

Contents

Preface	iv
Introduction	1
PART 1. CONCEPTS	3
1 Sets	5
2 Coordinates	10
3 Distance	18
4 Area and density	26
5 Gradient and profiles	31
6 Time, speed and rate	39
7 Vectors	42
8 Quantification	46
9 The shape of areas	53
10 Points on lines	59
11 Points in areas	65
12 Centres	70
13 Boundaries	77
PART 2. MODELS	83
14 The area around a point	85
15 Competing points	91
16 Interaction between points	95
17 Finding the best route	104
18 Density of networks	110
19 Order of importance of points	116
20 Clustering into regions	121
21 Patterns of points	130
22 The simulation of diffusion	138
23 The geometry of movement	145
24 Transformations in space	149
25 New views of space	155
26 Topological ideas	161
27 Matrices and networks	170
28 Non-topological ideas in networks	176
29 Routes in networks	182
30 Network trees and river systems	188
Bibliography	195
Index	198
