Preface xix

Prologue xxi

Guido Gainotti

PART

I

METHODS AND TECHNIQUES

**1. Classical and Contemporary
Assessment of Aphasia and Acquired
Disorders of Language**

Yves Turgeon and Joël Macoir

- 1.1. Introduction 3
 - 1.2. Nature of Language Deficits 4
 - 1.2.1. Classification of Aphasic Syndromes and Symptoms 4
 - 1.2.2. Pure Language Impairments 4
 - 1.3. Theoretical Models for the Assessment of Language Impairment 5
 - 1.3.1. The Clinical–Neuroanatomical Approach to Language Assessment 5
 - 1.3.2. Psycholinguistic Approach to Language Assessment 5
 - 1.4. Classical Tests and Aphasia Assessment Procedures 6
 - 1.4.1. Bedside and Screening Tests 6
 - 1.4.2. Comprehensive Examinations and Aphasia Batteries 7
 - 1.4.3. Assessment of Specific Aspects of Language 7
 - 1.4.4. Assessment of Functional Communication 8
 - 1.5. Classical Tests for the Assessment of Language Impairment in Special Populations 8
-

Contents

- 1.5.1. Assessment of Language in Dementia 8
- 1.5.2. Assessment of Language in TBI and RHD 9
- 1.6. Interface between Language and Other Cognitive Functions 9
 - 1.6.1. Working Memory, Executive Functions, and Language 9
 - 1.6.2. Object Recognition, Semantic Processing, and Language 10
- 1.7. Challenges and Future Directions 10

2. The Hypothesis Testing Approach to the Assessment of Language

Lyndsey Nickels

- 2.1. Introduction 13
- 2.2. What is the Hypothesis Testing Approach to Assessment? 13
 - 2.2.1. How Do We Form Hypotheses? 15
 - 2.2.2. How Do We Test Hypotheses? 16
- 2.3. Hypothesis Testing of Language Impairment: Assessment Resources and Considerations 16
 - 2.3.1. Interpreting Success and Failure on a Task 17
 - 2.3.2. Converging Evidence 17
 - 2.3.3. Assessment Materials 18
- 2.4. Summary and Conclusions 20
- 2.5. Challenges and Future Directions 20
- Appendix – Hypothesis Testing: A Worked Example 21

3. The Intracarotid Amobarbital Test (Wada Test) and Complementary Procedures to Evaluate Language Before Epilepsy Surgery

Alexander I. Tröster and Kirsten R. Mohn

- 3.1. Introduction 23
- 3.2. Historical Background 23

- 3.3. Current Clinical Use of the IAT 24
- 3.4. Rationale Underlying the IAT Procedure 24
- 3.5. Components of the IAT Procedure 25
- 3.6. Problems and Considerations in IAT Protocol Administration and Interpretation 26
 - 3.6.1. Unilateral versus Bilateral IAT 26
 - 3.6.2. Drugs and Administration Methods 27
 - 3.6.3. Determination of Adequacy of Anesthesia and Timing of Stimulus Presentation 27
 - 3.6.4. Criteria to Establish Hemispheric Language Dominance 27
- 3.7. IAT in Pediatric Populations 28
- 3.8. Validation and Reliability Studies 28
- 3.9. Supplementary and Alternative Techniques for Establishing Language Lateralization 29
- 3.10. Challenges and Future Directions 31

4. Architectonic Language Research

Katrin Amunts

- 4.1. Introduction 33
- 4.2. Broca's Region 35
 - 4.2.1. Cytoarchitecture of BA 44 and 45 36
 - 4.2.2. Localization of BA 44 and 45 and Their Intersubject Variability 36
 - 4.2.3. Receptorarchitecture 38
- 4.3. Wernicke's Region 39
- 4.4. Other Regions Involved in Language 40
- 4.5. Interhemispheric Cytoarchitectonic Differences 40
- 4.6. Cytoarchitectonic Maps for the Analysis of Language 41
- 4.7. Challenges and Future Directions 42

5. Microgenesis of Language: Vertical Integration of Linguistic Mechanisms Across the Neuraxis

Don M. Tucker, Gwen Frishkoff and Phan Luu

- 5.1. Introduction 45
 - 5.1.1. Basic Principles and Plan for Chapter 45
- 5.2. Principles of Brain Structure and Function 46
 - 5.2.1. Levels of Brain, Levels of Representation 46
 - 5.2.2. Language Across Corticolimbic Levels 47
 - 5.2.3. Archicortical and Paleocortical Bases of Microgenesis 48
- 5.3. From Anatomical Structure to Neurolinguistic Function 49
 - 5.3.1. Anatomy and Functions of the Medial Temporal Lobe 49

