## Part I Dynamic Modeling through Subspace Identification

---

<b>2 System Identification: Conventional Approach</b> .....	9
2.1 Introduction.....	9
2.2 Discrete-time Systems.....	9
2.2.1 Finite Difference Models.....	10
2.2.2 Exact Discretization for Linear Systems.....	10
2.2.3 Backshift Operator and Discrete-time Transfer Functions.....	11
2.3 An Example of System Identification: ARX Modeling.....	12
2.4 Persistent Excitation in Input Signal.....	13
2.5 Model Structures.....	15
2.5.1 Prediction Error Model (PEM).....	15
2.5.2 AutoRegressive with Exogenous Input Model (ARX)....	15
2.5.3 AutoRegressive Moving Average with Exogenous Input Model (ARMAX).....	16
2.5.4 Box-Jenkins Model (BJ).....	17
2.5.5 Output Error Model (OE).....	17
2.5.6 MISO (Multi-input and Single-output) Prediction Error Model.....	18
2.5.7 State Space Model.....	18
2.6 Prediction Error Method.....	19
2.6.1 Motivation.....	19
2.6.2 Optimal Prediction.....	21
2.6.3 Prediction Error Method.....	24

2.7	Closed-loop Identification . . . . .	25
2.7.1	Identifiability without External Excitations . . . . .	26
2.7.2	Direct Closed-loop Identification . . . . .	27
2.7.3	Indirect Closed-loop Identification . . . . .	28
2.7.4	Joint Input-output Closed-loop Identification . . . . .	29
2.8	Summary . . . . .	29
<b>3</b>	<b>Open-loop Subspace Identification . . . . .</b>	<b>31</b>
3.1	Introduction . . . . .	31
3.2	Subspace Matrices Description . . . . .	31
3.2.1	State Space Models . . . . .	31
3.2.2	Notations and Subspace Equations . . . . .	33
3.3	Open-loop Subspace Identification Methods . . . . .	40
3.4	Regression Analysis Approach . . . . .	40
3.5	Projection Approach and N4SID . . . . .	43
3.5.1	Projections . . . . .	43
3.5.2	Non-steady-state Kalman Filters . . . . .	44
3.5.3	Projection Approach for Subspace Identification . . . . .	46
3.6	QR Factorization and MOESP . . . . .	48
3.7	Statistical Approach and CVA . . . . .	49
3.7.1	CVA Approach . . . . .	49
3.7.2	Determination of System Order . . . . .	51
3.8	Instrument-variable Methods and EIV Subspace Identification . .	51
3.9	Summary . . . . .	53
<b>4</b>	<b>Closed-loop Subspace Identification . . . . .</b>	<b>55</b>
4.1	Introduction . . . . .	55
4.2	Review of Closed-loop Subspace Identification Methods . . . . .	57
4.2.1	N4SID Approach . . . . .	57
4.2.2	Joint Input-Output Approach . . . . .	59
4.2.3	ARX Prediction Approach . . . . .	60
4.2.4	An Innovation Estimation Approach . . . . .	61
4.3	An Orthogonal Projection Approach . . . . .	63
4.3.1	A Solution through Orthogonal Projection . . . . .	63
4.3.2	The Problem of Biased Estimation and the Solution . . . . .	67
4.3.3	Model Extraction through Kalman Filter State Sequence . . . . .	69
4.3.4	Extension to Error-in-variable (EIV) Systems . . . . .	71
4.3.5	Simulation . . . . .	72
4.4	Summary . . . . .	78
<b>5</b>	<b>Identification of Dynamic Matrix and Noise Model Using Closed-loop Data . . . . .</b>	<b>79</b>
5.1	Introduction . . . . .	79
5.2	Estimation of Process Dynamic Matrix and Noise Model . . . . .	81
5.2.1	Estimation of Dynamic Matrix of the Process . . . . .	84
5.2.2	Estimation of the Noise Model . . . . .	85

5.3	Some Guidelines for the Practical Implementation of the Algorithm .....	86
5.4	Extension to the Case of Measured Disturbance Variables .....	87
5.5	Closed-loop Simulations .....	89
	5.5.1 Univariate System .....	89
	5.5.2 Multivariate System .....	90
5.6	Identification of the Dynamic Matrix: Pilot-scale Experimental Evaluation .....	94
5.7	Summary .....	96

