INTRODUCTION

CHAPTER 1. APPROACHES TO ALGEBRA: PERSPECTIVES FOR RESEARCH AND TEACHING
Nadine Bednarz, Carolyn Kieran, Lesley Lee3

1. Historical perspectives in the development of algebra
2. A generalization perspective on the introduction of algebra
3. A problem-solving perspective on the introduction of algebra
4. A modeling perspective on the introduction of algebra
5. A functional perspective on the introduction of algebra

PART I. HISTORICAL PERSPECTIVES IN THE DEVELOPMENT OF ALGEBRA

CHAPTER 2. FROM EUCLID TO DESCARTES: ALGEBRA AND ITS RELATION TO GEOMETRY
Louis Charbonneau15

1. Introduction
2. Algebraic reasoning in Greek geometry
 - 2.1. Equality in Greek geometry
 - 2.1.1. Equality of magnitude
 - 2.1.2. Equality of ratios: the Eudoxian theory of proportions
 - 2.1.3. Apollonius and the *Conics*
 - 2.1.4. Conclusion
 - 2.2. Analysis (as opposed to synthesis)
 - 2.3. Summary
3. Geometric proofs of algebraic rules
 - 3.1. The geometric puzzle of Al-Khwarizmi ($x^2 + 10x = 39$)
 - 3.2. Cardano's resolution of $x^2 = ax + cx$
 - 3.3. Cardano's resolution of $x^3 + 6x = 20$
 - 3.4. Conclusion
4. Algebraic solution of geometric problems
 - 4.1. Chuquet
 - 4.2. Regiomontanus
5. Toward a homogeneous algebra
 - 5.1. Viète and the analytic art
 - 5.2. Descartes
6. Algebraic way of thinking!
 - 6.1. Algebra is not only an extension of the numerical domain
 - 6.2. Algebra is not only a question of symbolism
 - 6.3. Algebra is a way to manipulate relations
 - 6.4. Analysis is at the heart of algebra

CHAPTER 3.	THE ROLES OF GEOMETRY AND ARITHMETIC IN THE DEVELOPMENT OF ALGEBRA: HISTORICAL REMARKS FROM A DIDACTIC PERSPECTIVE	
	<i>Luis Radford</i>	39
1.	The roots of algebra: Arithmetic or geometry?	
1.1.	The geometric current	
1.2.	The numeric current	
1.3.	Diophantus' <i>Arithmetica</i>	
2.	Unknowns and variables: Two different conceptualizations	
3.	Implications for the teaching of algebra	
CHAPTER 4.	THE ROLE OF PROBLEMS AND PROBLEM SOLVING IN THE DEVELOPMENT OF ALGEBRA	
	<i>Teresa Rojano</i>	55
1.	Introduction	
2.	In the beginning were the problems	
3.	Syncopation of algebra: Problems and equations	
4.	Classical problems and the Vietan project	
5.	Words and things	
6.	Lessons from history	
PART II.	A GENERALIZATION PERSPECTIVE ON THE INTRODUCTION OF ALGEBRA	
CHAPTER 5.	EXPRESSING GENERALITY AND ROOTS OF ALGEBRA	
	<i>John Mason</i>	65
1.	Preface	
2.	Introduction	
3.	Particularity and generality	
3.1.	Example: Angle sums	
3.2.	Example: The square-enigma	
3.3.	Example: $3 + 2 = 2 + 3$	
3.4.	Example: Materiality and particularity	
3.5.	Example: Remainder arithmetic	
3.6.	Example: Exercises	
3.7.	Example: Language	
3.8.	Reflection	
4.	Algebra itself	
5.	Difficulties in the classroom	
5.1.	Example: Rush to symbols	
5.2.	Example: Pattern spotting can remain trivial	
5.3.	Example: Formulating formulas	
5.4.	Example: Arithmagons	
5.5.	Example: Rows and columns	
6.	Theoretical perspectives: From action to expression	
7.	Appendix: Say what you see and multiple expressions	

CHAPTER 6. AN INITIATION INTO ALGEBRAIC CULTURE THROUGH GENERALIZATION ACTIVITIES

Lesley Lee87

1. What is algebra?
2. Introducing algebra
3. Teaching algebra
4. Teaching generalization
 - 4.1. Results on the first source problem
 - 4.2. The experimental class based on the first source problem
 - 4.3. The “rules of algebra”
 - 4.4. Results on the second source problem
 - 4.5. The experimental class based on the second source problem
 - 4.6. Reflections on these two generalization sessions
 - 4.7. Reflections on the teaching experiment as a whole
5. Generalization and the introduction of algebra
6. Conclusion
 - 6.1. Concluding reflections on teaching algebra
 - 6.2. Concluding remarks on a generalization approach to algebra

CHAPTER 7. SOME REFLECTIONS ON TEACHING ALGEBRA THROUGH GENERALIZATION

Luis Radford107

1. The epistemological status of generalization
2. What are the kinds and the characteristics of generalizations involved in algebra?
 - 2.1. The problem of validity in generalizing results
 - 2.2. External representations as symbols
3. What are the algebraic concepts that we can reach through numeric generalizations?