- 5.4. Time Dynamics of Fronto–Temporal Activations 51
 - 5.4.1. Interactionist versus Serial Views of Perception 51
 - 5.4.2. Frontal and Temporal Activity in Semantic Processing 52
- 5.5. Vertical Integration: Coordination of Internal and External Contexts for Meaning 53
 - 5.5.1. Hemispheric Contributions to Mood and Meaning 53
 - 5.5.2. Medial Frontal Networks in Semantic Memory 53
- 5.6. Challenges and Future Directions: Levels of Brain, Levels of Language? 53

6. A Brief Introduction to Common Neuroimaging Techniques

Frank A. Rodden and Brigitte Stemmer

- 6.1. Introduction 57
- 6.2. Electromagnetic Functional Neuroimaging Techniques 58
 - 6.2.1. The Event-Related Potential Technique 59
 - 6.2.2. Magnetoencephalography 60
 - 6.2.3. Benefits and Limitations 60
- 6.3. Hemodynamic Functional Neuroimaging Techniques 60
 - 6.3.1. Functional Magnetic Resonance Imaging 62
 - 6.3.2. Diffusion Magnetic Resonance Imaging: Diffusion Tensor Imaging and Diffusion-Weighted Imaging 62
 - 6.3.3. Positron Emission Tomography 63
 - 6.3.4. Benefits and Limitations 64
- 6.4. Repetitive Transcranial Magnetic Stimulation 64
- 6.5. Near-Infrared Spectroscopy 65
- 6.6. Challenges and Future Directions 66

PART

II

NEUROIMAGING OF LANGUAGE

7. PET Research of Language

Barry Horwitz and Richard J.S. Wise

- 7.1. Introduction 71
- 7.2. PET versus fMRI – Some Methodological Issues 72
- 7.3. Crucial PET Findings 73
 - 7.3.1. Language Comprehension 73
 - 7.3.2. Language Production 76
- 7.4. Challenges and Future Directions 78

8. Functional Magnetic Resonance Imaging (fMRI) Research of Language

Uri Hasson and Steven L. Small

- 8.1. Introduction 81
- 8.2. Recognizing Auditory Input as Speech 82
- 8.3. Word Representation: Form and Meaning 83
- 8.4. From Words to Sentences: Syntactic Processing 84
- 8.5. From Words to Sentences: Semantic Processing of Sentences 85
- 8.6. From Sentences to Discourse 86
- 8.7. Challenges and Future Directions 87

9. Event-Related Potentials in the Study of Language

Karsten Steinhauer and John F. Connolly

- 9.1. Introduction 91
- 9.2. Language-Related Components and Their Functional Significance 92
 - 9.2.1. The N100: An Exogenous Component with Linguistic Functions? 92
 - 9.2.2. Prelexical Expectations: The Phonological Mapping Negativity 92
 - 9.2.3. Lexico-Semantic Integration: The N400 Component 95
 - 9.2.4. Left Anterior Negativities (LANs) and P600s in Morpho-Syntactic Processing 95
 - 9.2.5. Early and Other Left Anterior Negativities 97
 - 9.2.6. P600/Syntactic Positive Shift 99
 - 9.2.7. Verb Argument Structure Violations and Thematic Roles 99
 - 9.2.8. Interactions Between Syntax, Semantics, Discourse, and Prosody 100
 - 9.2.9. Prosodic Phrasing: The Closure Positive Shift 102
- 9.3. Challenges and Future Directions 103

10. Direct Electrical Stimulation of Language Cortex

Barry Gordon and Kerry Ledoux

- 10.1. Introduction 105
- 10.2. Description of the Technique 105
- 10.3. Comparison to Other Techniques 107
- 10.4. Selected Findings with Cortical Stimulation Technique 107
 - 10.4.1. Correspondence with the Classic Functional-Neuroanatomic Model 107
 - 10.4.2. Divergence from the Classic Neurologic Model 109

- 10.4.3. Electrical Stimulation and Subcortical Structures 111
- 10.5. Challenges and Future Directions 111

- 11. Transcranial Magnetic Stimulation (TMS) as a Tool for Studying Language**
Kate E. Watkins and Joseph T. Devlin

