 2.3 Absolute Value 42 2.4 Well Ordering and Mathematical Induction 44 2.5 Other Forms of Induction 51 2.6 Elementary Concepts: Divisibility and the Division Algorithm 56 2.7 Greatest Common Divisor and Euclidean Algorithm 59 2.8 Prime Numbers 64 2.9 The Fundamental Theorem of Arithmetic 67 2.10 Congruences 74 2.11 Residue Classes 79 2.12 Residue-Class Arithmetic 82 2.13 Linear Congruences and Chinese Remainder Theorem 84 2.14 Euler φ-Function 86 2.15 The Theorems of Fermat and Euler 89 Chapter 3 Permutations 91 	2.1	The Arithmetic Properties of the Integers 33
 2.4 Well Ordering and Mathematical Induction 44 2.5 Other Forms of Induction 51 2.6 Elementary Concepts: Divisibility and the Division Algorithm 56 2.7 Greatest Common Divisor and Euclidean Algorithm 59 2.8 Prime Numbers 64 2.9 The Fundamental Theorem of Arithmetic 67 2.10 Congruences 74 2.11 Residue Classes 79 2.12 Residue-Class Arithmetic 82 2.13 Linear Congruences and Chinese Remainder Theorem 84 2.14 Euler φ-Function 86 2.15 The Theorems of Fermat and Euler 89 Chapter 3 Permutations 91 	2.2	The Order Properties of the Integers 37
 2.5 Other Forms of Induction 51 2.6 Elementary Concepts: Divisibility and the Division Algorithm 56 2.7 Greatest Common Divisor and Euclidean Algorithm 59 2.8 Prime Numbers 64 2.9 The Fundamental Theorem of Arithmetic 67 2.10 Congruences 74 2.11 Residue Classes 79 2.12 Residue-Class Arithmetic 82 2.13 Linear Congruences and Chinese Remainder Theorem 84 2.14 Euler φ-Function 86 2.15 The Theorems of Fermat and Euler 89 Chapter 3 Permutations 91 	2.3	Absolute Value 42
 2.6 Elementary Concepts: Divisibility and the Division Algorithm 56 2.7 Greatest Common Divisor and Euclidean Algorithm 59 2.8 Prime Numbers 64 2.9 The Fundamental Theorem of Arithmetic 67 2.10 Congruences 74 2.11 Residue Classes 79 2.12 Residue-Class Arithmetic 82 2.13 Linear Congruences and Chinese Remainder Theorem 84 2.14 Euler φ-Function 86 2.15 The Theorems of Fermat and Euler 89 Chapter 3 Permutations 91	2.4	Well Ordering and Mathematical Induction 44
Division Algorithm 56 2.7 Greatest Common Divisor and Euclidean Algorithm 59 2.8 Prime Numbers 64 2.9 The Fundamental Theorem of Arithmetic 67 2.10 Congruences 74 2.11 Residue Classes 79 2.12 Residue-Class Arithmetic 82 2.13 Linear Congruences and Chinese Remainder Theorem 84 2.14 Euler φ -Function 86 2.15 The Theorems of Fermat and Euler 89 Chapter 3 Permutations 91	2.5	Other Forms of Induction 51
2.8 Prime Numbers 64 2.9 The Fundamental Theorem of Arithmetic 67 2.10 Congruences 74 2.11 Residue Classes 79 2.12 Residue-Class Arithmetic 82 2.13 Linear Congruences and Chinese Remainder Theorem 84 2.14 Euler φ-Function 86 2.15 The Theorems of Fermat and Euler 89 Chapter 3 Permutations 91	2.6	
 2.9 The Fundamental Theorem of Arithmetic 67 2.10 Congruences 74 2.11 Residue Classes 79 2.12 Residue-Class Arithmetic 82 2.13 Linear Congruences and Chinese Remainder Theorem 84 2.14 Euler φ-Function 86 2.15 The Theorems of Fermat and Euler 89 Chapter 3 Permutations 91	2.7	Greatest Common Divisor and Euclidean Algorithm 59
 2.10 Congruences 74 2.11 Residue Classes 79 2.12 Residue-Class Arithmetic 82 2.13 Linear Congruences and Chinese Remainder Theorem 84 2.14 Euler φ-Function 86 2.15 The Theorems of Fermat and Euler 89 Chapter 3 Permutations 91 	2.8	Prime Numbers 64
 2.11 Residue Classes 79 2.12 Residue-Class Arithmetic 82 2.13 Linear Congruences and Chinese Remainder Theorem 84 2.14 Euler φ-Function 86 2.15 The Theorems of Fermat and Euler 89 Chapter 3 Permutations 91	2.9	The Fundamental Theorem of Arithmetic 67
 2.12 Residue-Class Arithmetic 82 2.13 Linear Congruences and Chinese Remainder Theorem 84 2.14 Euler φ-Function 86 2.15 The Theorems of Fermat and Euler 89 Chapter 3 Permutations 91	2.10	Congruences 74
2.13 Linear Congruences and Chinese Remainder Theorem 84 2.14 Euler φ -Function 86 2.15 The Theorems of Fermat and Euler 89 Chapter 3 Permutations 91	2.11	Residue Classes 79
2.14 Euler φ -Function 86 2.15 The Theorems of Fermat and Euler 89 Chapter 3 Permutations 91	2.12	Residue-Class Arithmetic 82
2.15 The Theorems of Fermat and Euler 89 Chapter 3 Permutations 91	2.13	Linear Congruences and Chinese Remainder Theorem 84
Chapter 3 Permutations 91	2.14	Euler φ -Function 86
	2.15	The Theorems of Fermat and Euler 89
3.1 Permutations: Introduction 91	Chapter 3	Permutations 91
	3.1	Permutations: Introduction 91