PART III. A PROBLEM-SOLVING PERSPECTIVE ON THE INTRODUCTION OF ALGEBRA

CHAPTER 8. EMERGENCE AND DEVELOPMENT OF ALGEBRA AS A PROBLEM-SOLVING TOOL: CONTINUITIES AND DISCONTINUITIES WITH ARITHMETIC

Nadine Bednarz, Bernadette Janvier115

1. Introduction
 - 1.1. The introduction of algebra in a problem-solving context: Building on a well established arithmetic
 - 1.2. How to tackle these questions?

2. Problem solving: Which problems?
 - 2.1. What are the characteristics of problems that are generally presented in algebra? Why are some of these problems so difficult for students?
 - 2.2. What are the features of the problems and what makes them complex? In what ways are they different from problems generally given in arithmetic?
3. Arithmetic reasoning profiles used by students faced with problems generally encountered in algebra
 - 3.1. Take the known state in the problem as the starting point
 - 3.2. Create a starting state by using a fictional number
 - 3.3. Share and then generate
 - 3.4. Take the structure into account
4. The passage to an algebraic mode of treating problems: Continuities and discontinuities
 - 4.1. Hypotheses can be formulated concerning the (more or less easy) passage to algebraic reasoning for these children
 - 4.2. The nature and aims of the interview
 - 4.3. The interview: Its principal stages
 - 4.4. Fundamental changes in the passage from arithmetic to algebra
 - 4.4.1. Conceptualization of the problem
 - 4.4.2. Obstacles in interpreting algebraic reasoning
5. Conclusion

CHAPTER 9. DEVELOPING ALGEBRAIC ASPECTS OF PROBLEM SOLVING WITHIN A SPREADSHEET ENVIRONMENT
Teresa Rojano137

1. Introduction
2. The Anglo/Mexican project: Modeling algebra problems within a spreadsheet environment
3. Methodology
4. Results of analysis from two word problems
 - 4.1. Results from the measurement of a field problem
 - 4.2. Results from the chocolates problem
5. Some remarks on the Anglo/Mexican spreadsheet study
6. Final remarks

CHAPTER 10. ROUGH OR SMOOTH? THE TRANSITION FROM ARITHMETIC TO ALGEBRA IN PROBLEM SOLVING
David Wheeler147

CHAPTER 11. ALGEBRAIC THOUGHT AND THE ROLE OF A MANIPULABLE SYMBOLIC LANGUAGE
Alan Bell151

CHAPTER 12. PLACEMENT AND FUNCTION OF PROBLEMS IN ALGEBRAIC TREATISES FROM DIOPHANTUS TO VIÈTE

Louis Charbonneau, Jacques Lefebvre155

1. Introduction
2. Problems and the structure of four algebraic treatises
 - 2.1. Diophantus and Al-Khwarizmi
 - 2.2. Cardano (1501–1576)
 - 2.3. Viète (1540–1603)
3. Conclusion

CHAPTER 13. PROBLEM-SOLVING APPROACHES TO ALGEBRA: TWO ASPECTS

Alan Bell167

1. Introduction
2. The nature of mathematics and of algebra
 - 2.1. Applied and pure mathematical processes
 - 2.2. Algebra and mathematics
 - 2.3. The four approaches to algebra
 - 2.3.1. The algebra of numbers
 - 2.3.2. Other algebras
3. What needs to be learned in algebra?
 - 3.1. Problem solving, in the broad sense
 - 3.2. Problem solving as forming and solving equations
 - 3.3. Recognizing equivalent equations
 - 3.4. Progression
4. Conclusion

CHAPTER 14. “WHEN IS A PROBLEM?”: QUESTIONS FROM HISTORY AND CLASSROOM PRACTICE IN ALGEBRA

John Mason187

1. Questions from history
2. Classroom practice
3. Algebra in the curriculum
4. Problem solving as a normal mode
5. Comments on classroom practice

PART IV. A MODELING PERSPECTIVE ON THE INTRODUCTION OF ALGEBRA	
CHAPTER 15. MATHEMATICAL NARRATIVES, MODELING, AND ALGEBRA	
<i>Ricardo Nemirovsky</i>	197
1. Introduction	
2. Mathematical narratives	
2.1. On narratives in general	
2.2. On mathematical narratives in particular	
3. Three episodes	
3.1. Ken	
3.1.1. Description	
3.1.2. Analysis	
3.2. Laura	
3.2.1. Description	
3.2.2. Analysis	
3.3. Steve	
3.3.1. Description	
3.3.2. Analysis	
3.4. Repair, playing out, and idealization	
4. Mathematical narratives and early algebra	
CHAPTER 16. REFLECTIONS ON MATHEMATICAL MODELING AND THE REDEFINITION OF ALGEBRAIC THINKING	
<i>M. Kathleen Heid</i>	221
1. What can we learn about students' thinking from mathematical narratives?	
2. How do students adjust their narratives when they note contradictions? How do they use knowledge of overall trends?	
3. How do students use mathematical knowledge in constructing their narratives?	
4. To what extent does the use of a computer confine students' mathematical constructions?	
CHAPTER 17. MODELING AND THE INITIATION INTO ALGEBRA	
<i>Claude Janvier</i>	225
1. Algebra and the use of letters	
1.1. Letters: Unknown or not?	
1.2. The use of the letter: Unknown or variable?	

