closer Look at Rational Processes (memory and recall, algorithmic, or analytic and synthetic thought)	9
	Set 2	12
	Useful Analytic and Synthetic Processes (nine standard rational approaches to solving problems)	14
	Set 3	21
2.	THE THIRD R	26
	Numeration (several ancient whole number numeration systems and the Hindu Arabic system)	26
	Set 1	31
	Foundations (concrete and semiconcrete interpretations of whole number addition, subtraction, multiplication, and division)	33
	Set 2	39
	Building Brick Walls (algorithms for whole number addition, subtraction, multiplication, and division)	41
	Set 3	48
	Fractions—An Endangered Species? (basic concepts for fractions: symbolism and interpretations, renaming, comparison, and common denominators)	50
	Set 4	56
	Number Crunching, with Fractions? (addition, subtraction, multiplication and division algorithms; accompanying properties)	60
	Set 5	65

Guess That It Was Bound to Happen (the relationship of the decimal system to fractions)	67
Set 6	73
The Two Faces of Percent (relating percent to fractions and decimals; computing)	75
Set 7	79
Negative Numbers (a basic model for computing with positive and negative numbers)	83
Set 8	88
Holes in the Road (irrational numbers)	90
Set 9	94
Another Look at Whole Numbers (primes and composites; odd and even)	96
Set 10	100
3. GEOMETRY	103
Shapes (lines, segments, rays, circles, spheres, and angles; straightedge and compass)	104
Set 1	107
Shape Transformations (slides, flips, and turns)	108
Set 2	114
Look-alikes (symmetry and congruence)	117
Set 3	122
Curves (simple closed curves and polygons)	124
Set 4	128
When Two Lines Meet (opposite angles, perpendicularity, parallelism, and traditional constructions)	130
Set 5	136
Tessellating the Plane (regular and irregular polygons)	138
Set 6	142
Tessellations in Art, You, and Escher (exploring tessellations that are not made from polygons as a basic shape)	144
Set 7	148
Polyhedra (vertices, edges, and faces)	151
Set 8	153
4. ANSWERS	156
Forms for Answers (numbers, figures, logical arguments, conclusions, and processes)	157
Set 1	161

Reasonable Numerical Answers (estimating and rounding off)	162
Set 2	166
Communicating Answers (precision, the size of numbers, and appropriate units)	168
Set 3	171
Practicing (practicing giving reasonable answers that communicate to others using mass and temperature in the metric system)	172
Set 4	174
5. CHANCE	177
Chance (a beginning definition of the probability of an event, and its complement)	177
Set 1	181
Counting the Possibilities (the fundamental counting principal)	184
Set 2	187
The Chain Law Is in Effect (applying the chain law to unrelated events, and the modified chain law to related events)	189
Set 3	193
Through the Back Door (finding the probability of an event by using the complementary event)	195
Set 4	198
The Way Things Are (determining probabilities through empirical evidence)	199
Set 5	203
6. THERE MUST BE A BETTER WAY!	206
Calculator versus Computer (a working distinction between the two tools)	207
Set 1 (problems for a calculator)	208
Flowcharts (charting solutions to real-life dilemmas, some of which require “decisions” and “looping”)	209
Set 2	214
Flowcharts that Count (counting the number of times through a loop in a flowchart and checking the logic of a flowchart with a loop by reducing the problem to one that can be traced by hand)	217
Set 3	221
Introduction to Programming (simple programs that involve no looping; coding into BASIC)	223
Set 4	227
Using a Loop (writing programs that involve looping)	230
Set 5	234

The Right Tool (choosing to use a calculator, computer, or paper and pencil to solve a problem)	237
Set 6	238
7. MEASUREMENT	241
Measuring Length (using meter as the base unit)	243
Set 1	245
Measuring Area (using tessellating figures—squares—with sides being subdivisions of a meter, to measure area)	247
Set 2	251
Measuring Volume (using cubes with metric dimensions to “fill up” space)	254
Set 3	257
Measuring Angles (degrees and radians)	258
Set 4	261
Measures Common to All Classrooms (some of the more common, nonphysical attributes frequently measured in the classroom)	262
Set 5	267
8. DESCRIPTIVE STATISTICS	270
Grouping and Classifying (preset vs. clustering technique)	271
Set 1	276
Presenting Data Visually (pictograms, bar graphs, line graphs, and circle graphs)	279
Set 2	285
Population Studies (random and representative samples; stratified random sampling)	288
Set 3	290
Group Measures (mean, median, and mode as descriptors of central tendency; range and standard deviation as measures of dispersion)	291
Set 4	296
The Normal Curve (how standard deviation determines the shape of the normal curve)	298
Set 5	304
9. PROBLEM SOLVING, E X T E N D E D	307
Other Solutions (finding other paths to a problem that has been solved)	307
Set 1	310

Tip of the Iceberg (extending a solved problem; generating new problem situations)	311
Set 2	314
Explorations (problem-solving experiences that come initially from informal “messaging around”)	315
Set 3	320
Unique Interpretations and Perspectives (exploring different interpretations of given problem situations)	322
Set 4	326
Problems for the Road (a collection of problems for the curious student who wants more)	328
Set 5	328
COMMENTARY	335
GLOSSARY	367
INDEX	375
