CONTENTS

Chapter 1	INTRODUCTION		1
Section	1.1	The Role of Mathematics in Theory Construction	2
	1.2	Mathematical Theories in Psychology	5
	1.3	Behavior as a Probabilistic Process	11
	1.4	Parameter Estimation	15
	1.5	Brief Historical Review	19
Chapter 2	CONCEPT IDENTIFICATION		25
Section	2.1	A Vocabulary for Describing Concept Identification Experiments	28
	2.2	The Theory	32
	2.3	Analysis of Presolution Data	39
	2.4	Mathematical Derivations from the Model	49
	2.5	Sequential Statistics	63
	2.6	Estimation of Parameters	69
	2.7	Concluding Comment	73
Chapter 3	PAIRED-ASSOCIATE LEARNING		75
Section	3.1	The One-Element Model	84
	3.2	Derivations from the One-Element Model	88
	3.3	Fit of the One-Element Model to Paired-Associate Data	105
	3.4	The Single-Operator Linear Model	108
	3.5	Further Developments	117
	3.6	The Random-Trial Increments Model	120
Chapter 4	CHOICE BEHAVIOR		135
Section	4.1	The Paradigm for Choice Experiments	137
	4.2	Luce's Choice Axiom	139

4.3 A Hypothesis about Stimulus Ranking 150
4.4 A Random Walk Model 155
4.5 Choice Times 165
4.6 Other Random Walk Models for Choice Behavior 175
4.7 A Random Walk Model with Memory 181
4.8 Concluding Comments 184

Chapter 5 SIGNAL DETECTION AND PROBABILITY LEARNING 187

Section 5.1 Two-Alternative Forced-Choice Detection Task 188
5.2 Theory 192
5.3 Mathematical Derivations 200
5.4 Analysis of Signal Detection Data 211
5.5 Sequential Phenomena 220
5.6 Probability Learning and Outcome Structures 226
5.7 An Experiment Involving Both Signal Detection and Probability Learning 231
5.8 Alternative Models for the Bias Process 242
5.9 Concluding Remarks 245

Chapter 6 AVOIDANCE CONDITIONING 249

Section 6.1 The Two-Element Model 252
6.2 The Linear Model 268
6.3 The Linear Model for Experimenter-Controlled Events 284
6.4 The Beta Model 290
6.5 A Model for Extinction of Avoidance Habits 300

Chapter 7 SOCIAL AND ECONOMIC BEHAVIOR 309

Section 7.1 Two-Person Interactions: Experimental Procedure and Theory 311
7.2 Ergodic Markov Chains 317
7.3 Results and Analysis of an Interaction Experiment 322
7.4 Economic Oligopoly 329
7.5 Other Developments 339

Chapter 8 STIMULUS SAMPLING THEORY 343

Section 8.1 The General Theory: Terminology and Basic Assumptions 343
8.2 The *N*-Element Pattern Model 352
8.3 Conditioning States and Related Probabilities 354
8.4 The Mean Learning Curve 361
8.5 Sequential Predictions 363
8.6 Concluding Comment 372

Chapter 9 PARAMETER ESTIMATION 373

Section 9.1 Properties of Estimators 374
9.2 Maximum Likelihood Estimates for Markov Chains 378
9.3 Maximum Likelihood Estimate for the One-Element Paired-Associate Model 382
9.4 Minimum Chi-Square Estimates for Markov Chains 385
9.5 Minimum Chi-Square Estimates for Specific Sequences 387