2. Modeling and algebra
 - 2.1. The usual definition of modeling
 - 2.2. Modeling and its formulation phase in school algebra
 - 2.3. Modeling and magnitudes
 - 2.3.1. Magnitudes and their difficulties
 - 2.3.2. Extensive and intensive magnitudes
 - 2.3.3. Models, magnitudes, and approximations
 - 2.4. Modeling not always a panacea!
3. Modeling and a functional approach to algebra
 - 3.1. A functional approach to algebra
 - 3.2. The notion(s) of function and its (or their) representations
 - 3.3. Magnitude and functional approaches
 - 3.4. $F(x)$ or $T(x)$?
4. Concluding remarks

PART V. A FUNCTIONAL PERSPECTIVE ON THE INTRODUCTION OF ALGEBRA

CHAPTER 18. A TECHNOLOGY-INTENSIVE FUNCTIONAL APPROACH TO THE EMERGENCE OF ALGEBRAIC THINKING

M. Kathleen Heid239

1. The curricular approach of *Computer-Intensive Algebra* to the development of mathematical ideas
2. The pedagogical assumptions of *Computer-Intensive Algebra*
 - 2.1. Environmental and organizational assumptions
 - 2.2. Assumptions about learning
 - 2.3. Related assumptions about teaching
3. Research on the *Computer-Intensive Algebra* curriculum
 - 3.1. Analysis of level of questions of the *Computer-Intensive Algebra* text
 - 3.2. Analysis of the taught curriculum
 - 3.3. Analysis of the learned curriculum
 - 3.3.1. Problem-solving abilities
 - 3.3.2. Understanding of the concepts of function and variable
 - 3.3.3. Tool-assisted strategies for solving problems
 - 3.3.4. Facility with beginning mathematical modeling activities
 - 3.3.5. Traditional algebra skills
 - 3.4. Current perspectives on *Computer-Intensive Algebra* research
4. How does *Computer-Intensive Algebra* relate to the other three approaches?
5. Conclusions

CHAPTER 19. INTRODUCING ALGEBRA BY MEANS OF A TECHNOLOGY-SUPPORTED, FUNCTIONAL APPROACH

Carolyn Kieran, André Boileau, Maurice Garançon.....257

1. What is a functional approach?
2. What does such a functional approach bring to the initial learning of algebra?
 - 2.1. Study 1 (1987-1988): Guess-and-test numerical solving methods
 - 2.2. Study 2 (1988-1989): Generation of functional algorithmic representations
 - 2.3. Study 3 (1989-1990): Transition to more standard algebraic representations
 - 2.4. Study 4 (1990-1991): Use of Cartesian graphs in solving problems
 - 2.5. Study 5 (1991-1992): Producing, interpreting, and modifying graphs
 - 2.6. Study 6 (1992-1993): Structural extension of a process-oriented conception
3. Concluding remarks
 - 3.1. Letters as unknowns versus letters as variables
 - 3.2. Roles of the various representations of functions
 - 3.3. Our approach to problem solving in the *CARAPACE* computer environment: Is it algebra?
4. Appendix: An initiation into algebra in the *CARAPACE* environment
 - 4.1. The use of functional situations
 - 4.2. The contribution of the computer
 - 4.3. The *CARAPACE* environment
 - 4.3.1. Initial activities
 - 4.3.2. Some features of *CARAPACE*
 - 4.3.3. The role of Cartesian graphs in the *CARAPACE* environment
 - 4.3.4. Initiation into Cartesian graphs in the *CARAPACE* environment
 - 4.4. In closing

CHAPTER 20. A FUNCTIONAL APPROACH TO ALGEBRA: TWO ISSUES THAT EMERGE

Ricardo Nemirovsky295

1. Pointwise/variational approaches to functions
2. Real world problems
 - 2.1. Real world problems enable students to approach new mathematical concepts using ideas and situations that are familiar to them
 - 2.2. Real world problems suggest to students that the formal definitions adopted in algebra are natural and reasonable
 - 2.3. Real world problems offer fruitful contexts for students learning to deal with complexity

PART VI. SYNTHESIS AND DIRECTIONS FOR FUTURE RESEARCH

CHAPTER 21. BACKWARDS AND FORWARDS: REFLECTIONS ON DIFFERENT APPROACHES TO ALGEBRA

David Wheeler317

1. Algebra in history
2. What is algebra?
3. Interlude
4. Four approaches
5. Big ideas
6. The four questions
 - 6.1. What are the essential characteristics of algebraic thinking?
 - 6.2. What can algebra learning build on?
 - 6.3. What are the obstacles to algebra learning?
 - 6.4. How shall we choose which approach to take to “beginning algebra”?
7. Discussion
