

Contents

Chapter	Page
1. Genetic Epistemology and Mathematics	1
2. Jean Piaget and Education	10
3. Piaget's Theory of Intellectual Development	19
4. Knowing versus Performing Mathematics	47
5. Logical Classification	61
6. Ordering and Seriation	90
7. Cardinal Number	109
8. Memory and Mathematics	131
9. Addition and Subtraction	141
10. Multiplication and Division	165
11. Fractions and Proportions	185
12. Time	198
13. Chance and Probability	210
14. The Growth of Logical Thought	227
15. How a Child Begins to Think About Space	254
16. From Topology to Euclidean Geometry	278
17. Measurement in One Dimension	293
18. Structuring Space in Terms of Vertical and Horizontal Axes	317
19. Measurement in Two and Three Dimensions	334
20. Projective Geometry	360
21. The Mathematics Laboratory — An Individualized Approach to Learning	371
22. Conclusions	399
Appendix I — Activities by Title	412
Appendix II — Ages at Which Mathematical Concepts Develop	414