 - 11.1. Introduction 115
 - 11.2. Assessing Hemispheric Specialization for Language with TMS 116
 - 11.2.1. High-Frequency rTMS 116
 - 11.2.2. Low-Frequency rTMS 116
 - 11.2.3. Single-Pulse TMS and EMG 117
 - 11.2.4. Summary 117
 - 11.3. Different Effects of TMS On Task Performance: Posterior Temporal Cortex and Picture Naming 118
 - 11.4. TMS Studies of Semantic and Phonological Processing in LIFG 120
 - 11.5. Speech Perception and the Motor System 120
 - 11.6. Representation of Actions and Verbs in the Motor System and Frontal Cortex 121
 - 11.7. TMS Studies in Patients with Aphasia 122
 - 11.8. Challenges and Future Directions 123

PART

III

EXPERIMENTAL NEUROSCIENCE OF LANGUAGE AND COMMUNICATION
12. Disorders of Phonetics and Phonology

Hugh W. Buckingham and Sarah S. Christman

- 12.1. Introduction 127
- 12.2. Changing Concepts in the Neurolinguistic Analysis of Phonetics and Phonology 127
 - 12.2.1. The Effects of Connectionist Modeling of Phonetics and Phonology 128
 - 12.2.2. Can Phonetics and Phonology Be Precisely Dissociated? 128
- 12.3. Anatomical and Computational Complexity for Broca's Area 129
- 12.4. Intractable Problems in the Neurolinguistics of Segmental Paraphasias 130
 - 12.4.1. Are There Segmental Rules in Language? 130
- 12.5. Challenges and Future Directions 134

13. Impaired Morphological Processing

Gonia Jarema

- 13.1. Introduction 137
 - 13.1.1. Morphological Breakdown 138
 - 13.1.2. Current Issues 138
- 13.2. Noun versus Verb Morphology 138
- 13.3. Regular versus Irregular Morphology 139
- 13.4. Impairments of Inflectional Morphology 140
 - 13.4.1. Tense versus Agreement 140
 - 13.4.2. Gender 142
 - 13.4.3. The Role of Phonology 142
- 13.5. Impairments of Derivational Morphology 143
- 13.6. Impairments in Compounding 143
- 13.7. Challenges and Future Directions 144

14. Disorders of Lexis

Gary Libben

- 14.1. Introduction 147
- 14.2. Disorders of Lexis: A Brief Overview 147
- 14.3. Words in the Brain 149
 - 14.3.1. Word Types Distinguished by Abstractness 149
 - 14.3.2. Word Types Distinguished by Grammatical Category 149
 - 14.3.3. Some Reservations 150
- 14.4. The Domain of Lexical Disorders, the Notion of a Mental Lexicon, and the Notion of Word 150
 - 14.4.1. The Mental Lexicon 151
 - 14.4.2. The Notion of a Word 151
- 14.5. A Framework for Understanding Disorders of Lexis 152
- 14.6. Challenges and Future Directions 152
 - 14.6.1. A Proliferation of Variables 153
 - 14.6.2. The Incorporation of Semantics 153
 - 14.6.3. No Independent Variables 153

15. Disorders of Syntax

Alan Beretta

- 15.1. Introduction 155
- 15.2. The Endgame: Theory Unification 156
- 15.3. Syntactic Comprehension in Broca's Aphasia 157
- 15.4. The Linear Models 157
 - 15.4.1. The Trace Deletion Hypothesis and the Slow Syntax Hypothesis 157
 - 15.4.2. The TDH, the SSH, and Cross-Linguistic Word Order Variations 159
 - 15.4.3. Other Linear Models 160
- 15.5. A Hierarchical Model: The Double-Dependency Hypothesis 160

- 15.6. What Have We Learnt? 161
- 15.7. Challenges and Future Directions 162

16. The Neural Bases of Text and Discourse Processing

Charles A. Perfetti and Gwen A. Frishkoff

- 16.1. Introduction 165
- 16.2. Cognitive and Linguistic Principles of Discourse Processing 165
 - 16.2.1. Mental Models in Text and Discourse Comprehension 166
 - 16.2.2. Grammatical Markers of Discourse Coherence 166
 - 16.2.3. Inferencing and Coherence 166
 - 16.2.4. Summary 167
- 16.3. The Neuroscience of Text and Discourse Comprehension 167
 - 16.3.1. The Role of the Temporal Lobes in Discourse Comprehension 167
 - 16.3.2. The Role of PFC in Discourse Comprehension 168
- 16.4. Right Hemisphere Contributions to Discourse Comprehension 170
 - 16.4.1. Evidence on Right Hemisphere Contributions to Inferencing 170
 - 16.4.2. A Special Role for Right Hemisphere Processing in Global Coherence? 170
 - 16.4.3. Right Hemisphere Involvement in Processing Nonliteral and Emotive Discourse 171
- 16.5. Summary and Conclusions 172
- 16.6. Challenges and Future Directions 173