**Part II Predictive Control**

<b>6</b>	<b>Model Predictive Control: Conventional Approach .....</b>	<b>101</b>
6.1	Introduction .....	101
6.2	Understanding MPC .....	102
6.3	Fundamentals of MPC .....	103
	6.3.1 Process and Disturbance Models .....	103
	6.3.2 Predictions .....	105
	6.3.3 Free and Forced Response .....	106
	6.3.4 Objective Function .....	107
	6.3.5 Constraints .....	107
	6.3.6 Control Law .....	108
6.4	Dynamic Matrix Control (DMC) .....	108
	6.4.1 The Prediction Model .....	109
	6.4.2 Unconstrained DMC Design .....	111
	6.4.3 Penalizing the Control Action .....	111
	6.4.4 Handling Disturbances in DMC .....	112
	6.4.5 Multivariate Dynamic Matrix Control .....	113
	6.4.6 Hard Constrained DMC .....	115
	6.4.7 Economic Optimization .....	116
6.5	Generalized Predictive Control (GPC) .....	117
6.6	Summary .....	118
<b>7</b>	<b>Data-driven Subspace Approach to Predictive Control .....</b>	<b>121</b>
7.1	Introduction .....	121
7.2	Predictive Controller Design from Subspace Matrices .....	122
	7.2.1 Inclusion of Integral Action .....	125
	7.2.2 Inclusion of Feedforward Control .....	127
	7.2.3 Constraint Handling .....	128
7.3	Tuning the Noise Model .....	130
7.4	Simulations .....	132
7.5	Experiment on a Pilot-scale Process .....	138
7.6	Summary .....	141

---

**Part III Control Performance Monitoring**

---

<b>8</b>	<b>Control Loop Performance Assessment: Conventional Approach</b> .....	145
8.1	Introduction .....	145
8.2	SISO Feedback Control Performance Assessment .....	146
8.3	MIMO Feedback Control Performance Assessment .....	150
8.4	Summary .....	155
<b>9</b>	<b>State-of-the-art MPC Performance Monitoring</b> .....	157
9.1	Introduction .....	157
9.2	MPC Performance Monitoring: Model-based Approach .....	158
9.2.1	Minimum-variance Control Benchmark .....	158
9.2.2	LQG/MPC Benchmark .....	159
9.2.3	Model-based Simulation Approach .....	160
9.2.4	Designed/Historical vs Achieved .....	161
9.2.5	Historical Covariance Benchmark .....	161
9.2.6	MPC Performance Monitoring through Model Validation .....	162
9.3	MPC Performance Monitoring: Model-free Approach .....	165
9.3.1	Impulse-Response Curvature .....	165
9.3.2	Prediction-error Approach .....	166
9.3.3	Markov Chain Approach .....	166
9.4	MPC Economic Performance Assessment and Tuning .....	167
9.5	Probabilistic Inference for Diagnosis of MPC Performance .....	171
9.5.1	Bayesian Network for Diagnosis .....	171
9.5.2	Decision Making in Performance Diagnosis .....	173
9.6	Summary .....	175
<b>10</b>	<b>Subspace Approach to MIMO Feedback Control Performance Assessment</b> .....	177
10.1	Introduction .....	177
10.2	Subspace Matrices and Their Estimation .....	179
10.2.1	Revisit of Important Subspace Matrices .....	179
10.2.2	Estimation of Subspace Matrices from Open-loop Data ..	180
10.3	Estimation of MVC-benchmark from Input/Output Data .....	181
10.3.1	Closed-loop Subspace Expression of Process Response under Feedback Control .....	181
10.3.2	Estimation of MVC-benchmark Directly from Input/Output Data .....	183
10.4	Simulations and Application Example .....	190
10.5	Summary .....	193

<b>11 Prediction Error Approach to Feedback Control</b>	
<b>Performance Assessment</b> .....	195
11.1 Introduction .....	195
11.2 Prediction Error Approach to Feedback Control Performance Assessment .....	196
11.3 Subspace Algorithm for Multi-step Optimal Prediction Errors ..	201
11.3.1 Preliminary .....	201
11.3.2 Calculation of Multi-step Optimal Prediction Errors ....	202
11.3.3 Case Study .....	206
11.4 Summary .....	211
<b>12 Performance Assessment with LQG-benchmark from Closed-loop Data</b> .....	213
12.1 Introduction .....	213
12.2 Obtaining LQG-benchmark from Feedback Closed-loop Data ...	214
12.3 Obtaining LQG-benchmark with Measured Disturbances .....	217
12.4 Controller Performance Analysis .....	219
12.4.1 Case 1: Feedback Controller Acting on the Process with Unmeasured Disturbances .....	219
12.4.2 Case 2: Feedforward Plus Feedback Controller Acting on the Process .....	220
12.4.3 Case 3: Feedback Controller Acting on the Process with Measured Disturbances .....	221
12.5 Summary of the Subspace Approach to the Calculation of LQG-benchmark .....	222
12.6 Simulations .....	223
12.7 Application on a Pilot-scale Process .....	224
12.8 Summary .....	227
<b>References</b> .....	229
<b>Index</b> .....	237
