Introduction 5
About the course materials 5
Studying the course 5

1 Statistics and the microcomputer 6
1.1 What is a statistical investigation? 6
1.2 The graphical approach 9
1.3 Some key statistical ideas 12

2 Starting a statistical investigation 16
2.1 Useful skills, usable skills 16
2.2 Preparing for a statistical investigation 18
2.3 The stages of a statistical investigation 21
2.4 Posing the question 23

3 Representing data 25
3.1 What sort of data? 25
3.2 Matching the graph with the data 29
3.3 Matching the graph to the purpose of the investigation 31
3.4 Getting it all together 33

4 Running a statistical investigation 35
4.1 Into the classroom 35
4.2 Collecting the data 38
4.3 Analysing the data 41
4.4 Interpreting the results 43
4.5 Project write-up 44

5 Asking the right questions 45
5.1 How did it go? 45
5.2 Questions, questions 45
5.3 Building towards a quantitative approach 49
5.4 Summary 51

Appendix A: Statistical techniques 52
A.1 Data 52
A.2 Discrete data 53
A.3 Continuous data 55
A.4 Bivariate data 61

Appendix B: Case-studies of statistical investigations 68
B.1 Newspaper investigation 68
B.2 League tables 70
B.3 Estimation of lengths and angles 73
B.4 Index finger index 76
B.5 Which sports teams are the biggest 79
B.6 Estimating marbles in a jar 80
B.7 Relationship between inside leg measurement and running speed 82

Comments on activities 83