17. Neuropragmatics: Disorders and Neural Systems

Brigitte Stemmer

- 17.1. Introduction 175
- 17.2. Pragmatic Disorders in Adult Clinical Populations 175
 - 17.2.1. Discourse 176
 - 17.2.2. Non-literal Language and Figurative Language 176
 - 17.2.3. Summary 178
- 17.3. Explaining Linguistic Pragmatic Impairments in Clinical Populations 178
- 17.4. Neural Systems Underlying Pragmatic Abilities 179
 - 17.4.1. Neural Systems in Discourse Processing 179

- 17.4.2. Neural Systems in Non-literal and Figurative Language 181
- 17.4.3. Neural Systems in Mindreading (ToM) 181
- 17.4.4. Summary 185
- 17.5. Challenges and Future Directions 186

18. The Role of Memory Systems in Disorders of Language

Michael T. Ullman

- 18.1. Introduction 189
- 18.2. The Declarative and Procedural Memory Systems 189
- 18.3. Language and the Declarative and Procedural Memory Systems 191
- 18.4. Disorders of Grammar and Procedural Memory 192
 - 18.4.1. Developmental Disorders 192
 - 18.4.2. Adult-Onset Disorders 194
- 18.5. Disorders of Lexicon and Declarative Memory 196
 - 18.5.1. Alzheimer's Disease 196
 - 18.5.2. Semantic Dementia 196
 - 18.5.3. Fluent Aphasia 196
 - 18.5.4. Anterograde Amnesia 196
- 18.6. Challenges and Future Directions 197

19. The Relation of Human Language to Human Emotion

Diana Van Lancker Sidtis

- 19.1. Introduction 199
- 19.2. Language and Emotion: Theoretical Perspectives 199
- 19.3. Universality of Emotion Expression in Language 200
- 19.4. The Linguistic Communication of Emotion 200
- 19.5. Prosodic Communication 201
- 19.6. Syntactic Structures as Reflective of Attitudinal Meaning 201
- 19.7. Language Affects Emotions 202
- 19.8. Pragmatics – Language Use – and Emotional Expression 203
- 19.9. Brain Structures Underlying Emotional Language 203
- 19.10. Affect Lexicon 205
- 19.11. Dysprosodic Disturbances 205
- 19.12. Pragmatic Deficits Following Brain Damage 205
- 19.13. Assessment of Communicative Competence for Emotional Expression 206
- 19.14. Summary 206
- 19.15. Challenges and Future Directions 206

20. Acquired Reading and Writing Disorders

Claudio Luzzatti

- 20.1. Introduction 209
- 20.2. Déjerine's Classical Anatomico-Functional Diagram of Reading (1891, 1892) 210
 - 20.2.1. Pure Alexia and Alexia with Agraphia 210
- 20.3. Classical Neurolinguistic Classification of Acquired Spelling Disorders 210
 - 20.3.1. Aphasic Agraphia 210
 - 20.3.2. Alexia with Agraphia 211
 - 20.3.3. Pure Agraphia 211
 - 20.3.4. Apraxic Agraphia 211
 - 20.3.5. Callosal Agraphia 211
- 20.4. Dual-Route Models of Reading and Cognitive Accounts of Acquired Dyslexia 212
 - 20.4.1. Phonological and Surface Dyslexia 212
 - 20.4.2. The Direct Lexical Route 212
 - 20.4.3. Deep Dyslexia 212
 - 20.4.4. Letter-by-Letter Reading 213
 - 20.4.5. Neglect Dyslexia 213
- 20.5. Dual-Route Models of Spelling and Cognitive Accounts of Acquired Dysgraphia 214
 - 20.5.1. Phonological and Surface Dysgraphia 214
 - 20.5.2. Graphemic Buffer Dysgraphia 214
 - 20.5.3. Peripheral Dysgraphia (Allographic Dysgraphia) 215
- 20.6. Principles for the Assessment of Reading and Spelling Impairments 215
 - 20.6.1. Reading Impairments 215
 - 20.6.2. Spelling Impairments 215
- 20.7. Reading and Spelling Disorders in Languages with Different Scripts 216
- 20.8. Neuroanatomy of Written Language 216
 - 20.8.1. The Anatomy of Reading 216
 - 20.8.2. The Anatomy of Spelling 217
- 20.9. Challenges and Future Directions 217

