Contents

1 Introduction 1

2 Set theory 7

I. **A survey problem** 9

II. **The tools of set theory** 10

The language of sets 10

Relations and operations with sets 15

Mastery test: Tools of set theory 27

III. **The survey problem: A model and a solution** 28

3 Graph theory 33

I. **Scheduling the construction of a space colony** 35

II. **The tools of graph theory** 36

Graphs, puzzles, and map coloring 36

Directed graphs 53

Matrix models for directed graphs 63
Mastery test: Tools of graph theory 74
III. **PERT: A model used in scheduling the construction of the space colony** 77

4 **Legislative Apportionment and Inequalities** 89

I. **The Alabama paradox** 91
II. **Apportionment and the tools of inequalities** 94
Measures of the unfairness of an apportionment 94
Inequalities 98
An apportionment principle 103
Mastery test: Apportionment and tools of inequalities 108
III. **Apportioning the Collegeville University faculty council** 109

5 **Linear equations in the plane** 117

I. **A fish management problem: What went wrong at Bass Lake?** 119
II. **Tools of linear equations** 121
Linear relations 121
Graph of a linear relation 126
Solving a system of linear equations 139
Mastery test: Tools of linear equations 144
III. **A model for the fish-management problem** 146

6 **Linear programming** 157

I. **An urban-redevelopment problem** 159
II. **Tools of linear programming** 163
Linear inequalities in the plane 163
The linear programming problem 170
Mastery test: Tools of linear programming 182
III. **A solution for the urban-redevelopment problem** 183

7 Counting 193

I. What is the number of shortest routes 195
II. The tools of counting 197
Counting principles and permutations 197
Combinations 207
Mastery test: Tools of counting 211
III. A model for counting the shortest routes 213

8 Probability 217

I. Should the claim be accepted? 219
II. Tools of probability 219
Probabilistic models 219
Expected value 231
Multistage experiments 239
Binomial experiment 248
Mastery test: Tools of probability 254
III. The decision-making problem: A model and a solution 256

9 Descriptive statistics 261

I. Should the grades be curved? 263
II. Tools of descriptive statistics 265
Distributions and measures of central tendency 265
Measures of dispersion 277
Chebyshev's inequality 286
Mastery test: Tools of descriptive statistics 289
III. You were wrong 291

10 The computer: a tool of man 297

Computers and algorithms 302
Writing flowcharts 326

Appendix

Table A. Binomial Probability 345
Table B. Square Root 351

Answers to selected exercises 357
