

# Contents

- 1. A Review of Theories of Intelligence 1**
  
- 2. Genetic Epistemology and Mathematics 5**
  - Logic and Psychology 6
  - Basic Mathematical and Psychological Structures 7
  - Biology and Intelligence 9
  - Piaget, Skinner, and Performance Objectives 9
  - Mathematical Models for Children's Thinking 11
  
- 3. Jean Piaget: Biography and Views on Education 14**
  - Piaget's Biography 14
  - Professional Education 19
  - Training Elementary Teachers 19
  - Early Childhood (Preschool) Instruction 20
  - Teaching Aids 22
  - Motivating the Learner 22
  - Social Interaction Versus Individualized Programming in Lesson Planning 23
  
- 4. Piaget's Theory of Intellectual Development 24**
  - Stages of Development 24
  - Factors Affecting Mental Development 31

Equilibration as a Biological Process	34
Psychological and Mathematical Operations	35
Definition of an Operation	36
Biology, Mathematics, and Three Types of Knowledge	36
Learning	38
Language and Intelligence	44
Social Interaction	46
Memory and Intelligence	46
Piaget and IQ Tests	49

## 5. Logical Classification 51

First Experiences in Logical Classification	52
Simple Classification	52
Relations Between Sets or Classes	55
The Inclusion Relation	58
The Quantifiers “All,” “Some,” “None,” and “One”	59
Hierarchical Classification	62
Multiple Classification	63
Logical Classification Games	63
Logical Connectives	65
“Brother of” and “Right and Left of” as Logical Relations	71
Implications	78
Exercise	80

## 6. First Experiences with Number 81

Class and Number	82
Conservation of Number	82
Stages of Development	84
Three Levels of Counting to Determine Number Relations	92
Other Types of Conservation and Age Levels	95
Seriation (Ordering), Transitivity, and Ordinal Number	97
Place Value and Base Ten	103
Implications for Teaching	105

## 7. Addition and Subtraction 111

Grouping and the Inclusion Relation	111
Addition of Number	117

The Commutative Property of Addition	122
The Associative Property of Addition	124
Subtraction of Numbers Expressed with Two and Three Digits	127
Implications for Teaching Addition and Subtraction	127

## 8. Multiplication and Division 133

Multiplicative Classification (Matrices)	134
Development of the Equivalence Relation	136
Division into Equal Parts	142
Implications and Follow-up Activities	145
Distributive Property of Multiplication over Addition	150

## 9. Fractions and Proportions 153

Fractions	153
Exercise	159
Ratio and Proportion	159
Speed and Time	160
Proportions and Probability	162
Geometrical Proportions	163

## 10. Time 166

Sequencing of Events	166
Duration	168
Physical Time	169
Transitivity	170
Measurement of Time	170
Summary and Implications	174
Speed and Time	175
Conservation and Measurement of Time	177
Time in Terms of Age	180

## 11. The Growth of Logical Thought 183

Egocentrism of Thought	183
Introspection	184

Transduction	185
Definitions in Logical Thinking	186
Children's Understanding of Connectives in Logic	188
Inductive and Deductive Reasoning	194
Stages of Logic or Reasoning	205
Implications for the Teacher	207

## **12. How a Child Begins to Think About Space 209**

Topology	210
Relations in Topology	214
The Topological Relation of Order	216
The Topological Relation of Surrounding or Enclosure	219
The Relations of Continuity and Infinity	223
Implications	226

## **13. From Topology to Euclidean Geometry 232**

Pictorial Space	232
Drawing Basic Euclidean Shapes	234
Perception and Thought	238
Space on a Perceptual Basis	239
Learning Euclidean Shapes	239
Teaching Euclidean Shapes	244
Implications	245

## **14. Measurement in One Dimension 247**

First Attempts at Measurement	249
Conservation of Distance and Length	253
Measurement of Length	263
Implications	269

## **15. Structuring Space in Terms of Vertical and Horizontal Axes 271**

A Child's Frame of Reference	272
General Systems of Reference	277
Making a Map	280

	Construction of a Layout	282
	Implications	286
<b>16.</b>	<b>Measurement in Two and Three Dimensions</b>	<b>288</b>
	Locating a Point in Two-Dimensional Space	289
	Area Measurement	290
	Conservation and Measurement of Area	292
	Measurement of Volume	299
	Construction of Equal Angles	303
	Implications for Teaching	311
<b>17.</b>	<b>Projective Geometry</b>	<b>314</b>
	Linear Perspective (Straightness)	315
	Objects Seen in Perspective	319
	Projection of Shadows	321
<b>18.</b>	<b>The Mathematics Laboratory— An Individualized Approach to Learning</b>	<b>325</b>
	How to Begin a Mathematics Laboratory	328
	Moral Behavior	333
	Materials and Their Use	335
	Care of Materials	343
	Sample Assignments for Children	351
	Exercise for Teachers	352
<b>19.</b>	<b>Conclusions</b>	<b>353</b>
	The Importance of Developmental Stages	354
	Testing	357
	Interview Technique	358
	The Classroom as a Laboratory	359
	Social Interaction and Lesson Planning	360
	Acceleration of Learning	361
	The New Math	362
	Educational Philosophy and Psychology	362
	The Acquisition of Knowledge	363
	Teacher Training	364
	<b>Appendix: Diagnostic Activities</b>	<b>367</b>
	<b>Index</b>	<b>369</b>