21. Number Processing

Carlo Semenza

- 21.1. Introduction 219
- 21.2. The Representation of Numbers 220
 - 21.2.1. Number Meaning in the Brain 220
 - 21.2.2. The Number Line 221
 - 21.2.3. Fingers Count (and So Do Other Body Parts) 221
 - 21.2.4. Number Words Are Special: The Number Lexicon 221
 - 21.2.5. On Knowing About Nothing: The Elusive Number Zero 222
- 21.3. Number Manipulation: Transcoding 222

- 21.4. Calculation 223
 - 21.4.1. Signs, Facts and Rules 223
 - 21.4.2. Procedures: Bugs in the Brain? 224
 - 21.4.3. Conceptual Knowledge 224
- 21.5. Numbers and Calculation in the Brain 224
 - 21.5.1. Core Abilities: The Left Parietal Lobe 224
 - 21.5.2. Complex Calculation and the Right Hemisphere 225
 - 21.5.3. Where in the Brain Did Calculating Abilities Evolve from? 226
- 21.6. Challenges and Future Directions 226

22. Neurolinguistic Computational Models

Brian MacWhinney and Ping Li

- 22.1. Introduction 229
- 22.2. The Computer and the Brain 229
- 22.3. Structured Models 230
 - 22.3.1. Module-Level Structured Models 230
 - 22.3.2. Neuron-Level Structured Models 231
- 22.4. Emergent Models 233
 - 22.4.1. Self-Organizing Maps 233
 - 22.4.2. Syntactic Emergence 233
 - 22.4.3. Lesioning Emergent Models 234
- 22.5. Challenges and Future Directions 235

23. Mirror Neurons and Language

Michael A. Arbib

- 23.1. Introduction 237
 - 23.1.1. The Mirror System Hypothesis 237
- 23.2. Multiple Mirror Systems and the Language-Ready Brain 238
- 23.3. Praxis, Language and the Action-Oriented Perception of Scenes 239
 - 23.3.1. From Words to Constructions 239
- 23.4. Modeling the Canonical and Mirror Systems for Grasping 241
- 23.5. Imitation and Mirror Neurons: In Search of Subtlety 242
 - 23.5.1. A Dual-Route Model of Praxis and Language 242
 - 23.5.2. The Dorsal and Ventral Streams and Language 243
- 23.6. Challenges and Future Directions 245

24. Lateralization of Language across the Life Span

Merrill Hiscock and Marcel Kinsbourne

- 24.1. Introduction 247
- 24.2. Brain Development 248

- 24.2.1. Brain Anatomy 248
- 24.2.2. Electrophysiological Evidence 249
- 24.2.3. Behavioral Evidence 249
- 24.2.4. Clinical Evidence 250
- 24.3. Changes Associated with Aging 251
 - 24.3.1. Normal Aging 251
 - 24.3.2. Clinical Evidence 251
- 24.4. Interpretive Complexities 252
 - 24.4.1. General Problems in Studying Life-Span Development 252
 - 24.4.2. Problems Related to the Study of Language Lateralization 252
- 24.5. Challenges and Future Directions 254

25. Interhemispheric Interaction in the Lateralized Brain

Joseph B. Hellige

- 25.1. Introduction 257
- 25.2. Functional Hemispheric Asymmetry 258
- 25.3. Advantages and Challenges of Hemispheric Asymmetry 258
- 25.4. Mechanisms of Interhemispheric Interaction 260
 - 25.4.1. Costs and Benefits of Interhemispheric Interaction 261
 - 25.4.2. Mixing Stimuli That Are Processed in Different Cortical Areas 261
 - 25.4.3. Bihemispheric Redundancy Gain 262
- 25.5. Individual Variation 263
 - 25.5.1. Variation Across the Life Span 263
 - 25.5.2. Cognition and Memory 263
 - 25.5.3. Cognitive Deficits and Emotional Disorders 264
 - 25.5.4. Gender 264
- 25.6. Challenges and Future Directions 265

PART

IV

CLINICAL NEUROSCIENCE OF LANGUAGE

A. Language in Special Populations and in Various Disease Processes

26. Acute Aphasias

Claus-W. Wallesch and Claudius Bartels

- 26.1. Introduction 269
 - 26.1.1. Clinical Variables 269
 - 26.1.2. Pathophysiological Variables 269