3.2 3.3	t i
Chapter 4	The Theory of Groups 104
4.1 4.2 4.3 4.4	Elementary Consequences of the Definition of a Group 113 Multiplication Table for a Finite Group 114 Isomorphism 116
4.3	* * * * * * * * * * * * * * * * * * *
4.6 4.7 4.8 4.9 4.1 4.1 4.1	Cyclic Groups 128 Cosets and Lagrange's Theorem 137 Homomorphisms and Normal Subgroups 143 0 Factor Groups and the First Isomorphism Theorem 152 1 Permutation Groups and Cayley's Theorem 159 2 Direct Products 162 3 Automorphisms 167
Chapter 5	The Theory of Rings 180
5.1 5.2 5.2 5.4 5.6 5.7 5.8 5.9 5.1 5.1	Isomorphism of Rings 184 Elementary Properties of Rings 187 Some Special Types of Rings 190 Homomorphisms, Kernels, and Ideals 194 Quotient Rings 198 Embedding Theorems and Fields of Quotients 201 Polynomial Rings 206 Division Algorithm for Polynomials 214 Consequences of the Division Algorithm 216 Prime and Maximal Ideals 220 Euclidean Domains and Unique Factorization 225
Chapter 6	The Real and Complex Number Fields 231
6.1 6.2 6.3 6.4	The Need for the Real Number System 231 Ordered Fields 233 Dedekind Cuts 236 The Arithmetic of the Real Numbers: (R,+) Is an Abelian Group 239
6.5	
6.6	
6.7	The Real Numbers as Ordered Field Extension of the Rational Numbers 248
6.8 6.9	
5,0	The Real Number System and Decimal Notation 253

6.10 6.11	The Complex Numbers C; Polynomials over R and C Algebraic and Transcendental Numbers 258	255
Chapter 7	Vector Spaces 263	
7.1 7.2	Introduction to Vectors 263 Definition, Examples, and Elementary Properties of Vector Spaces 268	
7.3	Linear Combinations and Spanning Sets 275	
7.4	Linear Dependence and Independence 278	
7.5	Bases 282	
7.6	Dimension 287	
7.7	Theorems Relating Dimensions 291	
Chapter 8	Linear Transformations and Matrices 296	
8.1	Examples of Linear Transformations and Elementary Results 296	
8.2	Range Space, Null Space, and Quotient Space of a Linear Transformation 306	
8.3	The Arithmetic of Linear Transformations: Linear Combinations 309	
8.4	The Arithmetic of Linear Transformations: Composition	313
8.5	Matrices: Introduction 318	
8.6	Matrices: Linear Combinations 323	
8.7	Matrices: Products 330	
8.8	Identity Matrices and Inverse Matrices; Transformation of Coordinates 339	
8.9	Change of Basis 348	
Chapter 9	Determinants 357	
9.1	Determinants 357	
9.2	Computing Determinants 362	
9.3	Cofactors 372	
9.4	Determinant of a Product of Two Matrices 377	
9.5	Inverses of Matrices; Cramer's Rule 381	
9.6	Determinant of a Linear Transformation 388	
Chapter 10	Rank, Equivalence, and Systems of Linear Equations	391
10.1	Column Rank of a Matrix A; Rank of a Linear Transformation T 391	
10.2	Elementary Row and Column Operations; Elementary Matrices 395	
10.3	Column Reduced Echelon Matrices and Column Rank	403
10.4	Row Rank and Determinantal Rank; Rank 410	
10.5	Normal Forms of Matrices 420	
10.6	Systems of Homogeneous Linear Equations 430	
10.7	Systems of Nonhomogeneous Equations 438	

Chapter 11	Characteristic Vectors, Orthogonality, and Diagonalization 444
11.1	Characteristic Roots and Characteristic Vectors 444
11.2	Inner Products 454
11.3	Length, Distance, and Angle; the Cauchy-Schwarz Inequality 462
11.4	Orthogonality; the Gram-Schmidt Process 466
11.5	Orthogonal Transformations and Orthogonal Matrices 474
11.6	Diagonalization of Hermitian and Symmetric Matrices 482
