Table of Contents

Acknowledgements 10

Introduction 11

Chapter 1 – THE ANATOMY OF A MICROCOMPUTER

1.1 Hardware 13
1.2 Programming 14
1.3 Storage of variables 16
1.4 External storage of programs 17
1.5 The video display unit (VDU) 18
1.6 Printers 19

Chapter 2 – ALGORITHMS AND PROCEDURES

2.1 Introduction 21
2.2 The Dictionary Game 23
2.3 Russian Peasant Multiplication 26
2.4 Notating algorithms 27
2.5 A magic square problem 32

Chapter 3 – FUNCTIONS AND EQUATIONS

3.1 Functions 34
3.2 The Bookshelf Problem 35

3.3 Cops and robbers 36
3.4 The solution of algebraic equations 38
3.5 The open box problem 39
3.6 The problem of inflation 40
3.7 Refining the method of solution 41
3.8 The field problem 42

Chapter 4 – GRAPHING BY COMPUTER

4.1 Text characters 47
4.1.1 Direct commands 48
4.1.2 Cursor control 49
4.1.3 Poking to the screen 49
4.2 Teletext characters 50
4.3 High-resolution plotting 52
4.4 A sine curve – some examples of plotting 53
4.5 General techniques for plotting 55

Chapter 5 – MATRICES AND VECTORS

5.1 Input, output and storage of a matrix 60
5.2 To multiply a vector by a matrix 62
5.3 To multiply a matrix by another matrix 65
5.4 To invert a matrix 66

Chapter 6 – COMPUTER GEOMETRY

6.1 Polygons, circles and ellipses 72
6.1.1 Polygons 74
6.1.2 Circles and ellipses 75
6.1.3 Efficiency 77
6.2 Lines and vectors 79
6.2.1 Broken lines 80
6.2.2 Bezier curves 81
6.2.3 Clipping 82
6.3 3D representation 85
6.3.1 Data structure 86
6.3.2 Projections 87
6.3.3 Transformations 90
6.4 Reflections 91

Chapter 7 – LOGIC AND COMPUTERS

7.1 Computer logic 93
7.2 Truth tables 94
7.3 Sets and set logic 95

Chapter 8 – STATISTICS

8.1 The mean 100
8.2 Standard deviation 101

8.3 Bivariate date – Pearson product moment correlation 103
8.4 Regression line 105
8.5 Spearman's rank correlation coefficient 107
8.6 Binomial probability distribution 110
8.7 Exploring the effect of class size when graphing a set of data 113

Chapter 9 – RANDOMNESS, PROBABILITY AND SIMULATION

9.1 What is a random number? 116
9.1.1 Mid-square technique 117
9.1.2 Mid-product method 118
9.1.3 Lehmer congruence method 118
9.2 Random numbers in BASIC 118
9.3 Simulating dice 119
9.4 Monte Carlo methods 119
9.5 Markov chains 120
9.6 Sampling from a distribution 122
9.7 Sampling from standard distributions 126
9.7.1 Standard normal distribution 127
9.7.2 Negative exponential distribution 127
9.7.3 Poisson distribution 128
9.7.4 Chi-squared distribution 128
9.8 Using distributions 129

Chapter 10 – INTERNAL NUMBER REPRESENTATION AND COMPUTER ACCURACY

10.1 Numbers in a computer 130
10.2 Hexadecimal numbers 131
10.3 Errors in calculation 133
10.4 Numerical integration with an increasing number of strips 134
10.5 Finding a differential from first principles 135
10.6 Square roots and squaring 135

Chapter 11 – SEQUENCES AND LIMITS

11.1 Recurrence relations 137
11.2 The Yum-Yum ice cream company 139
11.3 The limit of a function 140
11.4 The limit of a function as $x \to \infty$ 142
11.5 The tortoise and the hare 142
11.6 The sum of an infinite series 143
11.7 The binomial series 145
11.8 The exponential series 146
11.9 The logarithmic series 146
11.10 The sine and cosine series 148
11.11 The natural logarithm function 149

Chapter 12 – INTRODUCING CALCULUS

12.1 The slope of the graph of a function 151
12.2 The slope of a curve at a given point 152
12.3 The area under a graph 155

Chapter 13 – NUMERICAL TECHNIQUES

13.1 The solution of equations of one variable by interval 158
13.2 The secant method. 162
13.3 The Newton–Raphson method 163
13.4 Sets of simultaneous linear equations. 165
13.5 Numerical integration to find the area under the graph of a function – trapezium rule 170
13.6 Numerical integration by Simpson's rule 172

Chapter 14 – APPROXIMATING FUNCTIONS

14.1 Difference tables 176
14.2 Chebychev polynomials 181
14.3 B-splines 184

Chapter 15 – NUMERICAL INVESTIGATIONS

15.1 Number chains 190
15.2 Chains of last digits 193
15.3 The decimal representation of fractions 194
15.4 Pythagorean triads 196

Chapter 16 – PROBLEM SOLVING

16.1 Digit swapping 199
16.2 The smallest number with T divisors 202
16.3 The magic square revisited. 206
16.4 A square shuffle 209
16.5 Ackermann steering 220

Chapter 17 – TRANSFORMATION GEOMETRY

17.1 The coordinate system and drawing the axes. 223
17.2 Inputting a shape. 225
17.3 Offering a choice of transformation. 226
17.4 Translation. 226
17.5 Reflection 227
17.6 Rotation 231
17.7 Enlargement 231
17.8 Presenting the image then estimating the transformation 235

Chapter 18 – WRITING MATHEMATICAL SOFTWARE

18.1 The initial idea 239
18.2 Problem analysis 239
18.3 Writing the program 241
18.4 Random number generation 243
18.5 Dealing with a poor estimate 243
18.6 Menu to offer choice of expression 245
18.7 Using the program 246
18.8 Program writing in general 247

Chapter 19 – USING COMPUTERS IN SCHOOLS

19.1 Some current approaches 251
19.1.1 Individual learning 251
19.1.2 Testing and improving skills 252
19.1.3 Specific teaching aids 252
19.1.4 Generalised test-beds 252
19.1.5 Mathsworlds 252
19.1.6 Classroom practice 253
19.2 Organisation 253
19.3 Resources 253
19.3.1 Hardware 254
19.3.2 Materials 255
19.3.3 Software 255
19.4 Range of ability 256
19.5 Departmental activities 256
19.6 Staff 257
19.7 Help 258
19.8 Curriculum 259