- 26.1.3. Neuropsychological Variables 270
- 26.2. Approaches to Classifying Acute Aphasias 271
 - 26.2.1. Study 1: Kertesz (1979) 271
 - 26.2.2. Study 2: Wallesch *et al.* (1992) 272
 - 26.2.3. Study 3: Laska *et al.* (2001) 273
 - 26.2.4. Study 4: Godefroy *et al.* (2002) 273
 - 26.2.5. Study 5: Pedersen *et al.* (2004) 273
 - 26.2.6. Synopsis of Group Studies 274
- 26.3. Non-stable Syndromes of Acute Aphasia 274
 - 26.3.1. Acute Conduction Aphasia 274
 - 26.3.2. Acute Transcortical Motor Aphasia 275
 - 26.3.3. Acute Paraphasia 275
 - 26.3.4. "Pure Motor Aphasia": Apraxia of Speech 276
- 26.4. Challenges and Future Directions 276

27. Language in Dementia

Murray Grossman

- 27.1. Introduction 279
- 27.2. Phonology and Speech Errors in Dementia 279
- 27.3. Lexical Retrieval and Naming Difficulty in Dementia 280
- 27.4. Semantic Memory Difficulty in Dementia 281
 - 27.4.1. Knowledge of the Features Contributing to Concepts 282
 - 27.4.2. Processing Feature Knowledge within Semantic Memory 282
- 27.5. Grammatical Deficits in Dementia 284
- 27.6. Discourse Deficit in Dementia 284
- 27.7. Challenges and Future Directions 285

28. Frontal Lobes and Language

Skye McDonald

- 28.1. Introduction 289
- 28.2. Pragmatic Inference 289
 - 28.2.1. Prefrontal Functions and Inference 290
 - 28.2.2. The Social Nature of Conversational Inference 291
- 28.3. Social Cognition 291
 - 28.3.1. Theory of Mind 291
 - 28.3.2. Emotion Processing 292
 - 28.3.3. Social Knowledge 292
- 28.4. Discourse Production 293
 - 28.4.1. Polite Utterances 293
 - 28.4.2. Narratives 293
 - 28.4.3. Conversations 294
 - 28.4.4. Neuropsychological Underpinnings of Disordered Discourse Production 294
- 28.5. Challenges and Future Directions 295

29. The Torque Defines the Four Quadrants of the Human Language Circuit and the Nuclear Symptoms of Schizophrenia Identify their Component Functions

Timothy J. Crow

- 29.1. Introduction 299
- 29.2. Bi-hemispheric Theory of Language 300
- 29.3. Principles of Connectivity of Hetero-Modal Association Cortex 301
- 29.4. Anomalies of Anatomical Asymmetry and Schizophrenia 302
- 29.5. The Central Paradox and Its Resolution 303
- 29.6. How Do the Nuclear Symptoms Arise? 304
- 29.7. Challenges and Future Directions 305

30. Stuttering and Dysfluency

David B. Rosenfield

- 30.1. Introduction 309
- 30.2. Definition and Clinical Characteristics of Dysfluency 310
 - 30.2.1. Clinical Features of Stuttering 310
- 30.3. The Physiology of Stuttering 313
- 30.4. Theories of Stuttering 314
- 30.5. Animal Modeling of Stuttering 315
- 30.6. Challenges and Future Directions 316

31. Mesial Temporal Lobe Epilepsy: A Model for Understanding the Relationship Between Language and Memory

Joseph I. Tracy and Stephanie B. Boswell

- 31.1. Introduction 319
- 31.2. Do MTLE Patients Show Language Abnormalities? 321
 - 31.2.1. Confrontation Naming 321
 - 31.2.2. Verbal Fluency 321
 - 31.2.3. Comprehension 321
 - 31.2.4. Other Language Skills 322
- 31.3. What Specific Evidence Is There Showing Medial Temporal Lobe Involvement in Language? 322
- 31.4. Are There Anatomical Connections That Allow the Medial Temporal Lobe to Influence Language? 323
- 31.5. What Might the Medial Temporal Lobe Contribute to Language Processing? 324
- 31.6. What Accounts for the Language Deficits in MTLE? 325
- 31.7. Challenges and Future Directions 326

