

## CONTENTS

PREFACE	page xiii
CONTRIBUTORS	xv
CHAPTER 1. CLASSICAL THEORIES OF LEARNING	1
<i>I. Introduction</i>	1
<i>II. Pioneers of Learning Theory: Thorndike and Pavlov</i>	3
1. Basic Similarity of Approach: Behaviour and Learning	3
2. Contrasts	5
3. The Heritage of Thorndike's work and its Limitations	7
4. Pavlov's Contribution	9
<i>III. Gestalt Psychology</i>	10
1. Introduction	11
2. Relational Perception	12
3. Insight Learning	13
4. Trace Theory of Memory	16
5. Evaluation	17
<i>IV. Tolman's Purposive Behaviourism</i>	18
1. Introduction	18
2. Comparison with Gestalt Psychology	20
3. Comparison with other Behaviourisms	21
4. Vicarious Trial-and-Error	24
5. Historical Significance of Tolman's work	25
<i>V. Hullian Theory</i>	27
1. Reinforcement, Learning and Performance	28
2. Incentive and Drive	29
3. Generalization and Inhibition	31
4. Secondary Reinforcement and the Goal Gradient	34
5. The Antedating Response	36
6. Evaluation	43
7. Language as a Mediating Response	48
<i>VI. Skinner's Descriptive Behaviourism</i>	51
1. Introduction	51
2. The Concept of Operant Behaviour	55

3. The Regulation of Operant Behaviour	page 56
4. Verbal Behaviour	68
5. Skinner's Treatment of Emotion and Drive	76
6. Evaluation	78
<i>VII. Concluding Remarks</i>	80
<b>CHAPTER 2. BRAIN MECHANISMS AND LEARNING</b> by <i>Nevile Moray</i>	89
<i>I. A Basic Description of Learning</i>	89
<i>II. Afferent Processes of the Brain</i>	92
1. How the Brain Acquires Information	92
2. The Common Language of the Brain	94
3. The Organization of a Sensory Pathway	97
<i>III. Central Processes of the Brain</i>	100
1. Habituation and Sleep	100
2. Arousal and Attention	101
3. The Coding and Storage of Information	101
<i>IV. Mechanisms of Response</i>	102
1. The Role of Feedback in Behaviour	102
2. Feedback and Learning	104
3. Memory	105
<i>V. The Physiological Processes of Learning</i>	106
1. Kinds of Learning and Forgetting	106
2. The Mechanisms of Learning	108
<i>VI. Factors in Human Learning</i>	110
1. The Importance of Language	110
2. The Frontal Lobes	110
3. Age, Development and the Nervous System	111
<b>CHAPTER 3. STRUCTURAL INTERPRETATIONS OF BEHAVIOUR AND LEARNING</b>	116
<i>I. S-R and Structural Approaches: Basis of Distinction</i>	116
1. Psychology and the Functional Analysis of Processes deemed to Occur in the Brain	116
2. A Categorization of Psychological Theories Based on the Role of the Stimulus	118

<i>II. Critique of the Hullian Model</i>	page 121
1. The Model Implied by Hullian Theory	121
2. Critique of the Hullian Concept of Stimulus	127
3. Drive and Need-Reduction	129
4. The Nature of 'Response'	130
<i>III. Two Sorts of Black Box</i>	134
<i>IV. Structural Models of Behaviour I: The Ethological Model of N. Tinbergen</i>	137
<i>V. Structural Models of Behaviour II: Deutsch's Theory of Learning</i>	143
1. The Model	143
2. Evaluation of Deutsch's Theory	148
<i>VI. Summary</i>	152
<b>CHAPTER 4. THE REGULATION OF BEHAVIOUR</b>	<b>156</b>
<i>I. Perceptual Recognition and Perceptuo-motor Control</i>	156
1. Introduction	156
2. The Comparator System	157
3. The Selector Link	160
4. Regulation Via the Link	164
5. Direction in Behaviour: The Comparator as a Filter	167
6. Channel Identification	170
<i>II. Schema and Strategy</i>	174
1. Introduction	174
2. Piaget's Concept of the Schema	175
3. The Schema in British Psychology	177
4. The Schema as an Image of Reality	179
5. Strategies in the Regulation of Behaviour	180
6. Plans	182
7. Simultaneous Strategies	185
8. Strategies and Schemata	186
<i>III. The Role of the 'What-Is-It? Reflex'</i>	189
1. Statement of Hypotheses	189
2. Discussion of Implications	192
<i>IV. Learning and Behavioural Regulation</i>	194
1. Introduction	194
2. Successive Achievements of Learning	197

<i>V. Basic Mechanisms of Learning</i>	page 206
1. Conditioning and the 'What-Is-It? Reflex'	207
2. Instrumental Learning	208
3. Activity of the Subject in Instrumental Learning	210
4. Discrimination Learning	214
5. Summary	216
<i>VI. Concluding Remarks</i>	218
<b>CHAPTER 5. DEVELOPMENT IN LEARNING:</b>	
<b>INTRODUCTION</b>	226
<i>I. Phyletic Differences in Learning</i>	226
1. Limitations in the Learning of Fishes	226
2. Learning Set	234
<i>II. Ontogenesis of Human Learning</i>	241
<i>III. Development in Generalization</i>	255
1. Learning Sets as Higher-order Strategies	255
2. Learning Set, Reversal, Probability and Ontogenetic Development	259
<i>IV. Imitation</i>	264
1. Imitation and Following	264
2. Imitation in the Human Infant	267
3. Imitation in the Chimpanzee	271
4. Learning by Imitation	272
<i>V. From Chimpanzee to Man</i>	274
1. Functions of Language: The Role of Representation	274
2. From Imitation to Representation: The Evolution of Play	278
3. Delayed Response and Double-Alternation	281
4. Significance of Representation	285
5. Analytical and Reversible Representation: the Oddity Problem	288
<i>VI. Summary</i>	295
<b>CHAPTER 6. PROBLEMS OF MOTIVATION by</b>	
<i>E. A. Lunzer and J. F. Morris</i>	304
<i>I. The Common-sense View of Motivation</i>	304
1. Statement	304
2. Objections to the Common-sense View	305

<i>II. Statement of Problems</i>	page 307
<i>III. McDougall and the Doctrine of Instincts</i>	310
<i>IV. Drives and Needs</i>	314
1. Hull's version of 'drive' and related concepts	315
2. Skinner's Treatment of Drive	318
3. Drive as the Activation of Behavioural Structures	320
4. Mental and Physiological Correlates of Drive	325
<i>V. Human Motivation</i>	329
1. Representation and the Self-Concept	329
2. Identification and the Moulding of Attitudes and Values	334
<i>VI. Summary</i>	353
<b>CHAPTER 7. LEARNING AND LEARNING THEORY</b>	362
<b>INDEX</b>	381
