<i>List of Tables</i>	vi
<i>List of Figures</i>	viii
<i>List of Appendixes</i>	x
<i>Preface</i>	xi
<b>Chapter 1 Background to the study</b>	1
The work of the CSMS (mathematics) project	1
Investigating the CSMS algebra errors: rationale	2
Suggested reasons for the errors observed in CSMS algebra	4
The interpretation of letters	4
The methods used by children	5
Summary: points for investigation	6
Framework for the SESM research	6
Theoretical perspective	6
Research methodology	7
Form of the report: SESM algebra	7
<b>Chapter 2 SESM interviews (Phase One)</b>	8
Description of the interview sample	8
Selection of schools	8
Selection of the sample for testing	8
The CSMS algebra screening test: administration and results	9
Selection of children for interview	10
The Phase One interviews	11
Design of interview schedule	11
The interviews	12
Analysis of interviews	12
Findings	12
Meaning attached to letters	12
Operating with letters	15
Notation and convention	18
Conclusions from interviews: elaboration of initial hypotheses	22
<b>Chapter 3 SESM interviews (Phase Two)</b>	24
Description of the interview sample	24
The Phase Two interviews	24
Design of interview items	24
Interviews and analysis	27
Findings	27
Comparison across interviews	27
Meaning attached to letters	28
Notation and convention	29
Operating with letters	32
Child methods	37
Conclusions from interviews: the basis for development of the teaching module	38

<b>Chapter 4 Teaching experiments</b>	39
The teaching sequence	40
General principles	40
Outline of the programme	41
The teaching experiments	43
Sample	43
Design	44
Pre-test	44
The instructional phase	44
The immediate post-test	44
The delayed post-test	44
Results of the teaching experiments: general observations	44
Results of the testing	45
Changes in total score	45
Conjoining	49
Use of brackets	49
Formalization and symbolization of method	49
Meaning attached to letters	49
Gains in delayed post-test performance	53
Further investigation: the use of brackets	53
Amendments to the teaching programme	56
<b>Chapter 5 Class trials</b>	57
Class teaching (researcher)	57
Sample	57
Procedure	58
Observations	59
Use of brackets	59
Representation of method	59
Integral versus non-integral values	60
The interpretation of letters	60
Test results	60
Overall performance	60
Performance by item: first- and second-year groups	64
Performance by item: third- and fourth-year groups	67
Summary	70
Modification of the teaching module	70
Class teaching (other teachers)	71
Sample	71
Teacher briefing	71
Procedure	71
Results	72
School A	72
School B	77
Schools C, D, E	83
Summary	84

<b>Chapter 6 Summary and implications</b>	85
Summary of findings	85
Discussion	87
General observations	87
The interpretation of letters	87
The formalization of method	88
Notation and convention	90
Summary	91
Implications of the research	92
The teaching of algebra	92
The meaning of letters	92
The formalization of method	93
Notation and convention	94
Further research	94
The use of informal methods in mathematics	94
The nature of children's cognition and its relevance to mathematical learning	95
Misconceptions in algebra	95
<i>Appendixes</i>	97
<i>References</i>	136
<i>Index</i>	141