32. Subcortical Language Mechanisms

Stephen E. Nadeau

- 32.1. Introduction 329
- 32.2. Distribution of Pathology in Subcortical Stroke and Degenerative Disorders Associated with Language Impairment 329
 - 32.2.1. The Case of Stroke 330
 - 32.2.2. The Case of Parkinson's Disease 331
 - 32.2.3. The Case of Huntington's Disease 332
- 32.3. Emerging Neuroscience of the Basal Ganglia 332
- 32.4. Mechanisms of Non-thalamic Subcortical Aphasia 332
- 32.5. Summary: Non-thalamic Subcortical Aphasia 333
- 32.6. Emerging Neuroscience of the Thalamus 333
 - 32.6.1. Functional Neuroanatomy of the Thalamus 333
 - 32.6.2. Processing by the Thalamic Gating Mechanism 333
 - 32.6.3. Impairment of Function of the Indirect Thalamic Gate 335
 - 32.6.4. Purpose of the Thalamic Gate 336
- 32.7. Mechanisms of Thalamic Aphasia 336
 - 32.7.1. Phonological Dysfunction 337
 - 32.7.2. Grammatical Dysfunction 337
- 32.8. Summary: Thalamic Aphasia 338
- 32.9. Challenges and Future Directions 338

33. Language and Communication Disorders in Multilinguals

Michel Paradis

- 33.1. Introduction 341
- 33.2. Language Impairments 342
- 33.3. Implicit and Explicit Memory 343
- 33.4. Pathological Language Mixing and Switching 344
- 33.5. Experimental Studies 345
- 33.6. Assessment of Language Disorders in Multilingual Speakers 346
- 33.7. Multilingual Aphasia Rehabilitation 346
- 33.8. Challenges and Future Directions: The Cerebral Organization of Languages 347

34. Language and Communication in Aging

Loraine K. Obler and Seija Pekkala

- 34.1. Introduction 351
- 34.2. Language Changes in Healthy Aging 351
 - 34.2.1. Lexical Retrieval 351
 - 34.2.2. Language Comprehension 352
 - 34.2.3. Oral Language Narrative Production 352
 - 34.2.4. Written Language 353

- 34.3. Aging and Bilingualism 353
- 34.4. Distinguishing Language in Healthy Aging from That in Mild Cognitive Impairment and AD 353
 - 34.4.1. Lexical Retrieval in MCI and AD 354
 - 34.4.2. Comprehension in MCI and AD 354
 - 34.4.3. Spontaneous Speech and Conversation in MCI and AD 355
- 34.5. Explanations for Language Changes in Healthy Aging 355
 - 34.5.1. Neurological Functional–Anatomical Explanations 355
 - 34.5.2. Language-Level Explanations 356
 - 34.5.3. Cognitive-Level Explanations 356
- 34.6. Challenges and Future Directions 356

B. Language and Communication in Developmental Disorders

35. Acquired Epileptiform Aphasia or Landau–Kleffner Syndrome: Clinical and Linguistic Aspects

Gianfranco Denes

- 35.1. Introduction 361
 - 35.1.1. Neuropsychological Assessment of C.S. 361
 - 35.1.2. Language Examination of C.S. 362
- 35.2. Language Regression and Epilepsy 362
 - 35.2.1. Clinical Features of LK Syndrome or AEA 362
- 35.3. The Nature of the Language Deficit 363
- 35.4. The Spectrum of Regressive Language Disorders and Epilepsy 364
- 35.5. Challenges and Future Directions 364

36. Language and Communication in Williams Syndrome

Mayada Elsabbagh

- 36.1. Introduction 367
- 36.2. Language in WS: The Evidence 368
- 36.3. Theoretical Approaches to the Neurocognitive Study of WS 369
- 36.4. Characterizing Language and Communication in WS 370
 - 36.4.1. Hearing and Hyperacusis 370
 - 36.4.2. Auditory Processing 371
 - 36.4.3. Statistical Learning 371
 - 36.4.4. The Social Context 372
 - 36.4.5. Interaction among Language Systems 373
- 36.5. Language in WS: Connecting the Dots 373
- 36.6. Challenges and Future Directions 374

37. Language and Communication Disorders in Autism and Asperger Syndrome

Luca Surian and Michael Siegal

- 37.1. Introduction 377
- 37.2. Language Deficits in Autism 378
 - 37.2.1. Phonology, Morphology, and Syntax 378
 - 37.2.2. Lexical Semantics 379
 - 37.2.3. Pragmatics 380
 - 37.2.4. Prosody 381
 - 37.2.5. Reading 381
- 37.3. Explaining Language and Communication Deficits
in ASD 381
 - 37.3.1. Do Communication Deficits in ASD Result
from a Mindreading Impairment? 382
 - 37.3.2. Enhanced Perceptual Functioning and
Pragmatic Development 383
- 37.4. Challenges and Future Directions 384

