

## TABLE OF CONTENTS

## Part II

	Page
Chapter 6. DERIVATIVES OF EXPONENTIAL AND RELATED FUNCTIONS . . . . .	407
6-1. The Tangent Line to the Graph of $x \rightarrow a^x$ at $(0, a^0)$ . . . . .	407
6-2. The Tangent at an Arbitrary Point. . . . .	417
6-3. Applications of Exponential Functions. . . . .	421
6-4. The Derivative of a Logarithmic Function . . . . .	425
6-5. Taylor Approximations to the Function $x \rightarrow e^x$ . . . . .	434
6-6. The Power Formula. . . . .	442
6-7. Approximations to Logarithmic and Root Functions . . . . .	450
Chapter 7. AREA AND THE INTEGRAL. . . . .	459
7-1. Area Under a Graph . . . . .	461
7-2. The Area Theorem . . . . .	474
7-3. The Fundamental Theorem of Calculus. . . . .	484
7-4. Properties of Integrals. . . . .	497
7-5. Signed Area. . . . .	505
7-6. Integration Formulas . . . . .	517
Chapter 8. DIFFERENTIATION THEORY AND TECHNIQUE . . . . .	533
8-1. Differentiability. . . . .	534
8-2. Continuous Functions . . . . .	540
8-3. The Mean Value Theorem . . . . .	546
8-4. Applications of the Mean Value Theorem . . . . .	550
8-5. Sums and Multiples . . . . .	554
8-6. Products . . . . .	565
8-7. Composite Functions. . . . .	573
8-8. The Chain Rule . . . . .	577
8-9. The General Power and Reciprocal Rules . . . . .	590
8-10. The Quotient Rule. . . . .	596
8-11. Inverse Functions. . . . .	603
8-12. Implicitly Defined Functions . . . . .	613

	Page
Chapter 9. INTEGRATION THEORY AND TECHNIQUE. . . . .	619
9-1. The Method of Substitution. . . . .	619
9-2. The Average Ordinate, or Mean Value, of a Function. . . . .	635
9-3. Volumes of Solids of Revolution . . . . .	640
9-4. Estimation of Definite Integrals. . . . .	652
9-5. Taylor Approximations . . . . .	665
APPENDIX 3. MATHEMATICAL INDUCTION . . . . .	679
A3-1. The Principle of Mathematical Induction . . . . .	679
A3-2. Sums and Sum Notation . . . . .	693
APPENDIX 4. FURTHER TECHNIQUES OF INTEGRATION. . . . .	705
A4-1. Substitutions of Circular Functions . . . . .	705
A4-2. Integration by Parts. . . . .	713
A4-3. Integration of Rational Functions . . . . .	722
A4-4. Definite Integrals. . . . .	729
APPENDIX 5. THE INTEGRAL FOR MONOTONE FUNCTIONS. . . . .	737
A5-1. Introduction. . . . .	737
A5-2. Evaluation of an Area . . . . .	739
A5-3. Integration by Summation Techniques . . . . .	745
A5-4. The Concept of Integral. Integrals of Monotone Functions . . . . .	750
A5-5. Elementary Properties of Integrals. . . . .	760
APPENDIX 6. INEQUALITIES AND LIMITS. . . . .	773
A6-1. Absolute Value and Inequality . . . . .	773
A6-2. Definition of Limit of a Function . . . . .	778
A6-3. Epsilonic Technique . . . . .	787
A6-4. Limit Theorems. . . . .	798
APPENDIX 7. CONTINUITY THEOREMS. . . . .	811
A7-1. Completeness of the Real Number System. The Separation Axiom . .	811
A7-2. The Extreme Value and Intermediate Value Theorems for Continuous Functions . . . . .	817
A7-3. The Mean Value Theorem. . . . .	826
A7-4. Applications of The Mean Value Theorem. . . . .	835

	Page
APPENDIX 8. MORE ABOUT INTEGRALS . . . . .	841
A8-1. Existence of the Integral . . . . .	841
A8-2. The Integral of a Continuous Function . . . . .	846
APPENDIX 9. LOGARITHM AND EXPONENTIAL FUNCTIONS AS SOLUTIONS TO DIFFERENTIAL EQUATIONS . . . . .	857
A9-1. The Logarithm as Integral . . . . .	857
A9-2. The Exponential Functions . . . . .	863