C. Recovery from, Treatment and Rehabilitation of Language and Communication Disorders

38. Spontaneous Recovery of Aphasia

Stefano F. Cappa

- 38.1. Introduction 389
 - 38.1.1. Can We Predict the Potential for
Recovery? 389
- 38.2. Soundly Established Factors Affecting
Recovery 390
 - 38.2.1. Lesion Size 390
 - 38.2.2. Lesion Site 390
 - 38.2.3. Clinical Picture 391
 - 38.2.4. Time Post-Onset 391
- 38.3. Factors That May Affect Spontaneous Recovery 391
 - 38.3.1. Etiology 391
 - 38.3.2. Handedness 391
 - 38.3.3. Hemispheric Asymmetries 391
 - 38.3.4. Age 392
 - 38.3.5. Education 392
 - 38.3.6. Multilingualism 392
 - 38.3.7. Mood, Motivation, and Social Support 392
 - 38.3.8. Summary 392
- 38.4. Why Spontaneous Recovery? 392
 - 38.4.1. Neurogenesis 393
 - 38.4.2. Regression of Hypoperfusion and
Diaschisis 393
 - 38.4.3. Remapping 393
 - 38.4.4. Summary 394
- 38.5. Challenges and Future Directions 394

39. Therapeutic Approaches in Aphasia Rehabilitation

Luise Springer

- 39.1. Introduction 397
- 39.2. How to Approach Aphasia Therapy 398
- 39.3. A Stage-Oriented Framework: Fitting the Therapeutic Approach to the Stage of Recovery 399
 - 39.3.1. Activation Therapy 399
 - 39.3.2. Impairment-Specific Therapy 400
 - 39.3.3. Social Participation and Consolidation 400
- 39.4. Specific Neuropsychological and Psycholinguistic Approaches to the Treatment of Lexical and Syntactic Disorders 402
 - 39.4.1. Therapy of Lexical Disorders in Aphasia 402
 - 39.4.2. Therapy of Syntactic Disorders 403
- 39.5. Efficacy Studies of Aphasia Therapy 405
- 39.6. Challenges and Future Directions 405

40. The Pharmacological Treatment of Aphasia

Andrew W. Lee and Argye E. Hillis

- 40.1. Introduction 407
- 40.2. Stroke: How Does It Cause Language Deficits? 407
 - 40.2.1. Do Neurons Die Immediately? 408
 - 40.2.2. The Ischemic Penumbra Defined by the DWI/PWI Mismatch 408
 - 40.2.3. The Diffusion/Perfusion Mismatch in Aphasia 408
 - 40.2.4. Restoring Language Function by Reperfusion 409
 - 40.2.5. The Potential for Neuroprotection 410
- 40.3. Subacute (and Chronic) Stroke: Enhancing Neural Transmission and Neuroplasticity 411
 - 40.3.1. Cholinesterase Inhibitors 411
 - 40.3.2. Piracetam 412
 - 40.3.3. Bromocriptine 412
 - 40.3.4. Dexamphetamine 412
 - 40.3.5. Antidepressants 413
- 40.4. Summary: The State of Play of Pharmacological Intervention in Aphasia 413
- 40.5. Challenges and Future Directions 413

41. Recovery and Treatment of Acquired Reading and Spelling Disorders

Anna Basso

- 41.1. Introduction 417
- 41.2. Illustrative Cases 418

- 41.2.1. Letter-by-Letter Dyslexia (or Pure Alexia) 418
- 41.2.2. Deep Dyslexia 419
- 41.2.3. Surface Dyslexia 419
- 41.2.4. Phonological Dyslexia 420
- 41.2.5. Deep Dysgraphia 420
- 41.2.6. Surface (or Lexical) Dysgraphia 420
- 41.2.7. Phonological Dysgraphia 420
- 41.3. Limits of the Syndrome-Based Approach 420
- 41.4. Suggested Treatment of the Lexical Components 421
 - 41.4.1. Orthographic Input Buffer (Abstract Letter Identification) 421
 - 41.4.2. Conversion Mechanisms 422
 - 41.4.3. Semantic System 422
 - 41.4.4. Input Lexicons (Components B, G) 423
 - 41.4.5. Output Lexicons (Components D, H) 423
 - 41.4.6. Output Buffers (Components E, I) 423
- 41.5. Challenges and Future Directions 423

42. The Role of Electronic Devices in the Rehabilitation of Language Disorders

Brian Petheram and Pam Enderby

- 42.1. Introduction 427
- 42.2. Provision of Therapy 428

- 42.3. Computer-Based Treatment and Language 429
- 42.4. Diagnosis and Assessment 429
- 42.5. Outcome Measurement and Audit 430
- 42.6. Alternative Communication 430
- 42.7. Support for Everyday Life 431
- 42.8. Challenges and Future Directions 431
